DIGITAL PROJECTION

TITAN HD-500, HD-250

High Brightness Digital Video Projector
16:9 widescreen display

User Manual

106-618B

Declaration of Conformity

Directives covered by this Declaration

89/336/EEC Electromagnetic Compatibility Directive, amended by **92/31/EEC** and **93/68/EEC**.

73/23/EEC Low Voltage Equipment Directive, amended by **93/68/EEC**.

Products covered by this Declaration

Large screen video projector type	*The CE mark was first applied in:*
TITAN HD-500	July 2006

Basis on which Conformity is being declared

The products identified above comply with the protection requirements of the above EU directives, and the manufacturer has applied the following standards.

EN 55022:1998 - Limits and Methods of Measurement of Radio Disturbance Characteristics of Information Technology Equipment.

EN 55024:1998 - Limits and Methods of Measurement of Immunity Characteristics of Information Technology Equipment.

EN 55103:1997 - Product family Standard for Audio, Video, Audio-Visual and Entertainment Lighting Control apparatus for Professional Use.

EN 60950:2000 - Specification for Safety of Information Technology Equipment, including Electrical Business equipment.

The technical documentation required to demonstrate that the products meet the requirements of the Low Voltage directive has been compiled by the signatory below and is available for inspection by the relevant enforcement authorities.

Signed: 

Authority: D.J. Quinn, Product Development Director

Date: 28 July 2006

Attention!

The attention of the specifier, purchaser, installer, or user is drawn to special measures and limitations to use which must be observed when these products are taken into service to maintain compliance with the above directives. Details of these special measures are available on request, and are also contained in the product manuals.

Important Information

Please read this user manual carefully before using the projector, and keep the manual handy for future reference.

A serial number is located on the side of the projector. Record it here:

Symbols used in this guide

Warnings

ELECTRICAL WARNING: this symbol indicates that there is a danger of electrical shock unless the instructions are closely followed.

WARNING: this symbol indicates that there is a danger of physical injury to yourself and/or damage to the equipment unless the instructions are closely followed.

NOTE: this symbol indicates that there is some important information that you should read.

Trademarks

- IBM is a registered trademark of International Business Machines Corporation.
- Macintosh and PowerBook are registered trademarks of Apple Computer, Inc.
- Other product and company names mentioned in this user's manual may be the trademarks of their respective holders.

Product revision

- Because we at Digital Projection continually strive to improve our products, we may change specifications and designs, and add new features without prior notice. Projectors built prior to this revision of the User Manual may therefore not include all the features described.

Manual revision

Date	Description	Revision

General precautions

Do not open the cabinet. There are no user serviceable parts inside.

Use only the power cable provided.

Ensure that the power outlet includes a Ground connection, as this equipment MUST be earthed.

Take care to prevent small objects such as paper or wire from falling into the projector. If this does happen, switch off immediately, and have the objects removed by authorised service personnel.

Do not expose the projector to rain or moisture, and do not place any liquids on top of the projector.

Unplug before cleaning, and use a damp, not wet, cloth.

Do not touch the power plug with wet hands.

Do not touch the power plug during a thunder storm.

Handle the power cable carefully and avoid sharp bends. Do not use a damaged power cable.

There are no user-serviceable parts inside the lamp module. The whole module should be replaced.

Take care when removing the lamp module.

NEVER touch the lamp or reflector.

Take care not to touch the glass surface of the lamp module. If you do accidentally touch the glass, it should be cleaned before use. (see section 5. Maintenance.)

Do not use the lamp for more than 1500 hours, as this may cause serious lamp failure, damage the lamp module and cause extra cost on replacement.

HID lamps produce high intensity light. Do not look directly at the light coming from the lamp housing, or the lens, or allow items such as magnifying lenses to be placed in the light path. This could result in serious eye damage.

Do not touch the ventilation outlets, as they will become hot in use.

Do not cover or obstruct the ventilation outlets or inlets.

Do not cover the lens whilst the projector is switched on. This could cause a fire

Always allow the projector to cool for 5 minutes before disconnecting the power, moving the projector or changing the lamp.

Never use strong detergents or solvents such as alcohol or thinners to clean the projector and lens.

Notes

Installation precautions

Connect the LAN cable only to a computer LAN connection. Other similar connectors may have a dangerously high voltage source.

The projector must be installed only by suitably qualified personnel, in accordance with local building codes.

The projector should be installed as close to the power outlet as possible.

The power connection should be easily accessible, so that it can be disconnected in an emergency.

Ensure that there is at least 30cm (12in) of space between the ventilation outlets and any wall, and 10cm (4in) on all other sides.

Do not install the projector close to anything that might be affected by its operational heat, for instance, polystyrene ceiling tiles, curtains etc.

The projector weighs approximately 27 kg (50 lbs). Use safe handling techniques when lifting the projector.

When stacking projectors, the stack MUST be vertical, to ensure that the stresses are distributed to all frame couplings.

Before installation, make sure that the surface, ceiling or rigging that is to support the projector is capable of supporting the combined weight of the projector and lens (see specification for exact weights)**.**

Separate backup safety chains or wires should always be used for each projector.

Do not place heavy objects on top of the projector chassis. Only the chassis corners and the rigging frame are capable of withstanding the weight of another projector.

Do not stack more than 3 projectors.

Do not drop or jarr the projector.

Place the projector in a dry area away from sources of dust, moisture, steam, smoke, sunlight or heat.

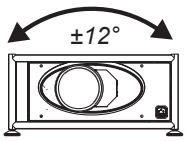
Do not tilt the projector more than ±12° from side to side when in use, as this may cause serious lamp failure, damage the lamp module and cause extra cost on replacement. The projector my be tilted forwards and backwards as necessary.

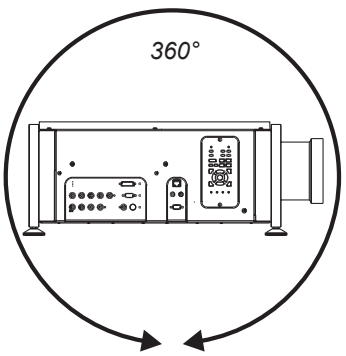
Operation and configuration precautions

Do not make changes to the networking configuration unless you understand what you are doing, or have taken advice from your Network Manager. If you make a mistake, it is possible that you will lose contact with the projector. Always double-check your settings before pressing the APPLY button. Always keep a written note of the original settings, and any changes you have made.

Software update should NOT be carried out except by, or with the supervision of, Digital Projection Service personnel.

Notes





Compliance with international standards

Noise

GSGV Acoustic Noise Information Ordinance

The sound pressure level is less than 70 dB (A) according to ISO 3744 or ISO 7779.

RF Interference

FCC

The Federal Communications Commission does not allow any modifications or changes to the unit EXCEPT those specified by Digital Projection in this manual. Failure to comply with this government regulation could void your right to operate this equipment.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment contains an FCC approved RF transmitter module with FCC ID: R68WIPORT.

European Waste Electrical and Electronic Equipment (WEEE) Directive

Digital Projection Ltd is fully committed to minimising Waste Electrical and Electronic Equipment. Our products are designed with reuse, recycling and recovery of all components in mind. To this end, at end of life, your projector may be returned to Digital Projection Ltd or its agent so that the environmental impact can be minimised.

Key features of the projector

Congratulations on your purchase of the Digital Projection Titan HD-500 or HD-250 projector.

Digital Projection International, Texas Instruments' first DLP™ partner and the original innovator of the 3-chip DLP™ projector, proudly introduces the Titan HD. Incredibly bright, high resolution and high in contrast, the Titan HD offers a radically new electronics configuration ideally suited for the staging and large-venue permanent installation markets.

The Titan HD harnesses the power of the Texas Instruments' 1280 x 720 pixel HPO DMD's™. Alongside the LIGHTNING and HIGHlite Pro, the Titan HD is to set new standards for Staging and is destined to be the first choice of professionals who stage prestigious events such as the Grammy® Awards and the Oscars®. With a contrast of up to 4000:1 and awe-inspiring brightness of up to 4500 lumens, the Titan HD is unmatched for applications as diverse as world class staged events, commercial entertainment, major outdoor venues, large-scale simulation, gaming, home theatre and houses of worship.

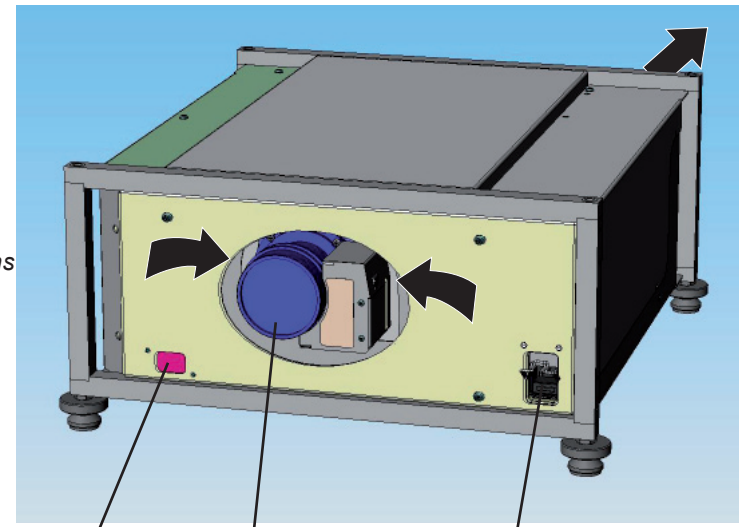
Key Features

- High resolution, large venue projector
- Applications: Large Screen; Fixed install and Rental
- HD-500: 4,500 ANSI lumens ±20%
  HD-250: 1,600 ANSI lumens ±10%
- HD-500: Contrast >1200:1 ±10%
  HD-250: Contrast >4000:1 ±10%
- 1280 x 720 resolution
- Precision mechanical design ensuring maximum amount of light from lamp housing reaches optics, without any operator adjustment
- HD-500: 750W single phase, 100-240VAC
  HD-250: 500W single phase, 100-240VAC
- Compact size, light weight - approximately 27 kg (50 lbs)
- Motorised lens mount
- Optional Rigging frame with Quick-lock stack system- 3 point pitch & roll adjustment for accurate alignment
- Ruggedised robust metal case
- LAN & RS232 connection for network operation
- Six selectable Digital and Analogue Video inputs for display of the latest as well as legacy video standards.
- DVI, RGBHV, Component, S-Video, Composite all as standard
- Wi-fi connection wireless remote control
- IR/cable remote control for easy setup
- LAN operation using control codes or Integrated Userware

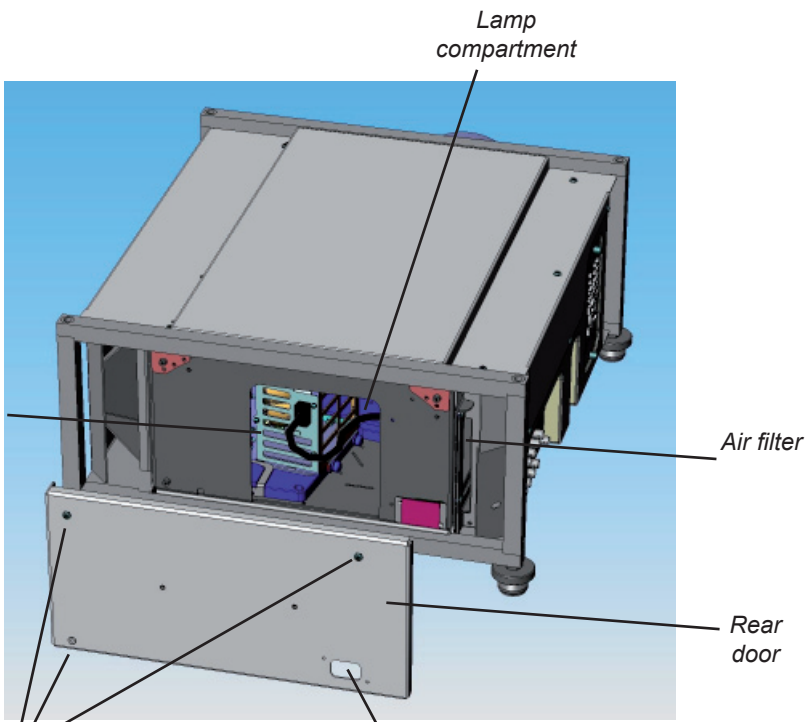
Notes

Getting to know the projector

Front panel, – lens and power



Rear panel – lamp and air filter

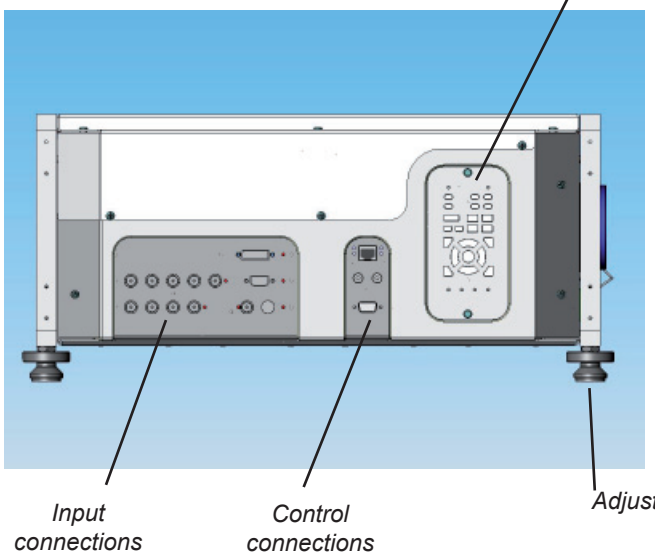


Notes

For more detailed information about lenses, see **section 2. Installation**

For information about how to change the lamp or the filter, see ***section*** **6. Maintenance**.

Side panel – connection and control



Notes

For information about how to connect the projector, see **Connecting the projector** *in section* **2. Installation**, *and* ***Connections*** *in section* ***7. Appendix***.

For information about how to use the control panel, see section **4. Controlling the projector**.

For information about how to mount and stack projectors, see section **2. Installation**.

2. Installation
Contents

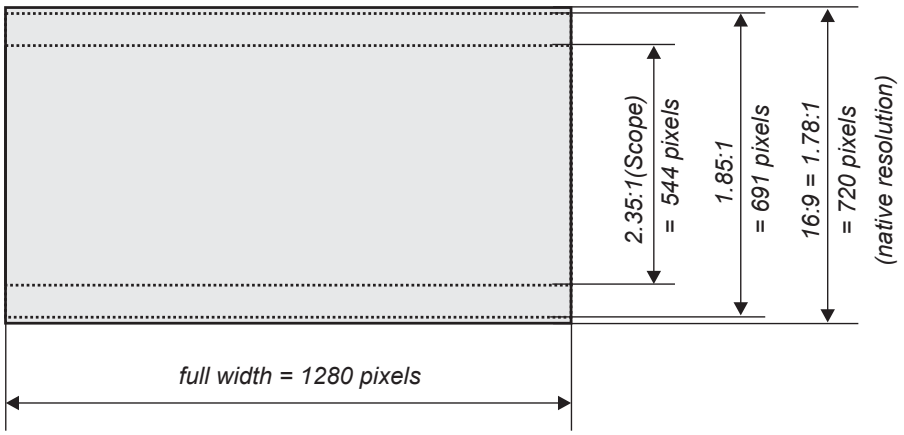
Screen requirements

Aspect ratio

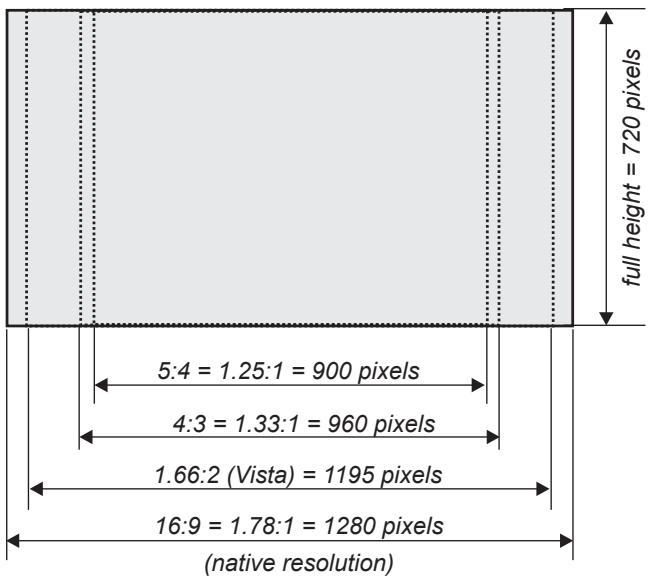
Fitting the image to the DMD

If the source image supplied to the projector is smaller than 1280 x 720 pixels, then the image will not fill the DMD. The following example shows how a number of common formats may be displayed.

Images displayed full width



Images displayed full height



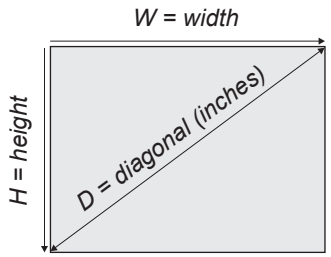
Notes

The images are shown here scaled automatically by the projector.

The image may be scaled differently if the Aspect Ratio is set differently in the Picture or Geometry menus.

Diagonal screen sizes

Screen sizes are sometimes specified by their diagonal size (D) in inches. When dealing with large screens and projection distances at different aspect ratios, it is more convenient to measure screen width (W) and height (H).



The example calculations below show how to convert diagonal sizes in inches into width and height, at various aspect ratios.

2.35:1 (Scope)
W = D x 0.92in (D x .023m) ***H*** = D x 0.39in (D x .01m)

1.85:1
W = D x 0.88in (D x .022m) ***H*** = D x 0.47in (D x .012m)

16:9 = 1.78:1 (native aspect ratio)
W = D x 0.87in (D x .022m) ***H*** = D x 0.49in (D x .0125m)

1.66:1 (Vista)
W = D x 0.86in (D x .022m) ***H*** = D x 0.52in (D x .013m)

4:3 = 1.33:1
W = D x 0.8in (D x .02m) ***H*** = D x 0.6in (D x .015m)

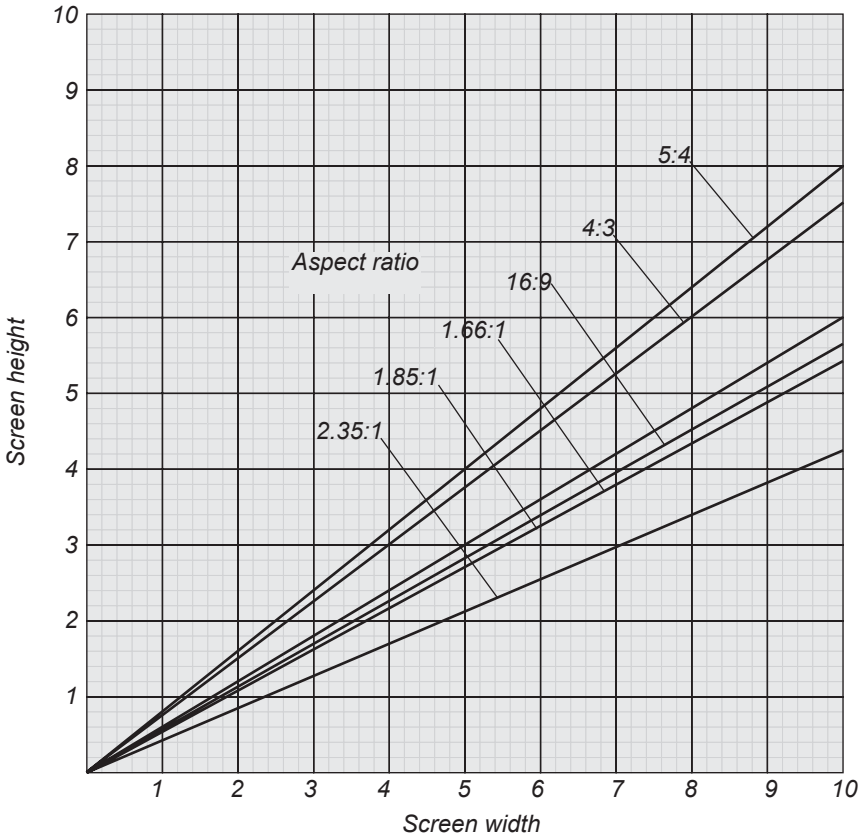
5:4 = 1.25:1
W = D x 0.78in (D x .02m) ***H*** = D x 0.625in (D x .016m)

Notes

Fitting the image to the screen

It is important that your screen is of sufficient height and width to display images at all the aspect ratios you are planning to use.

Use the conversion chart, or the sample calculations below to check that you are able to display the full image on your screen. If you have insufficient height or width, you will have to reduce the overall image size in order to display the full image on your screen.



2.35:1 (Scope)
W = H x 2.35 ***H*** = W x 0.426

1.85:1
W = H x 1.85 ***H*** = W x 0.54

16:9 = 1.78:1 (native aspect ratio)
W = H x 1.78 ***H*** = W x 0.56

1.66:1 (Vista)
W = H x 1.66 ***H*** = W x 0.6

4:3 = 1.33:1
W = H x 1.33 ***H*** = W x 0.75

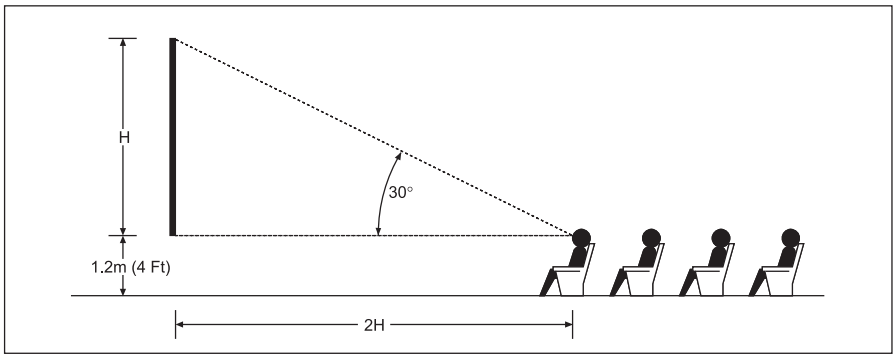
5:4 = 1.25:1
W = H x 1.25 ***H*** = W x 0.8

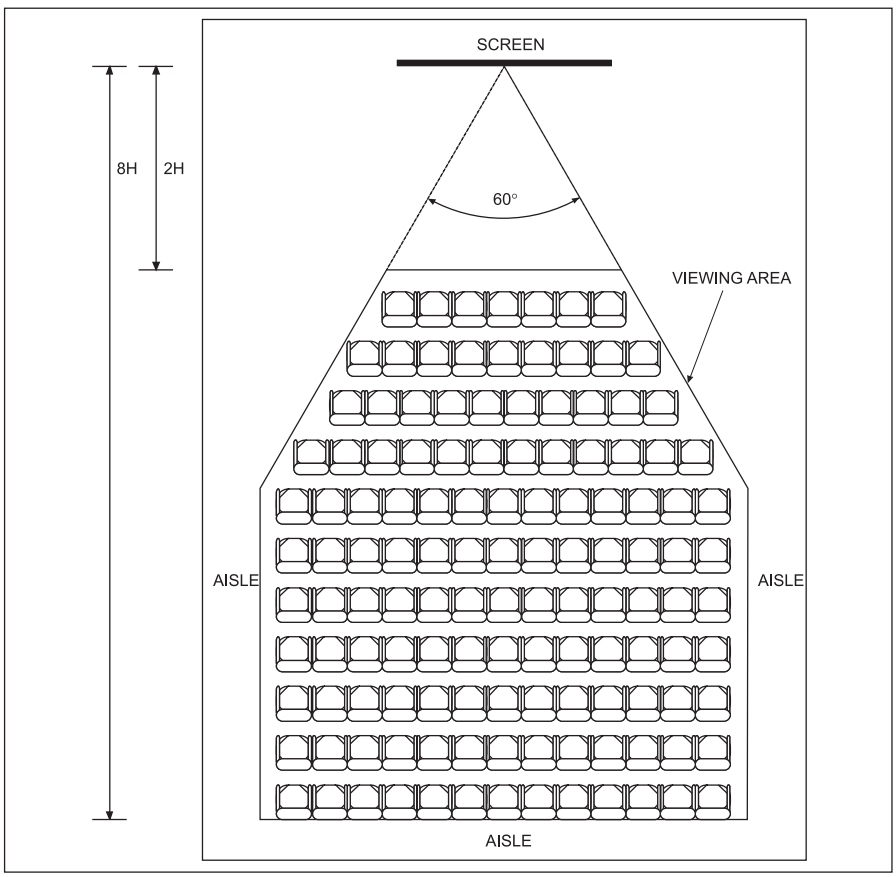
Notes

Positioning the screen and projector

For optimum viewing, the screen should be a flat surface perpendicular to the floor. The bottom of the screen should be 1.2m (4 feet) above the floor and the front row of the audience should not have to look up more than 30° to see the top of the screen.

The distance between the front row of the audience and the screen should be at least twice the screen height and the distance between the back row and the screen should be a maximum of 8 times the screen height. The screen viewing area should be within a 60° range from the face of the screen.





Notes

The projector should be installed as close to the power outlet as possible.

The power connection should be easily accessible, so that it can be disconnected in an emergency.

Ensure that there is at least 30cm (12in) of space between the ventilation outlets and any wall, and 10cm (4in) on all other sides.

Do not install the projector close to anything that might be affected by its operational heat, for instance, polystyrene ceiling tiles, curtains etc.

The image can be flipped for rear projection (see ***section 4. Using the menus****,* ***Image menu****) and displayed without the need for extra mirrors or equipment.*

However, you must ensure that there is sufficient distance behind the screen for the projector to be correctly located.

Rear installation is generally more complicated and advice should be sought from your local dealer before attempting it.

Choosing a lens

A number of lenses are available for use with the projector. Which lens you choose will depend on the screen size, image aspect ratio, projection distance and light output.

The lenses available and their part numbers are listed below:

	High Brightness	High Contrast
0.63 : 1 fixed lens	001-734	102-373
0.96 : 1 fixed lens	001-735	102-835
1.2 - 1.44 : 1 zoom lens	001-736	102-374
1.44 - 1.8 : 1 zoom lens	001-737	102-375
1.8 - 2.4 : 1 zoom lens	001-738	102-376
2.4 - 3.6 : 1 zoom lens	001-739	102-377
3.6 - 5.6 : 1 zoom lens	001-740	102-378

If you are simply connecting the output of a camera or computer directly to the projector, then the image size (in pixels) may well be fixed. If, however, you are using commercially available image processing equipment, such as the Digital Projection VIP1000, you may be able to resize the image to fit the DMD.

If the image does not fill the full width of the DMD, this effectively increases the throw ratio of the lens. This can be corrected for by applying a Throw ratio factor.

Method one: using the lens charts

For the screen sizes listed below, use the charts on the following pages, to choose the most suitable lens.

Full width images, including:

2.35:1 (Scope) 1280 x 544 pixels

1.85:1 1280 x 691 pixels

16:9 = 1.78:1 1280 x 720 pixels (native resolution)

Full height images

A Throw ratio factor (TRF) has been applied to the following charts:

1.66:1 (Vista)	1195 x 720 pixels	TRF = 1.07
4:3 = 1.33:1	960 x 720 pixels	TRF = 1.33
5:4 = 1.25:1	900 x 720 pixels	TRF = 1.42

Method two: by calculation

See the calculations, on the page immediately following the lens chart.

Notes

The High Brightness lenses are recommended for the HD-500, for maximum light output.

The High Contrast lenses are recommended for the HD-250, for maximum contrast.

For more information about Throw ratio factor (TRF), see **Useful lens calculations***, later in this section.*

Choosing a lens using the lens charts

Use the charts on this page and on the following pages to choose which lens best suits your application.

Notes

This chart has a TRF of 1.0, for use with the following images:

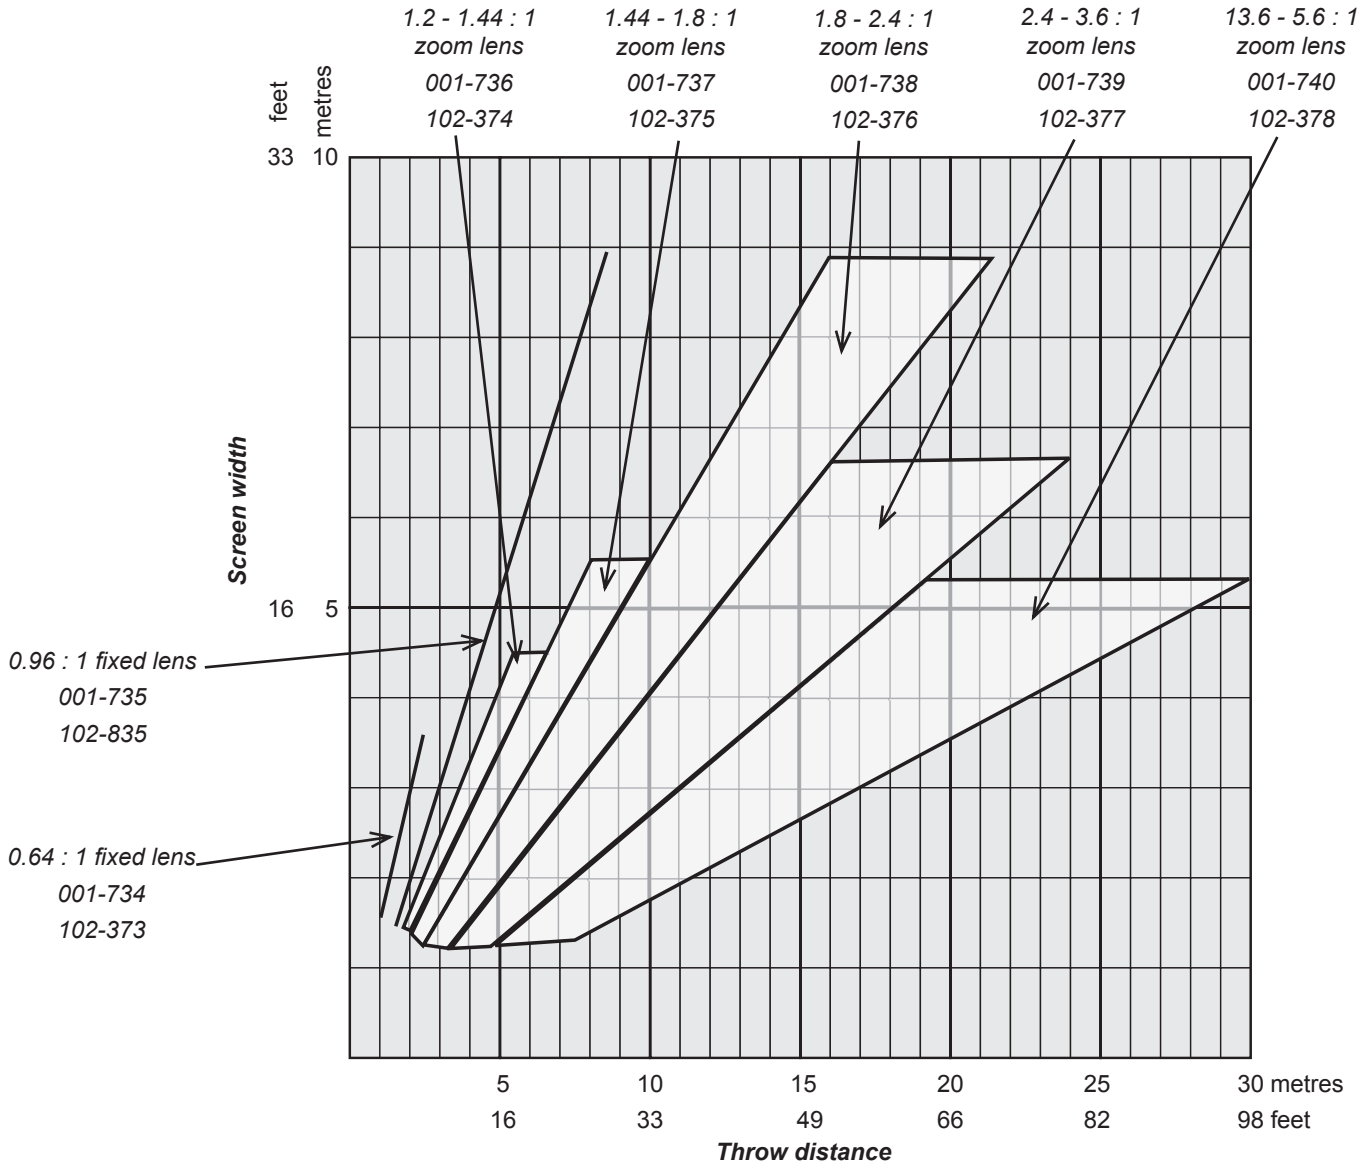
2.35:1 (Scope), 1.85:1 and 16:9

Full width images, including 2.35:1, 1.85:1 and 16:9 (native resolution)

example

- For a screen width of 6m at a distance of 13m, the 1.8 - 2.4: 1 zoom lens would be best suited.
- For the same screen size at a distance of 18m, the 2.4 - 3.6: 1 zoom lens would be best suited.

if you need to be more precise, then use the calculations on the page immediately following the lens charts.



Lens charts continued

Notes

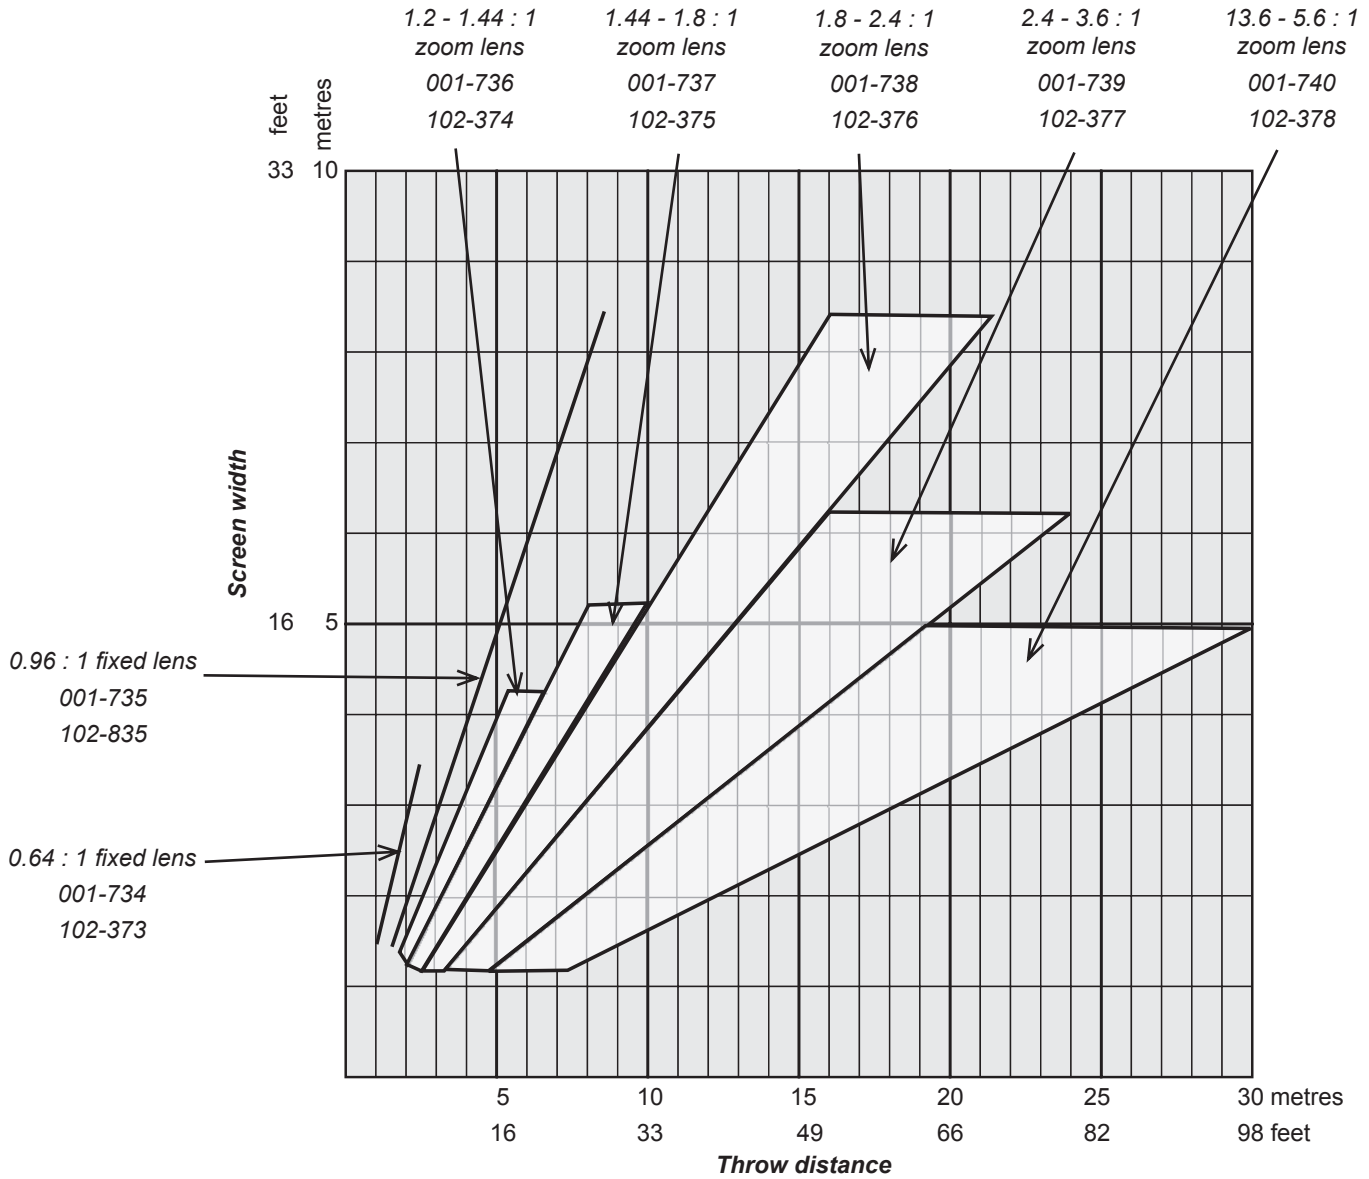
This chart has a TRF of 1.07, for use with the following images:

1.66:1 (Vista)

Full height image 1.66:1 (Vista)

Use the chart below to choose which lens best suits your application.

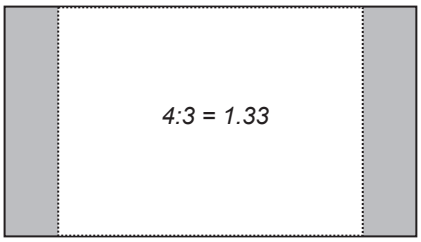
if you need to be more precise, then use the calculations on the page immediately following the lens charts.



Lens charts continued

Notes

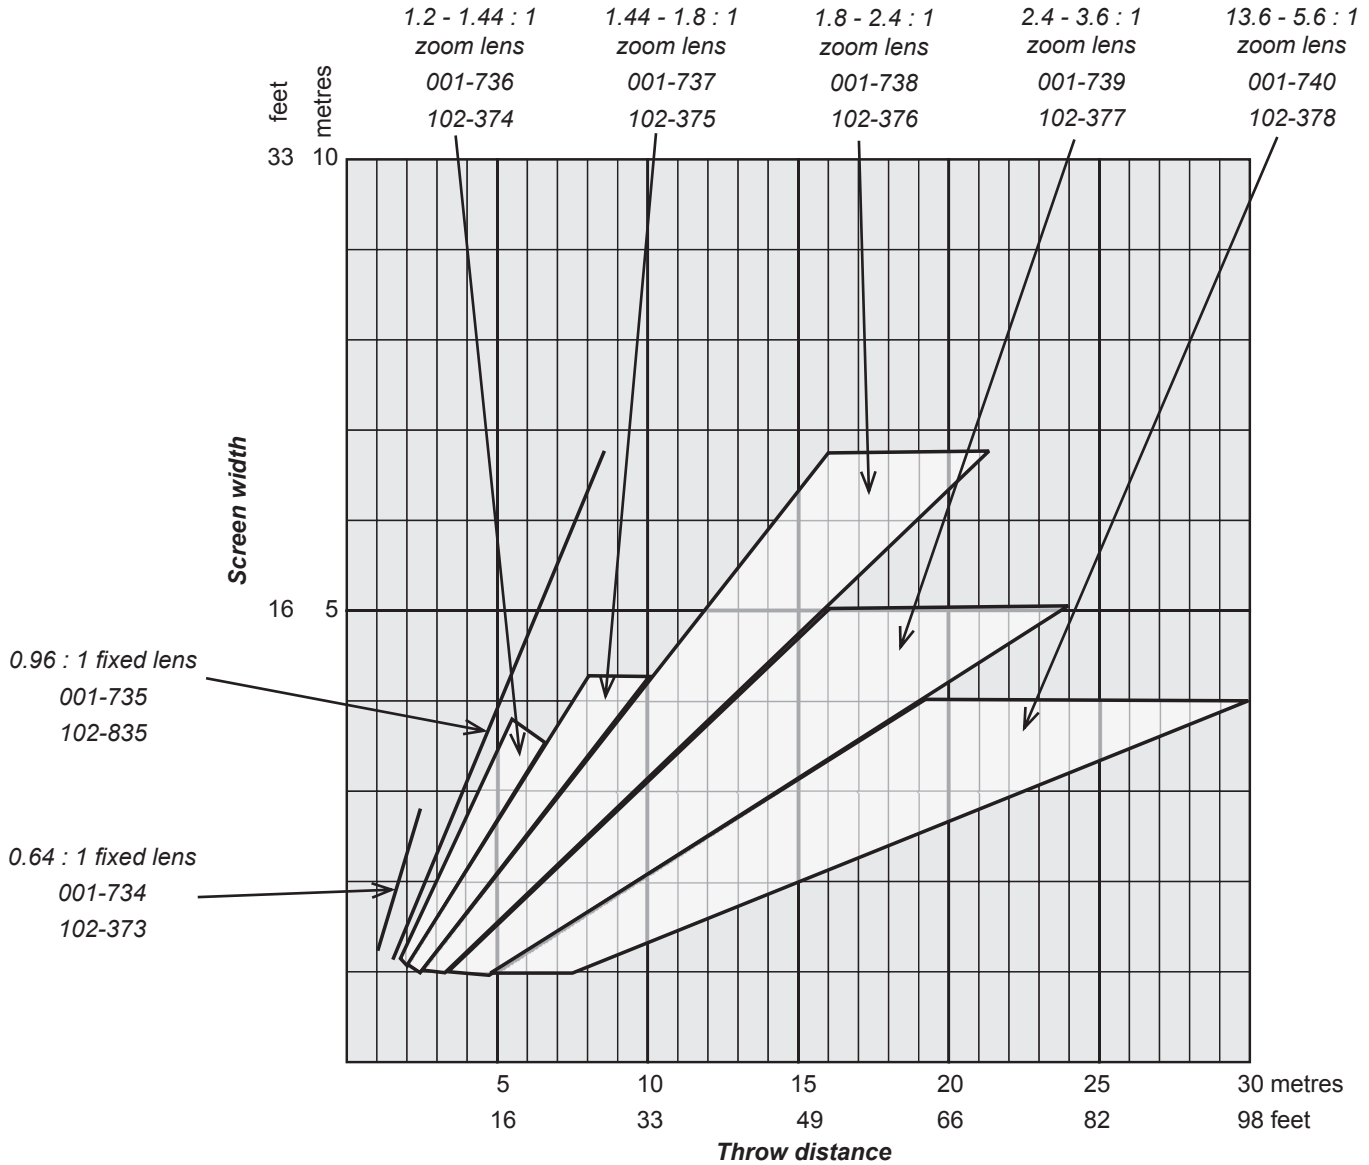
This chart has a TRF of 1.33, for use with the following images:



Full height image 4:3

Use the chart below to choose which lens best suits your application.

if you need to be more precise, then use the calculations on the page immediately following the lens charts.



Lens charts continued

Notes

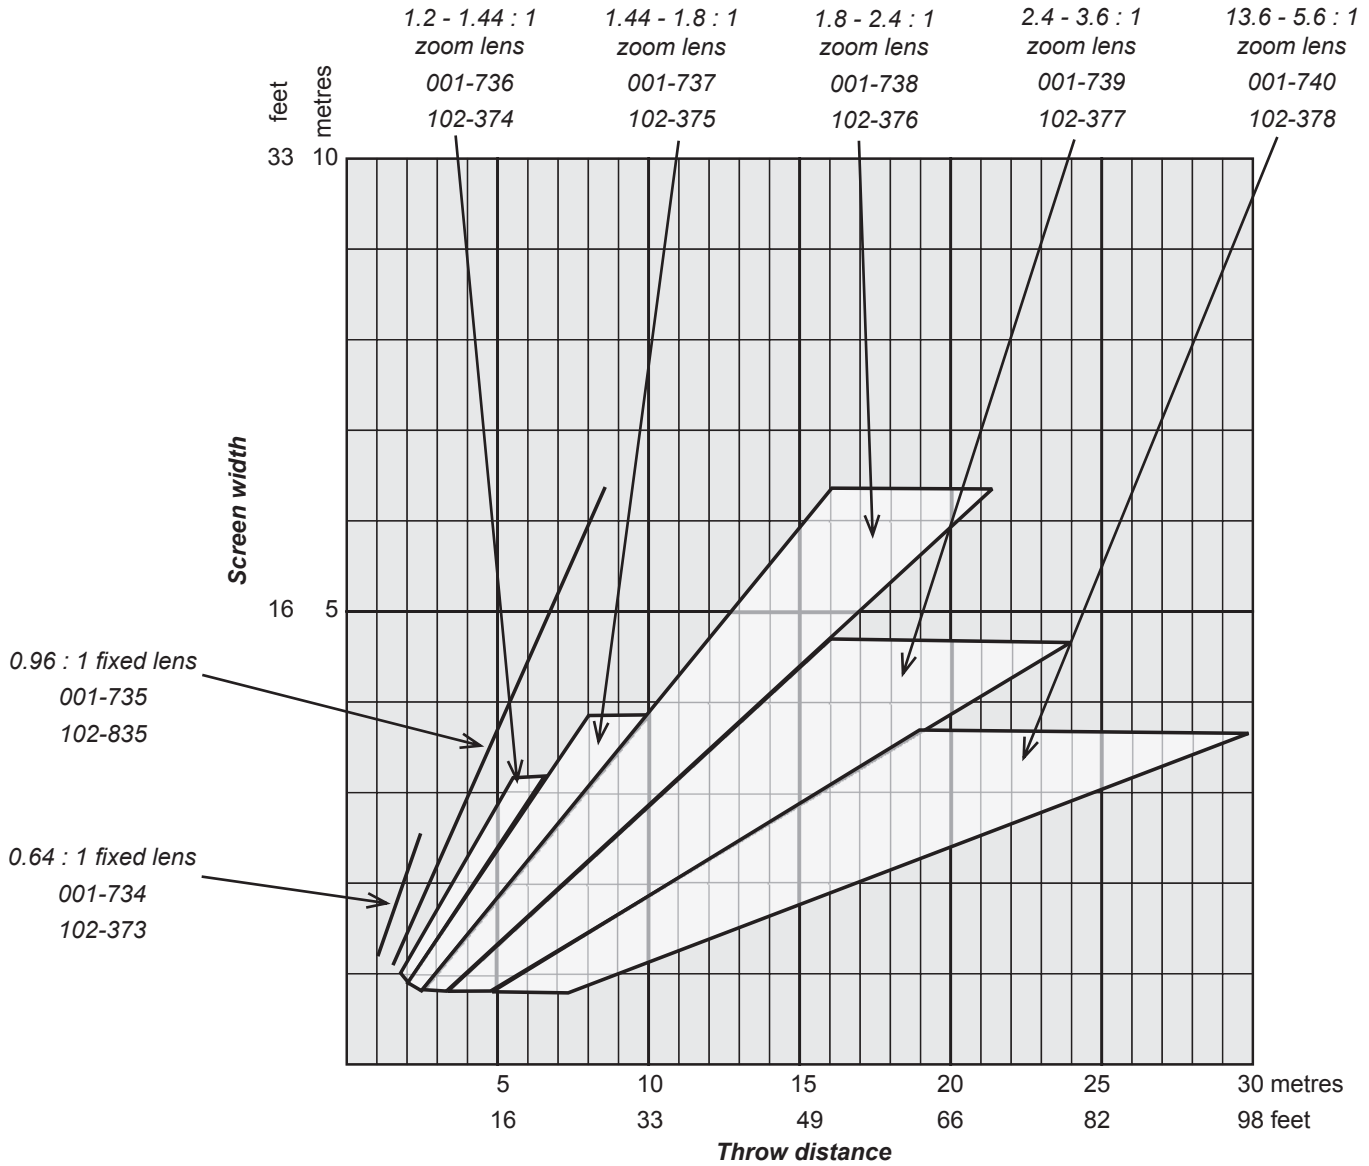
This chart has a TRF of 1.42, for use with the following images:

5:4 = 1.25

Full height image 5:4

Use the chart below to choose which lens best suits your application.

if you need to be more precise, then use the calculations on the page immediately following the lens charts.



Choosing a lens by calculation

For any screen size not listed above, or if you need to be more precise, then use the calculations below.

- Identify actual width of the image in pixels.
- Calculate the Throw Ratio Factor: TRF = DMD width (1280) / Image width in pixels
- Identify the screen width required.
- Identify the throw distance required.

  Throw distance calculations are based on the distance from the outer end of the lens, which will vary from lens to lens. Once a lens has been chosen, the figures can be checked using the lens extension values given on the next page.

- Calculate the throw ratio required. Throw ratio = Throw distance / Screen width x TRF
- Choose a lens with the required throw ratio.

  *Check from the lens charts or the specification (see **section 7. Appendix**), that the lens chosen has a sufficient throw range.*

example

- An image, 1024 x 768 pixels, screen width 6.5m, throw distance 18m from the outer end of the lens.
- Throw Ratio Factor (TRF) = 1280 / 1024 = 1.25
- Throw ratio required = 18 / 6.5 x 1.25 = 2.22
- Choose the 1.8 - 2.4 zoom lens.

Notes

The Throw ratio for a particular lens is fixed, and assumes that the image fills the width of the DMD.

For images that do not fill the width of the DMD, the Throw ratio is effectively increased. To correct for this, a Throw Ratio Factor (TRF) is used.

The lenses available and their part numbers are listed below:

High Brightness	
0.63 : 1 fixed lens	*001-734*
0.96 : 1 fixed lens	*001-735*
1.2 - 1.44 : 1 zoom lens	*001-736*
1.44 - 1.8 : 1 zoom lens	*001-737*
1.8 - 2.4 : 1 zoom lens	*001-738*
2.4 - 3.6 : 1 zoom lens	*001-739*
3.6 - 5.6 : 1 zoom lens	*001-740*
High Contrast	
0.63 : 1 fixed lens	*102-373*
0.96 : 1 fixed lens	*102-835*
1.2 - 1.44 : 1 zoom lens	*102-374*
1.44 - 1.8 : 1 zoom lens	*102-375*
1.8 - 2.4 : 1 zoom lens	*102-376*
2.4 - 3.6 : 1 zoom lens	*102-377*
3.6 - 5.6 : 1 zoom lens	*102-378*

Useful lens calculations

The following lens calculations may be useful:

Throw ratio = Throw distance / Screen width

Throw ratio factor (TRF) = DMD width in pixels / image width in pixels = 1280 / image width in pixels

Therefore:

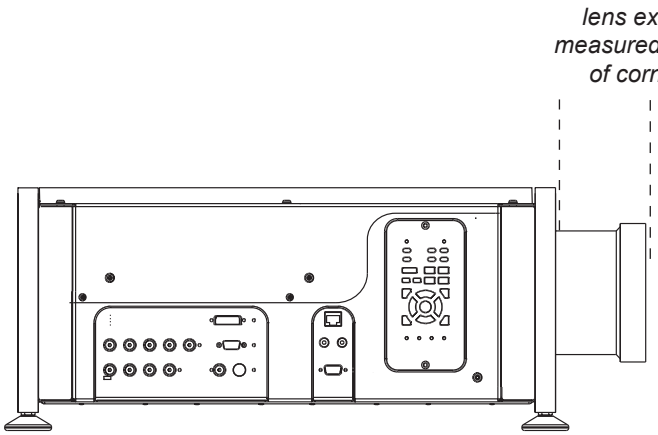
Screen width = Throw distance / Throw ratio x TRF

Throw distance = Screen width x Throw ratio x TRF

Lens extension

The throw distance calculated above is to the outer end of the lens. For each lens, the nominal distance between the front of the projector and the outer end of the lens (lens extension) will be as listed below.

	High Brightness	High Contrast	Lens extension
0.63 : 1 fixed lens	001-734	102-373	100 mm (3.9 in)
0.96 : 1 fixed lens	001-735	102-835	75 mm (3.0 in)
1.2 - 1.44 : 1 zoom lens	001-736	102-374	47 mm (1.8 in)
1.44 - 1.8 : 1 zoom lens	001-737	102-375	1 mm (0.1 in)
1.8 - 2.4 : 1 zoom lens	001-738	102-376	5 mm (0.2 in)
2.4 - 3.6 : 1 zoom lens	001-739	102-377	5 mm (0.2 in)
3.6 - 5.6 : 1 zoom lens	001-740	102-378	12 mm (0.5 in)



Notes

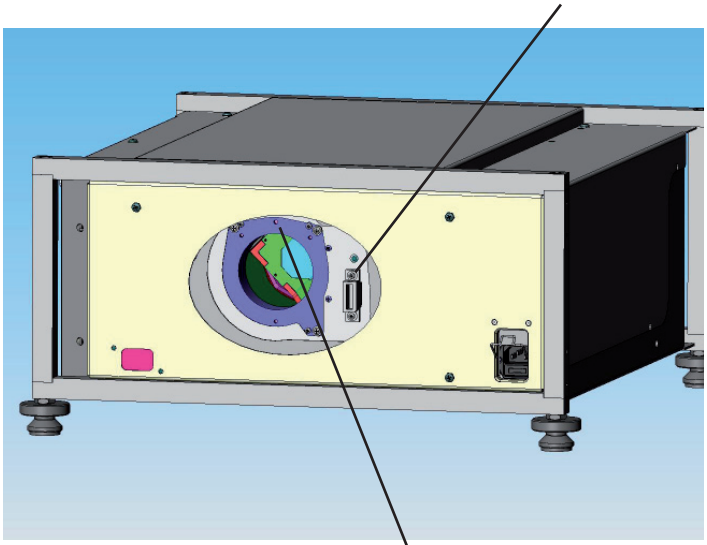
The Throw ratio for a particular lens is fixed, but assumes that the image fills the width of the DMD.

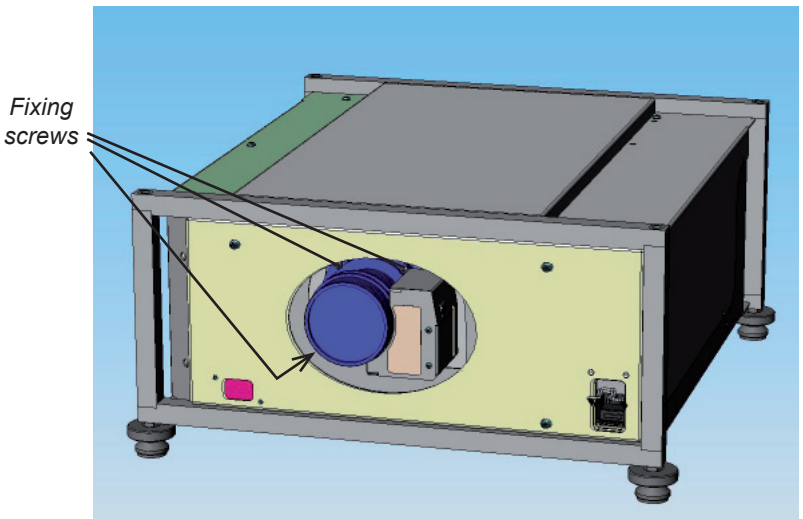
For images that do not fill the width of the DMD, the Throw ratio is effectively increased. To correct for this, a Throw Ratio Factor (TRF) is used.

Lens extension is measured when the lens is focused at infinity, and fully extended. At other focus settings, the extension could be up to 10mm less

Fitting the lens

- Remove the rear lens cap from the lens.
- Insert the lens into the lens mount with the connector to the right, taking care to line up the locating pin on the lens with the locating hole above the opening.
- Push the lens in firmly to engage the connector.
- Secure the lens using the three cross-head screws.





Notes

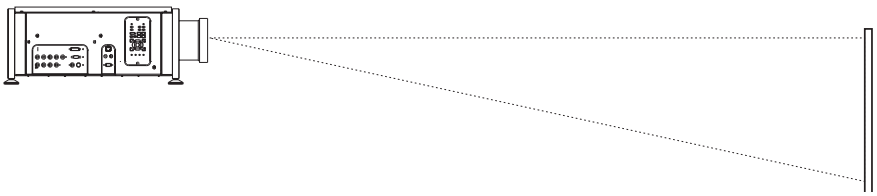
Make sure the rear lens cap is removed, before fitting the lens.

Make sure the front lens cap is removed, before switching on the projector.

Be careful not to scratch the lens surfaces. If you do accidentally touch a lens, then clean the surface using a lens paper.

Shifting the image

The normal position for the projector is at the centre of the screen. However, you can set the projector above or below the centre, or to one side, and adjust the image using the **Lens shift** feature to maintain a geometrically correct image.



- Any single adjustment outside the ranges specified below may result in an unacceptable level of distortion, paricularly at the corners of the image, due to the image passing through the periphery of the lens optics.
- If the lens is to be shifted in two directions combined, the maximum range without distortion will be somewhat less, as can be seen in the diagrams to the right.

The maximum range available with no distortion is dependent on which lens is used. The tables below show the maximum range for images that fill the DMD.

Fixed lenses

vertical (pixels)	*horizontal (pixels)*	*vertical (vs DMD height)*	*horizontal (vs DMD width)*
no shift possible			

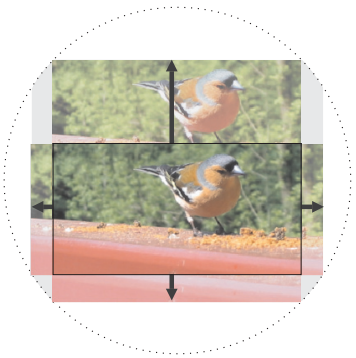
Zoom lenses

vertical (pixels)	*horizontal (pixels)*	*vertical (vs DMD height)*	*horizontal (vs DMD width)*
360 up 115 down	128 left 128 right	0.5H up 0.16H down	0.1W left 0.1W right

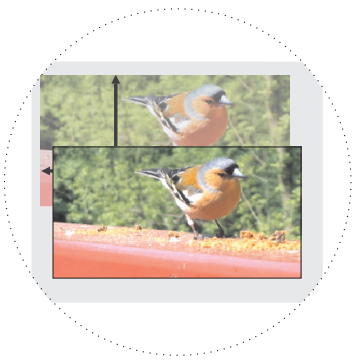
Notes

*For more information on using the Lens shift feature, see **section 4. Using the menus, Lens menu**.*

If the lens is to be shifted in two directions combined, the maximum range is somewhat less, as can be seen below. (zoom lens shift shown).



full horizontal and vertical shift without distortion



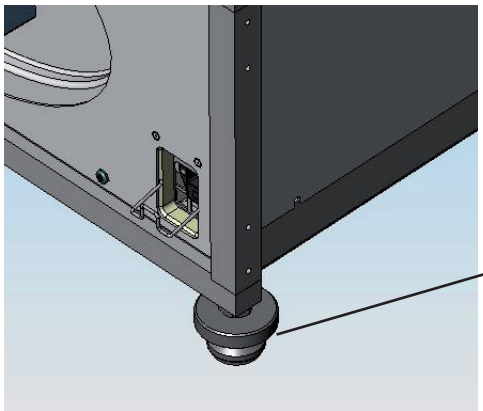
combined shift without distortion is reduced

Mounting the projector

The projector is designed to be used on a flat surface, but the optional rigging frame will allow it to be suspended from a lighting truss or rigging. The four adjustable feet under the chassis allow the projector to be lowered onto a flat surface without any danger of hands being trapped between the bottom frame and the surface.

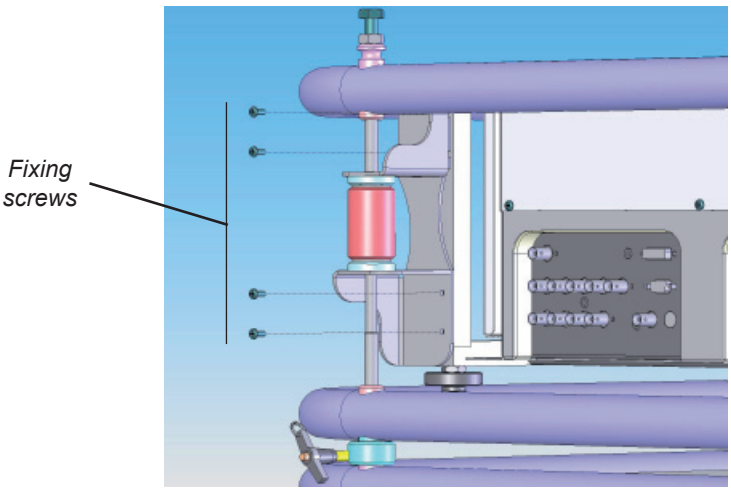
Chassis adjustment

If the projector is to be operated from a flat surface such as a projector table, then adjustment of projector level should be made by turning the four feet under the chassis.



Fitting the optional rigging frame

- The rigging frame should be secured to the projector using the twelve screws supplied, as shown in the pictures below. Four screws secure each of the threee adjuster brackets to its corner post. Fit the screws to the round holes first, then fit the screws to the oval holes.



- Before suspending the projector, make sure that all the frame adjusters are set roughly midway.

Notes

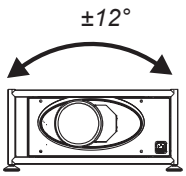
BEFORE INSTALLING THE PROJECTOR, READ ALL THE WARNINGS BELOW AND ALL THOSE IN *IMPORTANT INFORMATION* AT THE FRONT OF THIS MANUAL.

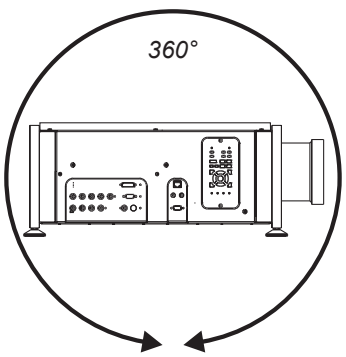
The projector weighs approximately 27 kg (50 lbs). Use safe handling techniques when lifting the projector.

Make sure that the surface, ceiling or rigging that is to support the projector is capable of supporting the combined weight of the projector and lens (see specification for weights)**.**

Backup safety chains or wires should always be used.

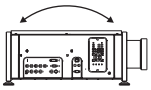
Do not tilt the projector more than ±12° from side to side when in use, as this may cause serious lamp failure, damage the lamp module and cause extra cost on replacement. The projector my be tilted forwards and backwards as necessary.



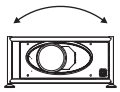


Adjusting the rigging frame

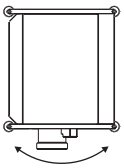
Coarse adjustment of projector level should be made by adjusting the length of the supporting wires or chains, or by adjusting the position of the truss or rigging. Once the initial coarse adjustment has been made, fine adjustment can be made by turning the frame adjusters on the rigging frame:



- The single vertical adjuster at the front left corner is used to raise or lower the front of the projector (pitch adjustment).

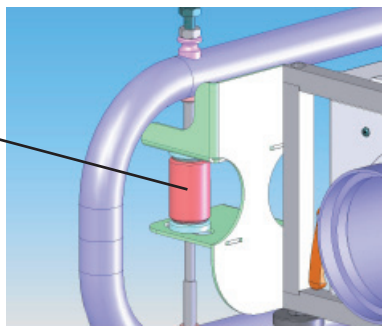


- The two vertical adjusters at the rear are used to rotate the projector around the lens axis (roll adjustment).

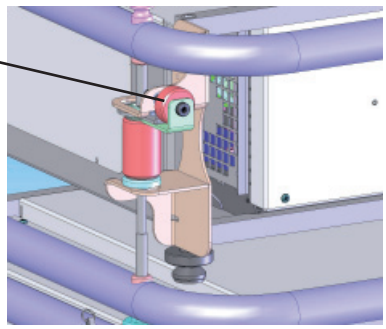


- The horizontal adjuster at the rear right corner (viewed from the front) is used to rotate the projector around its vertical axis (yaw adjustment).

Vertical adjuster



Horizontal adjuster



Notes

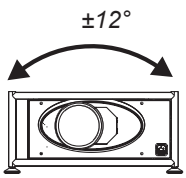
BEFORE INSTALLING THE PROJECTOR, READ ALL THE WARNINGS BELOW AND ALL THOSE IN *IMPORTANT INFORMATION* AT THE FRONT OF THIS MANUAL.

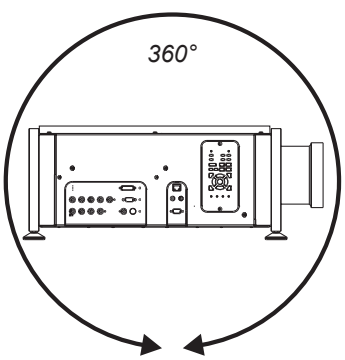
The projector weighs approximately 27 kg (50 lbs). Use safe handling techniques when lifting the projector.

Make sure that the surface, ceiling or rigging that is to support the projector is capable of supporting the combined weight of the projector and lens (see specification for weights)**.**

Backup safety chains or wires should always be used.

Do not tilt the projector more than ±12° from side to side when in use, as this may cause serious lamp failure, damage the lamp module and cause extra cost on replacement. The projector my be tilted forwards and backwards as necessary.

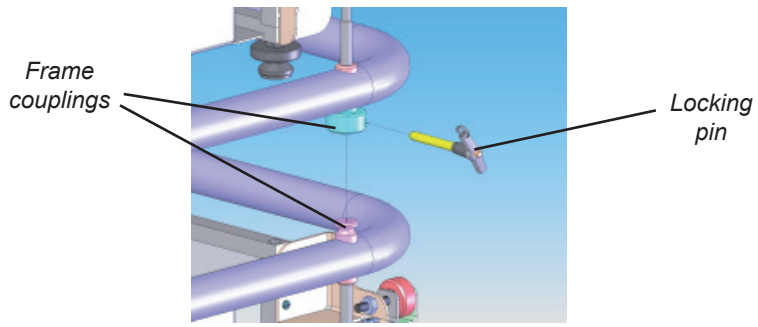


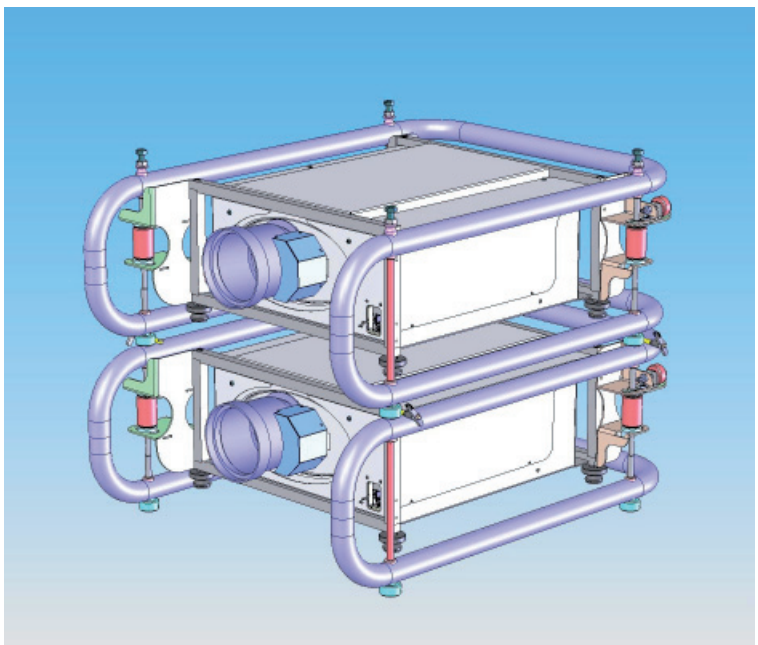


Stacking projectors

The rigging frame is capable of supporting the weight of up to two other projectors, using the built-in frame couplings. The projectors can be stacked on top of each other, or suspended below each other.

- Carefully lower each projector down onto the top of the others, making sure that all four frame couplings engage fully.
- Fit a locking pin into each coupling. A ball in the end of the pin prevents the pin from falling out – to insert or remove a locking pin, press the button on the t-bar to release the ball.





- Align the images from the projectors, following the instructions in **section 3. Getting started**, **Adjusting the lens** and **Adjusting the projected image**.

Notes

When stacking projectors, the stack MUST be vertical, to ensure that the stresses are distributed to all frame couplings.

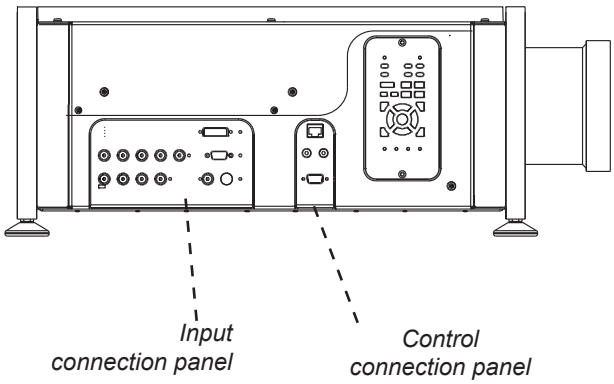
Make sure that the surface, ceiling or rigging that is to support the projector is capable of supporting the combined weight of all the projectors and lenses (see specification for weights)**.**

Do not place heavy objects on top of the projector chassis. Only the chassis corners and the rigging frame are capable of withstanding the weight of another projector.

Do not try to stack more than 3 projectors.

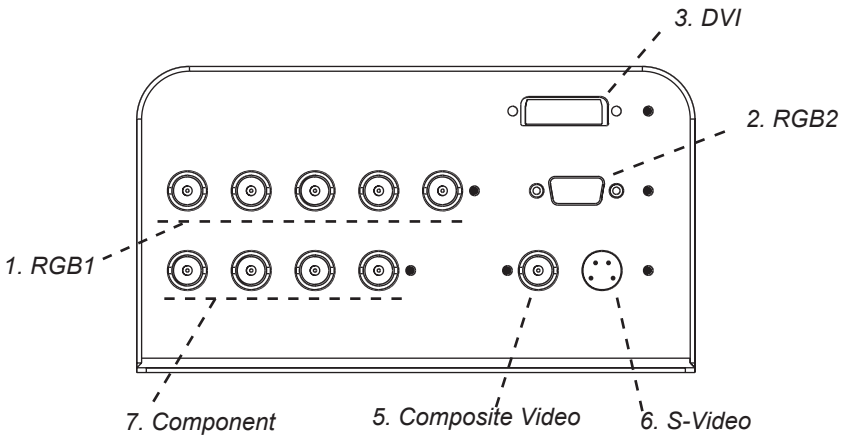
Separate backup safety chains or wires should always be used for each projector.

Connecting the projector



Signal Inputs

The following inputs are available:



EDID handshaking on the DVI and RGB2 inputs

If you are using a computer DVI card or other source that obeys the EDID handshaking protocol, then the card or source will automatically configure itself to suit the projector.

If not, then you should refer to the documentation supplied with the source to manually set the resolution to 1280 x 720 or the nearest suitable setting. Switch off the source, connect to the projector, then switch the source back on again.

Notes

For more information on selecting an input source, see **section 4. Overview, Using the control keys**, *and* **Using the menus**.

Input 4. is not used on this projector.

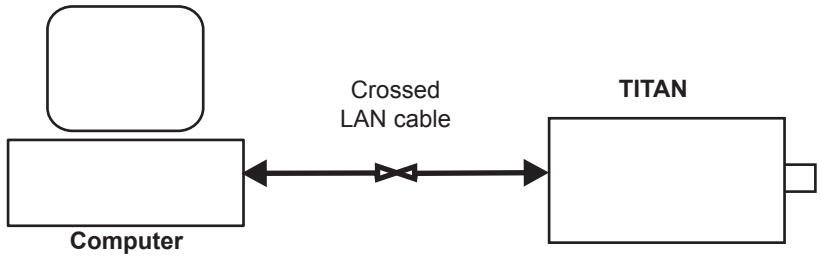
For more information about pin connections and control codes see **section 7. Appendix.**

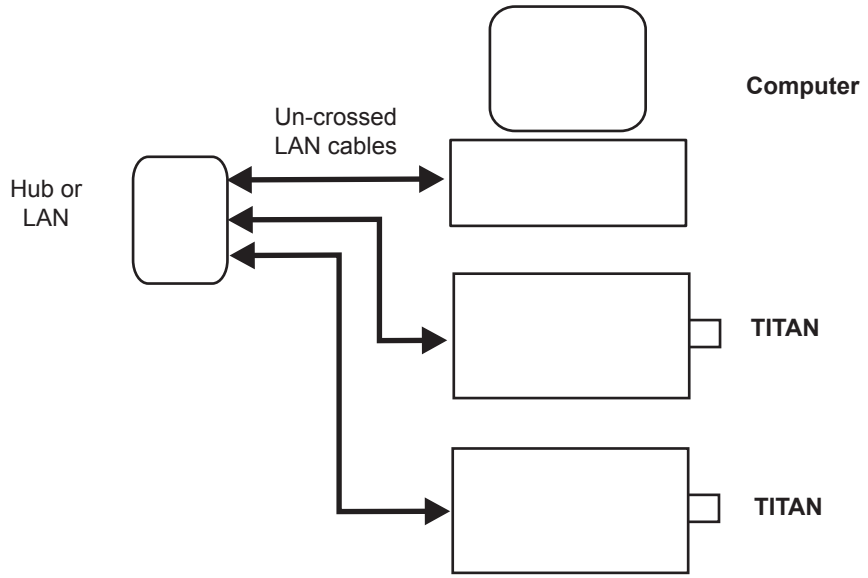
For more information on input modes see **section 4. Overview**.

Control connection examples

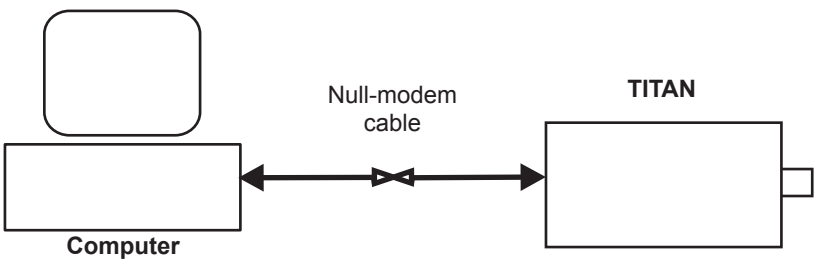
LAN connection

All of the projector's features can be controlled via a LAN connection, using a standard internet browser package such as Internet Explorer.





RS232 connection



Notes

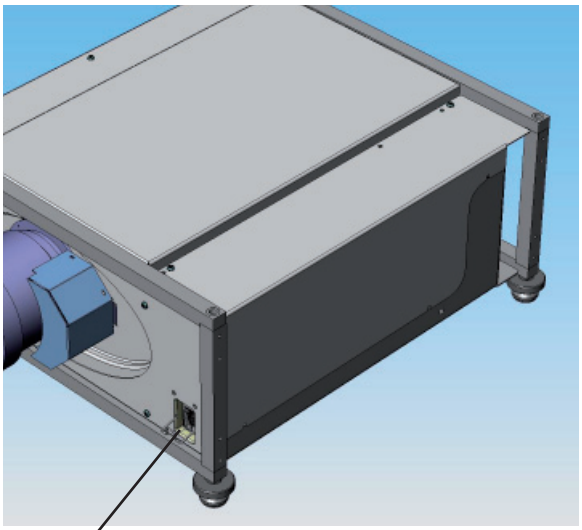
For more information about pin connections and control codes see **section 7. Appendix.**

For more information about using a browser to control the projector see **section 4. Using the menus**.

Power connection

When mains power is first applied, the projector will perform a self-test, then go into Standby mode.

The Power indicator on the control panel will show amber until the **POWER** (ON) on the remote control or the keypad, is pressed for 3 seconds.



Power connection

Notes

Use only the power cable provided.

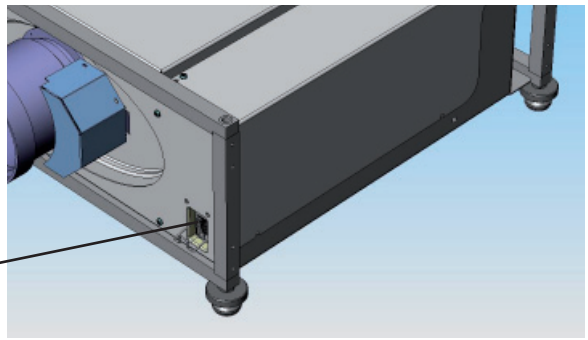
Ensure that the power outlet includes a Ground connection, as this equipment MUST be earthed.

Handle the power cable carefully and avoid sharp bends. Do not use a damaged power cable.

3. Getting Started
Contents

Switching the projector on

- Connect the power cable between the mains supply and the projector.



Wait until the self-test has completed and the power indicator on the control panel shows amber. The lamp will be off, the shutter closed, and the projector will be in STANDBY mode.

- Press POWER (ON) on the remote control or the keypad, and hold for about 3 seconds to switch the projector ON. The power indicator on the control panel will show green, the lamp will light and the shutter will open.

Selecting an input or test pattern

Input

- Press (INPUT +) or (– INPUT) to change to the next input up or down the following list:

  1. RGB1

  2. RGB2

  3. DVI

  4. (not used in this projector)

  5. Composite Video

  6. S-Video

  7. Component

- Or press the numbered keys **1–7** to change directly to the input:

(1 RGB1) (2 RGB2) (3 DVI)

(4 SDI) (5 VID) (6 SVID)

(7 COM)

Test pattern

If you have no video source connected to the projector, then you can display a test pattern as follows:

- Press (TEST) on the remote control, to select a test pattern.

Notes

For more information about connecting the power cable, see **Power Connections**, *in* **section 2. Installation**.

For more detailed information about:

- using the control keys on the remote control or keypad,

- using the menus,

see the next section: ***Controlling the projector***.

Input 4. is not used on this projector.

Adjusting the lens

Focus

- Press FOCUS followed by ▲ and ▼ to adjust the focus.

  When adjustment is finished, press EXIT.

Zoom

- Press ZOOM followed by ▲ and ▼ to adjust the zoom.

  When adjustment is finished, press EXIT.

Shift

- Press SHIFT followed by ▲, ▼, ◀ or ▶ to shift the lens up, down, left or right.

  When adjustment is finished, press EXIT.

Notes

For more detailed information about:

- using the control keys on the remote control or keypad,

- using the menus,

see the next section: ***Controlling the projector****.*

When any of the three Lens adjustment keys is pressed, the blue Transmit indicator on the remote control will light for 10 seconds:

- after 10 seconds, if no adjustment has been made, the indicator will go out and the Lens adjustment key must be pressed again to resume adjustment.

- to end the adjustment before 10 seconds has elapsed, press the EXIT key.

- all other adjustments will be locked out until the Lens adjustment is ended.

Adjusting the projected image

Picture settings

- Press a ◯ key, followed by ◀ and ▶ to adjust these picture settings:

Brightness	◯ BRI
Contrast	◯ CON
Saturation	◯ SAT
Phase	◯ PHASE
Aspect ratio	◯ ASPECT

Geometry settings

- Press Keystone ◯ KEYST

  followed by ◀ and ▶ to adjust the keystone correction.

- Press Position ◯ POS *(for all inputs except DVI)*

  followed by ◀, ▶, ▲ and ▼ to adjust the picture position, for images smaller than the DMD.

Switching the projector off

- Press POWER (OFF) on the remote control or keypad, and hold for 3 seconds, to switch the projector OFF.

Notes

The **Saturation** *control is available for Composite, S-Video and Component inputs only.*

The **Phase** *control is available for RGB inputs only.*

For more detailed information about:

- using the control keys on the remote control or keypad,

- using the menus,

see the next section: ***Controlling the projector****.*

For all adjustments that require more than one key to be pressed:

- after 10 seconds, if no adjustment has been made, the indicator will go out and the adjustment key must be pressed again.

- to end the adjustment before 10 seconds has elapsed, press a different adjustment key, or press the Exit key.

Always allow the lamp to cool for 5 minutes before:

- disconnecting the power
- moving the projector
- changing the lamp

4. Controlling the projector
Contents

continued

continued

Overview

Controlling the projector

The projector can be controlled from:

- the remote control
- the keypad
- the RS232 input
- the Ethernet input

  For more information about controlling the projector using the RS232 and Ethernet inputs, see **Remote communications protocol** in **section 7. Appendix.**

  For information about how to connect the projector, see **Connecting the projector** in **section 2. Installation**, and **Connections in section 7. Appendix**.

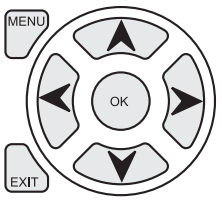
- Many features are controlled from the menus using the menu navigation keys on the remote control or keypad.

  For more information about using the menus, see later in this section, **Using the menus**.

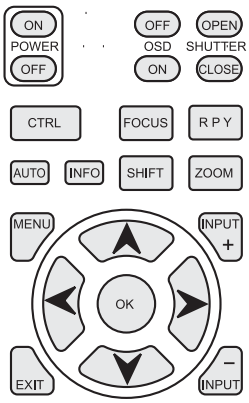
- Some of the menu features, for example brightness, contrast and input preset operations, can be accessed directly using the control keys at the bottom of the remote control.
- Other features, eg zoom and focus, are controlled using the control keys at the top of the remote control and keypad.

  For more information about using the control keys, see later in this section, **Using the control keys**.

Notes



Menu navigation keys



Control keys

Input modes and settings

Input mode detection

The projector can automatically detect the following parameters from the incoming video signal:

- line frequency
- frame rate
- interlace / progressive

From these parameters the projector can determine input mode, for example:

• input source	horizontal	vertical	mode
• composite	15.7KHz	50.0Hz	= NTSC
• RGB1	31.5KHz	60.0Hz	= SDTV 480p
• DVI	31.25KHz	50.0Hz	= SVGA

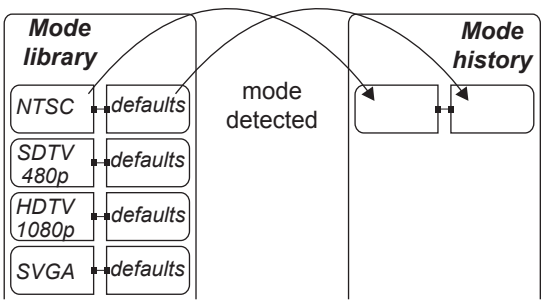
When you select a new input source, the green LED near the input connector will flash, and the searching message will be displayed.

When the input mode has been detected, the LED will show continuously and the auto detect message will be displayed, for example:

If the input mode cannot be detected, the LED will continue to flash, to show that the input is still selected. However, the following message will be displayed:

Mode library and mode history

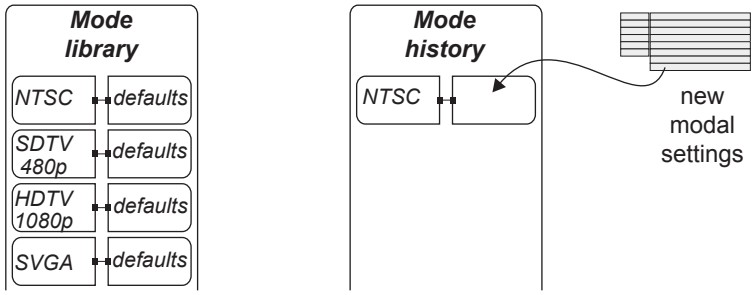
Once an input mode has been successfully determined for the first time, a set of default modal settings (picture, geometry and colour), will be copied from the **mode library** to the **mode history**.



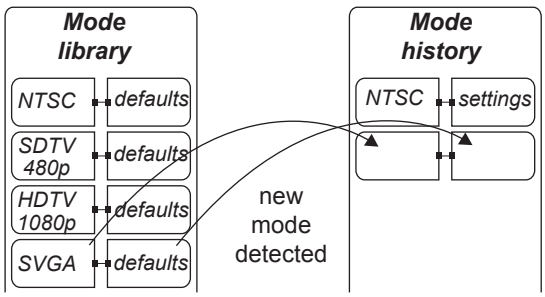
Notes

For a full list of supported input modes, see **Input modes supported***, in* **section 7. Appendix**.

Any subsequent changes that you make to the modal settings will be saved in the mode history, with the input mode.



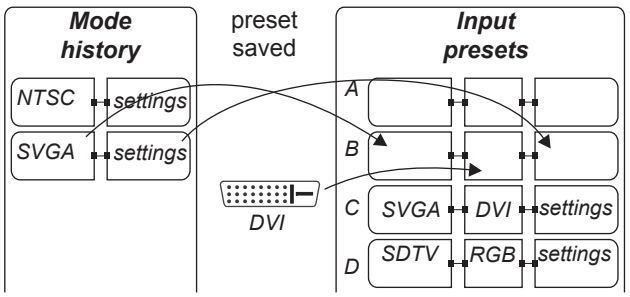
If a new signal is detected, the mode history for the previous signal will be saved in the mode history, and the new mode added, along with a new set of default settings. Thus the projector builds up a history of input modes, and the required settings for each mode, depending on actual useage.



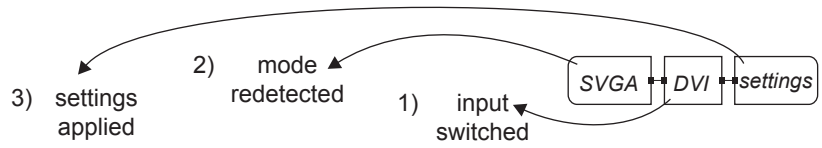
Input presets

It may be the case that you need to save more than one set of modal settings for the same input mode. For example you may have more than one video player or a selection of films with different characteristics.

In that case, the current input source and modal settings can be saved to any one of 16 **input presets**, for recall when the same input source is used again.



When you recell a preset, the projector switches to the saved input source, and redetects the input mode before applying the saved modal settings.



Notes

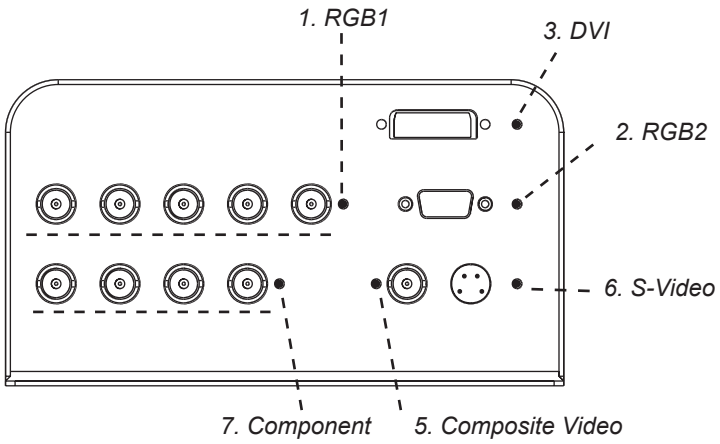
In normal use, there should be adequate memory to record all likely modal settings in the mode history.

However, in exceptional circumstances, the least used settings will be deleted, to allow a new mode to be added.

A preset can be applied only to the same mode for which it was created. If the detected input mode does not match, then settings from the mode history or mode library will be applied.

Indicators

Input status indicators



The indicator next to each input connector on the input panel will light as follows:

off = input not selected

green = input selected, signal detected and in range

flashing green = input selected, but signal **not** detected or out of range

Notes

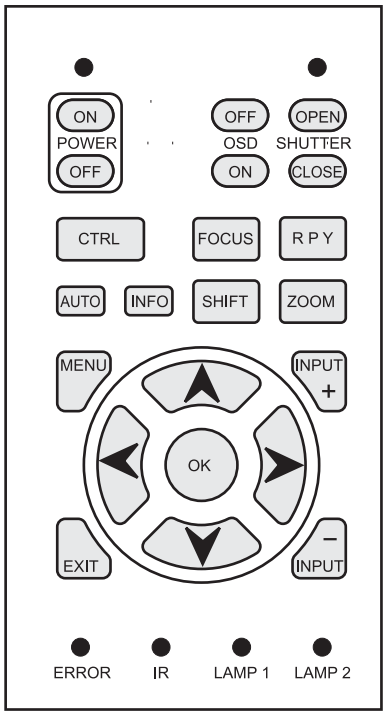
There are more indicators on the Control panel, and these are described on the next page.

Input 4. is not used on this projector.

The control panel

Keypad layout

The controls on the keypad are identical to those at the top of the remote control, and are described on the following pages.



Projector status indicators

The indicators on the control panel are as follows:

Power *off* = NO POWER

green = normal RUNNING mode *amber* = STANDBY mode

Shutter *yellow* = CLOSED *green* = OPEN

Error *off* = NO ERROR

flashing = ERROR (temperature) *steady* = ERROR (voltage)

IR *blue flash* = Remote control command received

Lamp 1 *off* = OFF

flashing red = LAMP ERROR *green* = ON (100%) *amber* = (80 - 99%)

flashing green/amber = LAMP COOL-DOWN or WARM-UP

Lamp 2 *off* = OFF

flashing red = LAMP ERROR *green* = ON (100%) *amber* = (80 - 99%)

flashing green/amber = LAMP COOL-DOWN or WARM-UP

Notes

Many features are controlled from the menus using the **menu navigation keys** *on the remote control or keypad.*

For more information about using the menus, see later in this section, **Using the menus**.

Some of the menu features, for example brightness, contrast and input preset operations, can be accessed directly using the ***control keys*** *at the bottom of the remote control.*

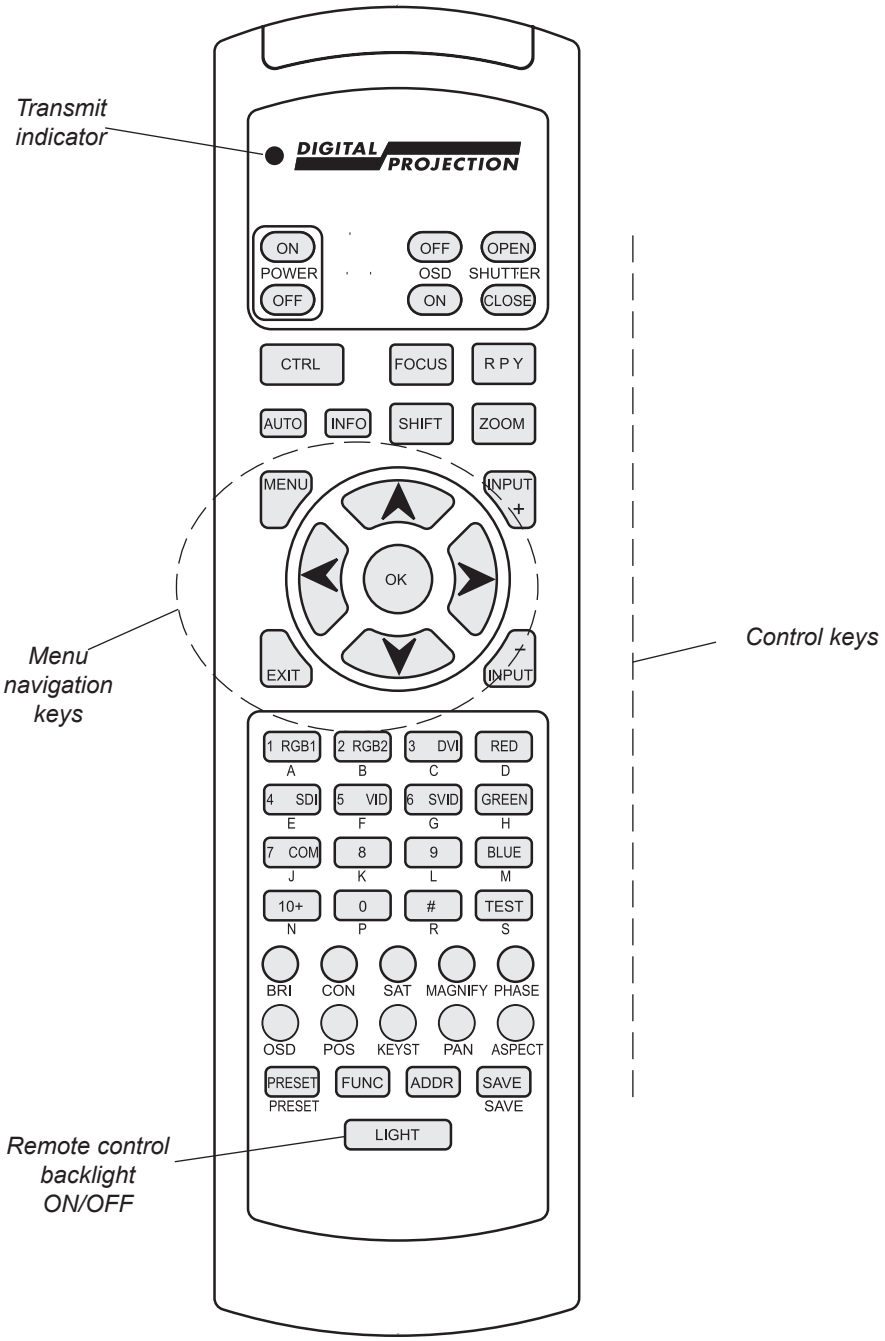
Other features, eg zoom and focus, are controlled using the **control keys** *at the top of the remote control and keypad.*

For more information about using the control keys, see later in this section, **Using the control keys**.

The **Lamp 2** *indicator applies only to the HD-500. The HD-250 has only one lamp.*

The remote control

Layout



Timeout

There is a 10 second timeout for the three Lens adjustment keys (see note on next page).

There is a separate, adjustable timeout for the On Screen Menus (see **On Screen Display**, in **Setup Menu**, later in this section).

Notes

Many features are controlled from the menus using the **menu navigation keys** *on the remote control or keypad.*

For more information about using the menus, see later in this section, **Using the menus**.

Some of the menu features, for example brightness, contrast and input preset operations, can be accessed directly using the ***control keys*** *at the bottom of the remote control.*

Other features, eg zoom and focus, are controlled using the **control keys** *at the top of the remote control and keypad.*

For more information about using the control keys, see later in this section, **Using the control keys**.

The following keys are **NOT** *used on this projector:*

CTRL
R P Y
FUNC
10+ *(but N is used)*
*(but R is used)*

Note that plugging in the remote control cable will disable the infra-red.

Using the control keys

Power

- Press POWER (ON) and hold for 3 seconds, to switch the projector ON.
- Press POWER (OFF) and hold for 3 seconds, to switch the projector OFF.

Shutter

- Press SHUTTER (OPEN) to OPEN the shutter.
- Press SHUTTER (CLOSE) to CLOSE the shutter.

On-Screen-Display

- Press OSD (OFF) to switch the On-Screen-Display OFF.

  This includes ALL menus, controls and on-screen messages.
- Press OSD (ON) to switch the On-Screen-Display ON.

Focus

- Press [FOCUS] followed by ▲ and ▼ to adjust the focus.

  When adjustment is finished, press [EXIT].

Zoom

- Press [ZOOM] followed by ▲ and ▼ to adjust the zoom.

  When adjustment is finished, press [EXIT].

Shift

- Press [SHIFT] followed by ▲, ▼, ◀ or ▶ to shift the lens up, down, left or right.

  When adjustment is finished, press [EXIT].

Notes

Closing the shutter produces a better black than simply removing the signal, as the light source will be completely blocked by the shutter blade.

When the OSD is OFF:

- all menu navigation keys are disabled.

*- keys such as ◯ **BRI** (brightness) will still function, but the slider bars will not be visible on screen.*

When any of the three Lens adjustment keys is pressed, the blue Transmit indicator on the remote control will light for 10 seconds:

- after 10 seconds, if no adjustment has been made, the indicator will go out and the Lens adjustment key must be pressed again to resume adjustment.

- to end the adjustment before 10 seconds has elapsed, press the [EXIT] key.

- all other adjustments will be locked out until the Lens adjustment is ended.

For more information about the amount of lens shift available, see **section 2. Installation**.

Auto-detect input mode

- Press AUTO to force the projector to re-detect the input mode (see **Input modes and settings**, earlier in this section).

Source information

- Press INFO to display the source information screen.

Input

- Press INPUT + or – INPUT to change to the next input up or down the following list:

  1. RGB1

  2. RGB2

  3. DVI

  4. (not used in this projector)

  5. Composite Video

  6. S-Video

  7. Component

- Or press the numbered keys 1–7 to change directly to the input:

  1 RGB1 2 RGB2 3 DVI

  4 SDI 5 VID 6 SVID

  7 COM

Notes

For more information about input mode detection, see earlier in this section, **Input modes and settings**.

Input 4. is not used on this projector.

Input Presets

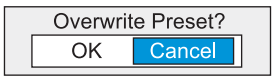
Recall

- To recall a set of modal settings that have been saved, press and hold PRESET, whilst pressing the lettered key A – S.
- The projector will switch to the saved input source, and redetect the input mode before applying the saved modal settings.

Save

- To save the current input source, mode and modal settings, press and hold SAVE, whilst pressing the lettered key A – S.

  If this Preset has been used before, and the Input source has been changed, then the following message will be displayed.



- Press ◀ and ▶ to select either OK or Cancel.
- Press OK to confirm your selection.
- The modal settings will be saved to the selected preset, and the following message will be displayed.

Notes

For more information about input modes and input presets, see earlier in this section, **Input modes and settings**.

A preset can be applied only to the same mode for which it was created. If the detected input mode does not match, then settings from the mode history or mode library will be applied.

For more information about input modes, see **Input modes and settings**. *earlier in this section.*

Red, Green and Blue

- Press RED, GREEN or BLUE to switch the red, green or blue components OFF or ON.

Test pattern

- Press TEST to select a test pattern.

Picture settings

- Press a ◯ key, followed by ◀ and ▶ to adjust these picture settings:

Brightness	◯ **BRI**
Contrast	◯ **CON**
Saturation	◯ **SAT**
Phase	◯ **PHASE**
Aspect ratio	◯ **ASPECT**

Geometry settings

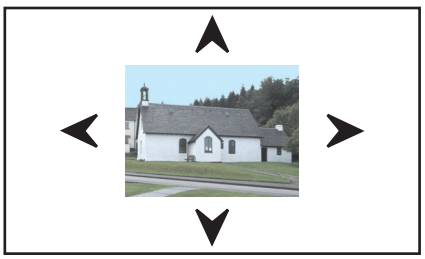
Keystone adjustment is used to correct for distortion caused by the projector being mounted higher or lower than the screen.

- Press Keystone ◯ KEYST,

  followed by ◀ and ▶ to adjust the keystone correction:

- Press Position ◯ POS,

  followed by ◀, ▶, ▲ and ▼ to adjust the picture position, for images smaller than the DMD:



Notes

The red, green and blue keys are disabled when the OSD is switched OFF.

The **Saturation** *control is available for Composite, S-Video and Component inputs only.*

The **Phase** *control is available for RGB inputs only.*

For all adjustments on this page that require more than one key to be pressed:

- after 10 seconds, if no adjustment has been made, the ◯ key must be pressed again to resume adjustment.

- to end the adjustment before 10 seconds has elapsed, press a different adjustment key, or press the EXIT key.

When the OSD is OFF:

- the ◯ keys will still function, but the controls will not be visible on screen.

Magnify and pan

- Press Magnify ◯ MAGNIFY

  followed by ▲ and ▼ to adjust the size of the picture.

- Press Pan ◯ PAN

  followed by ◀, ▶, ▲ and ▼ to adjust the position of the magnified image.

On-screen-display size

- Press Size ◯ SIZE

  to switch the size of the OSD between large and small.

Remote control address

The projector and the remote control need to be set to matching addresses. Read the note to the right on this page, and follow the instructions in the order shown below:

1 Set the projector address as shown in **Setup menu**, later in this section.

2 Set the remote control address:

- Press and hold [ADDR]

  whilst pressing two numbered keys [ ] 0 – 9

  to set the remote control address to any number between 00 and 99.
  (leading zeros must be used for numbers less than 10)

Remote control backlight

- Press [LIGHT] to switch the backlight on and off.

Notes

The magnify feature utilises a digital zoom. Used with the pan control, this can be used to:

- enlarge a section of the image

- enable the use of multiple projectors to construct a large image from tiles.

The pan control is available only when the image has been magnified.

If the OSD moves off screen due to a change in image size, then pressing the size key will restore its readability.

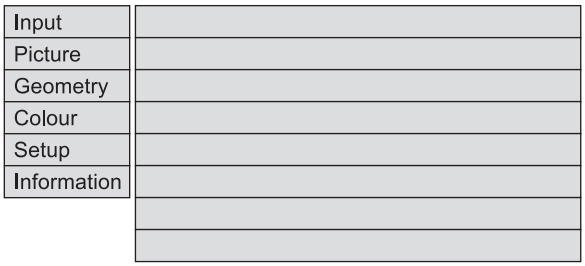
When fresh batteries are inserted in the remote control it will default to address **00**. *Remote control* **00** *is a* **master** *control, able to control all projectors.*

If two or more projectors are set to the same address, they can be controlled from one remote control, provided they are connected by cable or in range of the infra red.

Using the menus

Navigating menus and submenus

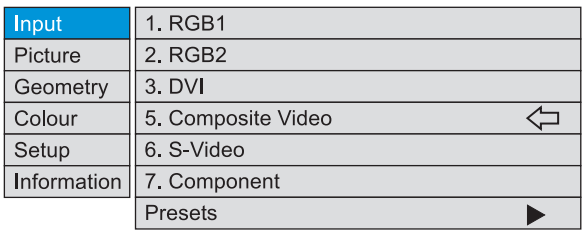
When the menus are in use and the OSD is ON, the **top level menu headings** are always visible to the left of the screen.



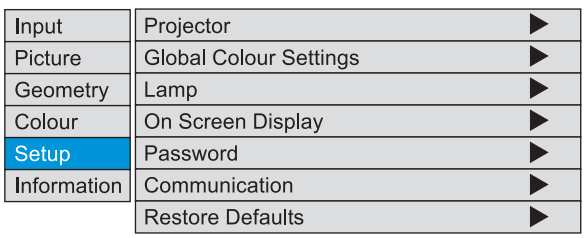
Each **menu** item can lead to a number of **submenus**, which are displayed in the column to the right . The ▶ symbol indicates that a submenu is available.

Each **submenu** can lead to further submenus, up to a maximum of three levels.

- To display the menus, press MENU on the remote control or the keypad.
- The menus will always open at the same point they were last viewed. The example below shows the first menu display following power on – the item that is currently selected (the Input menu) is highlighted in blue.



- To select a menu, press ▲ and ▼, for example the Setup menu:



Notes

Some menu controls can be accessed directly using the **control keys** *(see earlier in this section).*

When the OSD is OFF, all menu navigation keys will be disabled.

When the OSD is switched back ON, the menus will remain OFF until the MENU *key is pressed again. The menus will then reopen at the same point they were last viewed.*

If a menu is opened, and no other key is pressed within the period set in the **OSD Timeout** *menu, then the menus will disappear. When the* MENU *key is pressed again, the menus will reopen at the same point they were last viewed.*

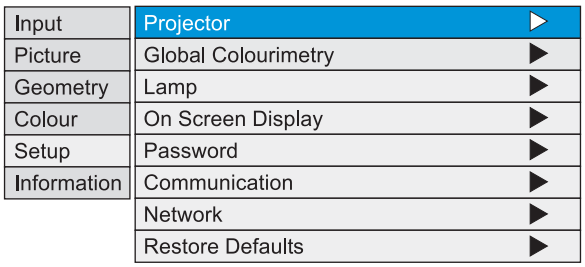
(see **On Screen Display**, *in* **Setup Menu**, *later in this section).)*

Main menu: Input

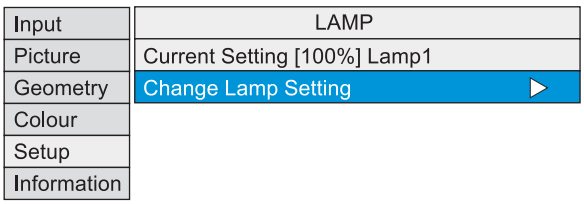
Input 4. is not used on this projector.

Main menu: Setup

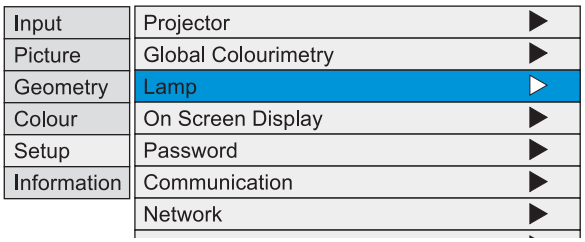
Press ➤ to open the menu. The blue highlight moves to the first item in the menu, which may be submenu, for example the Projector Setup submenu.



- To select a submenu, press ▲ and ▼, for example the Lamp submenu. Press ➤ to open the submenu. The submenu opens, with the title at the top.



- To close the submenu and return to the previous level, press EXIT.



- There may be up to three levels of submenu, so to return to the top level, you may have to press EXIT up to three times.
- To close the menu display completely, press MENU.

Notes

Setup menu

Setup menu
Lamp

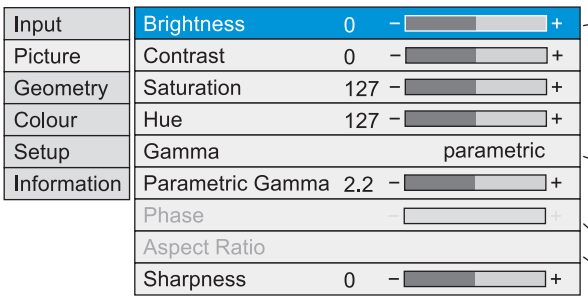
Setup menu

Menu controls

Some menus have controls, as shown in the examples below.

Notes

Some menus items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.



Slider bar

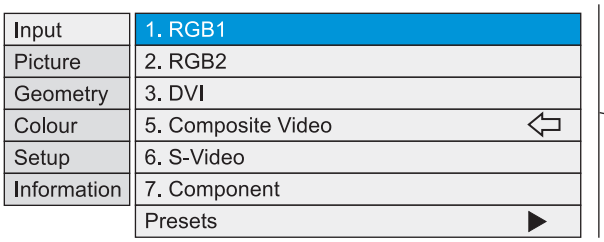
The highlighted slider bar shows which control is active currently.

To adjust the slider press ◀ and ▶.

Parameter selection

To select from a number of parameters, (shown one at a time to the right), press ◀ and ▶.

These two items are greyed out and the values are blank, showing that they are not available, due to the effect of settings made in other menus, or due to the type of input signal.



Parameter list

To select from a list of parameters, press ▲ and ▼.

Input menu

*To return to the **main menu**, press* EXIT *up to three times.*

From the main menu:

- Press ▲ and ▼ until Input is highlighted.

  Press ➤ to open the Input menu. The blue highlight moves to the first item in the menu. The ⇦ symbol shows which input is currently selected.

Input	1. RGB1
Picture	2. RGB2
Geometry	3. DVI
Colour	5. Composite Video ⇦

Information	7. Component
	Presets ▶

Input Source

- Press ▲ and ▼ to select from:

  1. RGB1

  2. RGB2

  3. DVI

  4. (not used in this projector)

  5. Composite Video

  6. S-Video

  7. Component

- Press OK to confirm your selection.

Notes

Some menu controls can be accessed directly using the **control keys** *(see earlier in this section).*

When using the menus, press **OSD** OFF *or* ON *to hide or reveal the On-Screen-Display.*

Input Menu

Input 4. is not used on this projector.

For more information about the input connections, see **section 2. Installation**, *and* **section 7. Appendix**.

When an input has been selected, the projector will automatically detect input mode settings such as line rate and resolution etc.

To force the projector to re-detect the input mode settings, press AUTO.

Input menu continued

Presets

Sixteen sets of parameters can be saved and recalled *(A – S)*. The parameters saved for each **Preset** are:

all settings from the Picture menu,

all settings from the Input menu (**1 – 7**)

all settings from the Geometry menu, except Keystone

all settings from the Colour menu, except Global

- Press ▲ and ▼ to select Presets.

  Press ➤ to open the Presets submenu.

	Sharpness	0	− +

Brightness

- Press ▲ and ▼ to select Brightness.

  Press ◄ and ➤ to adjust the slider (-128 to +127).

Contrast

- Press ▲ and ▼ to select Contrast.

  Press ◄ and ➤ to adjust the slider (-128 to +127).

Saturation

Adjusts the saturation at white peak levels.

- Press ▲ and ▼ to select Saturation.

  Press ◄ and ➤ to adjust the slider (0 to 255).

Hue

Adjusts the color balance from green to blue, using the red level as a reference.

- Press ▲ and ▼ to select Hue.

  Press ◄ and ➤ to adjust the slider (0 to 255).

Notes

Some menu controls can be accessed directly using the **control keys** *(see earlier in this section).*

When using the menus, press **OSD** OFF *or* ON *to hide or reveal the On-Screen-Display.*

Picture Menu

Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.

The **Saturation** *slider is available for Composite, S-Video and Component inputs only.*

The **Hue** *slider is available for NTSC inputs only.*

Picture menu continued

Gamma Correction

Video recordings are often supplied with a gamma adjustment applied. The projector's gamma adjustment can be used to correct for this.

- Press ▲ and ▼ to select Gamma.

  Press ◀ and ▶ to select from:

Parametric	Enables the gamma slider
User download	Applies the gamma settings made externally using the DP Userware on a personal computer
Graphics	To be defined.
NTSC	NTSC colour space, with a gamma of 2.2
PAL	PAL colour space, with a gamma of 2.2
Punch	Enhanced brightness and increased colour saturation for high ambient environments.

Parametric Gamma

- Press ▲ and ▼ to select Parametric Gamma.

  Press ◀ and ▶ to adjust the slider (1.0 to 3.0 in 0.1 steps).

Phase

Phase should be set automatically by the projector, but can be adjusted manually to correct for shimmering or poor quality definition on, for example, fine text.

- Press ▲ and ▼ to select Phase.

  Press ◀ and ▶ to adjust the slider (0 to 31).

Notes

☞ *For more information about User gamma settings, see* **section 5. DP Userware**.

Aspect Ratio

- Press ▲ and ▼ to select Aspect Ratio.

  Press ◄ and ► to select from:

Fill	*This will best fit the incoming source to fill either the height or width without changing the aspect ratio of the source.*
User Aspect	
1.33:1 (4:3)	
1.25:1 (5:4)	
1.78:1 (16:9)	
2.35:1 (Scope)	
1.66:1 (Vista)	
1.85 (Flat)	
Theaterscope	*Use with the TheaterScope Anamorphic System only. The 2.35:1 source image is displayed using the full area of the 16:9 DMD. This is then stretched to 2.35:1 by the lens.*
Native	*The image will be displayed pixel for pixel. The image will be centred, with a black border if smaller than 1280 x 720 or cropped if larger.*

Sharpness

- Press ▲ and ▼ to select Sharpness.

  Press ◄ and ► to adjust the slider.

Notes

☞ **Aspect Ratio** *selection can be found in both the Picture and Geometry menus.*

☞ *When* **User Aspect** *is selected, the Aspect Ratio settings are taken from the* **User H Aspect** *and* **V Aspect** *settings made in the* **Geometry** *menu.*

☞ *The* **Sharpness** *slider is available for Composite, S-Video and Component SD inputs only.*

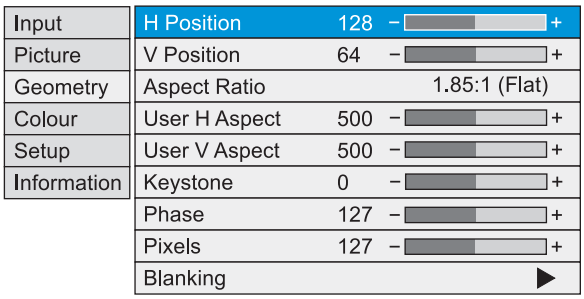
Geometry menu

*To return to the **main menu**, press* EXIT *up to three times.*

From the main menu:

- Press ▲ and ▼ until Geometry is highlighted.

  Press ➤ to open the Geometry menu. The blue highlight moves to the first item in the menu.



Horizontal Position

- Press ▲ and ▼ to select H Position.

  Press ◀ and ➤ to adjust the slider.

Vertical Position

- Press ▲ and ▼ to select V Position.

  Press ◀ and ➤ to adjust the slider.

Aspect Ratio

- Press ◀ and ➤ to select from:

Fill *This will best fit the incoming source to fill either the height or width without changing the aspect ratio of the source.*

User Aspect

1.33:1 (4:3)

1.25:1 (5:4)

1.78:1 (16:9)

2.35:1 (Scope)

1.66:1 (Vista)

1.85 (Flat)

Theaterscope *Use with the TheaterScope Anamorphic System only. The 2.35:1 source image is displayed using the full area of the 16:9 DMD. This is then stretched to 2.35:1 by the lens.*

Native *The image will be displayed pixel for pixel. The image will be centred, with a black border if smaller than 1280 x 720 or cropped if larger.*

Notes

*Some menu controls can be accessed directly using the **control keys** (see earlier in this section).*

*When using the menus, press **OSD** OFF or ON to hide or reveal the On-Screen-Display.*

Geometry Menu

Some menu items may be greyed out - unavailable due to the effect of settings made in other menus, or due to the type of input signal.

Aspect Ratio *selection can be found in both the Picture and Geometry menus.*

*When **User Aspect** is selected, the Aspect Ratio settings are taken from the **User H Aspect** and **V Aspect** settings (see next page).*

Geometry menu continued

User Horizontal Aspect Ratio

- Press ▲ and ▼ to select User H Aspect.

  Press ◀ and ▶ to adjust the slider (internal number – adjust to fit).

User Vertical Aspect Ratio

- Press ▲ and ▼ to select User V Aspect.

  Press ◀ and ▶ to adjust the slider (internal number – adjust to fit).

Keystone

Used to correct for distortion caused by the projector being mounted higher or lower than the screen.

- Press ▲ and ▼ to select Keystone.

  Press ◀ and ▶ to adjust the slider (-128 to +127).

Phase

Phase should be set automatically by the projector, but can be adjusted manually to correct for shimmering or poor quality definition on, for example, fine text.

- Press ▲ and ▼ to select Phase.

  Press ◀ and ▶ to adjust the slider (0 to 32).

Pixels per line

Pixels per line should be set automatically by the projector, but can be adjusted manually to correct for non-standard sources.

- Press ▲ and ▼ to select Pixels.

  Press ◀ and ▶ to adjust the slider.

Notes

Horizontal and Vertical Aspect Ratio *adjustments are available only when* **User** *is selected in* **Aspect Ratio**, *(see previous page).*

Keystone *adjustment can be found in both the Geometry and Projector Setup menus.*

Phase *adjustment can be found in both the Picture and Geometry menus, and is available for graphics based RGB sources only.*

Pixels *adjustment is available for graphics based RGB inputs only.*

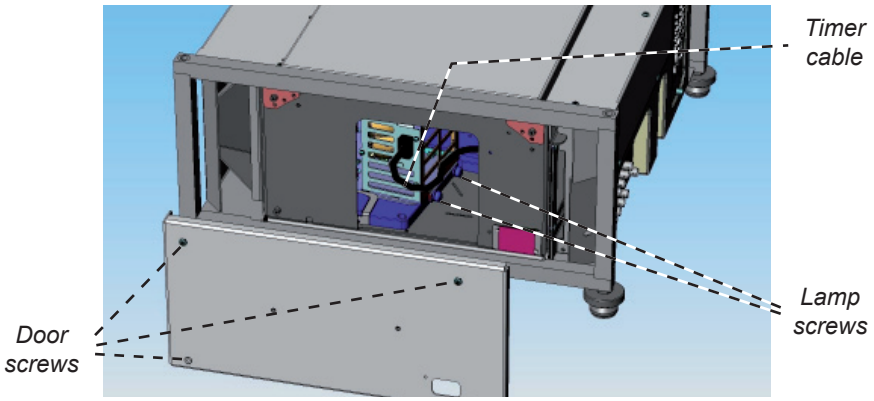
5. Userware
Contents

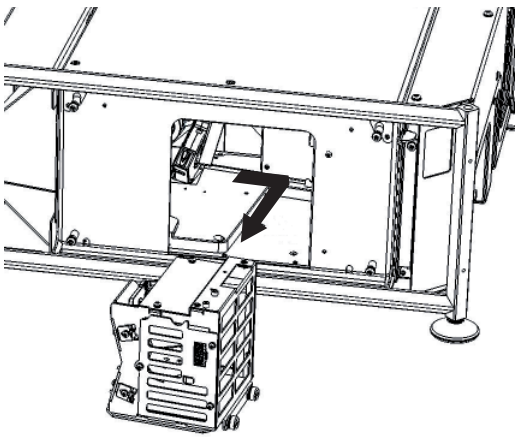
6. Maintenance
Contents

Changing the lamp module

- Turn the power OFF and allow the lamp to cool for 5 minutes.
- Unscrew the three door screws, and detach the rear door - the door is tethered, so cannot be removed completely.



- Disconnect the timer cable from the lamp module.
- Loosen the two captive finger screws securing the lamp module.
- Pull the lamp module to the right, then to the rear to remove it from the projector.



- Insert a new lamp module, manoeuvreing it carefully so that the plug on the top of the module mates properly with the socket in the roof of the cabinet.
- Tighten the two lamp fixing screws.
- Reconnect the timer cable.
- Re-fit the rear door, making sure that the door tether is not trapped, and tighten the four screws.

Notes

Always allow the lamp to cool for 5 minutes before:

- disconnecting the power
- moving the projector
- changing the lamp

There are no user-serviceable parts inside the lamp module. The whole module should be replaced.

At the end of life, the lamp will not strike, and the Lamp Indicator on the control panel will show red. (Typical lamp life is 1500 hours)

Do not use the lamp for more than 1500 hours, as this may cause serious lamp failure, damage the lamp module and cause extra cost on replacement.

Take care not to touch the glass surface of the lamp module. If you do accidentally touch the glass, it should be cleaned before use.

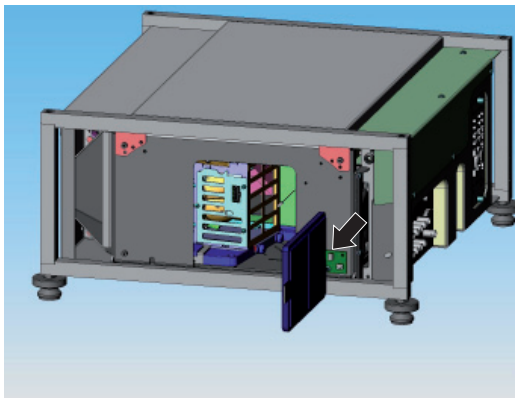
HID lamps produce high intensity light. Do not look directly at the light coming from the lamp housing or the lens.

The filter should be changed at the same time as the lamp is changed - see next page.

The projector cannot be operated until the door is fully closed.

Changing the air filter

- Turn the power OFF and allow the lamp to cool for 5 minutes.
- Unscrew the three door screws, and remove the rear door.
- Pull out the air filter.
- Fit a new air filter.
- Re-fit the rear door, making sure that the door tether is not trapped, and tighten the three screws.



Notes

Always allow the lamp to cool for 5 minutes before:

- disconnecting the power
- moving the projector
- changing the lamp

The air filter should be changed regularly:

- In a clean environment such as an office, change after 1500 hours, at the same time as the lamp is changed.

- In a dusty or smoky environment such as a theatre or public area, more frequent changes may be necessary.

Opening the rear door will switch the projector OFF.

The projector cannot be operated until the door is fully closed.

Cleaning

Turn the projector off before cleaning.

Projector

Clean the cabinet periodically with a damp cloth. If heavily soiled, use a mild detergent.

Lens

Use a blower or lens paper to clean the lens, taking care not to scratch the glass.

Lamp module

Use a blower or lens paper to clean ONLY the glass window, taking care not to scratch the glass.

Notes

Never use strong detergents or solvents such as alcohol or thinners to clean the projector and lens.

NEVER touch the lamp or reflector.

7. Appendix
Contents

Troubleshooting

Problem	*Possible solutions*
The projector will not power up.	Check that the mains plug is plugged in and that the mains supply is switched on. Check any external fuses or breakers.
The projector shuts down after it has been in use for some time.	The projector may be overheating. Check that the air inlets and outlets are clear of any obstruction. Check that the air filter is clean, and if it is dirty, fit a new one. See **section 1. Introduction, Getting to know the projector**
No image is displayed.	Check the lamp indicators on the control panel. If both indicators on the HD-500 are red, then both lamps are faulty. (The HD-250 has only one lamp.) See **section 5. Maintenance, Changing the lamp** Check that the input source is switched on and connected to the projector correctly. Check that the correct image source is selected. See **section 4. Controlling the projector, Using the control keys and Input menu** Check that the brightness and contrast settings are set correctly. See **section 4. Controlling the projector, Picture menu** The projector may be overheating. Check that the air inlets and outlets are clear of any obstruction. Check that the air filter is clean, and if it is dirty, fit a new one.
The image does not fit the screen correctly.	Check that the correct lens is being used for the combination of screen size and projection distance, and that the zoom is adjusted correctly. See **section 2. Installation, Choosing a lens** Check the image size settings. See **section 4. Controlling the projector, Picture or Geometry menus**
Uneven image quality.	Check that the projector is parallel to the screen. Check that the screen is flat, and securely mounted.

Problem	*Possible solutions*
Projector does not respond to control commands from a computer.	Check that the LAN or serial cable is connected correctly. See **this section 7. Appendix, Connections** If using a LAN, check that the address setting is made correctly. See **section 4. Controlling the projector, Network menu** If using a serial cable, check that the baud rate is set correctly. See **this section 7. Appendix, Connections** Check that the correct control codes are being used. See **Serial communications protocol** (available from Digital Projection)
Projector does not respond to control commands from the remote control.	If you **are** using a cable, check that the cable is connected properly at both ends, that the cable is not damaged and that the cable is no longer than 50m (150ft). If you are **not** using a cable, check that the infra red windows at the front and rear of the projector are not obstructed. Check that the cable is disconnected from the projector, as this disables the infra red. Check that the batteries are in good condition. Check that the address setting on the remote control is set either to zero, or to the same as the projector. See **section 4. Controlling the projector, Communication menu**
	In the event that this troubleshooting guide has not solved the problem, then contact your Digital Projection dealer or service centre.

Specifications

Part numbers

Projector, HD-500	105-948
Projector, HD-250	106-240
Rigging frame	104-923
Power cable 10A, Europe	102-163
Power cable 13A, North America	102-165
Power cable 10A, United Kingdom	102-180
Remote control	105-023
4x AAA batteries	105-922
Remote cable 5m	102-162
User manual on CD	105-923C
Important Information	105-924B

Replacement parts

Lamp module, HD-500	001-742
Lamp module, HD-250	102-246
Air filter	102-064

Lenses	**High Brightness**	**High Contrast**
0.63 : 1 fixed lens	001-734	102-373
0.96 : 1 fixed lens	001-735	102-835
1.2 - 1.44 : 1 zoom lens	001-736	102-374
1.44 - 1.8 : 1 zoom lens	001-737	102-375
1.8 - 2.4 : 1 zoom lens	001-738	102-376

3.6 - 5.6 : 1 zoom lens	001-740	102-378

Optical

Digital Light Processor	3 x 0.8” Texas Instruments DMD™, resolution 1280 x 720 pixels
Contrast Ratio	
HD-500	>1200:1 full field (±10%) (High Brightness lens)
HD-250	>4000:1 full field (±10%) (High Contrast lens)
Pixel fill factor	87%
Lamp power	
HD-500	2 x 250W
HD-250	1 x 250W
Lamp life (typical)	1500 hours in dual lamp mode (HD-500 only), 3000 in single lamp mode
Brightness	
HD-500	4500 ANSI lumens (±20%) in dual lamp mode (High Brightness lens)
HD-250	1600 ANSI lumens (±10%) (High Contrast lens)
Colour temperature	Native: 7500°K (±1000°K), White balance adjustment: 3000°K - 10000°K

Electrical

Inputs	RGB1, RGB2, DVI, Composite Video, S-Video, Component
Pixel clock	up to 165MHz
Control inputs	1 x LAN 1 x wifi LAN 1 x RS232 serial: 19200 baud, 8 bits, 1 stop bit, no parity 1 x remote control
Mains voltage	100-240 VAC ±10%, 48-62Hz (single phase)
Power consumption	
HD-500	750 W
HD-250	500W
International Regulations	Meets FCC Class B requirements Meets EMC Directives (EN 50081-1, EN 50082-1, EN 55022) MeetsLow Voltage Directive (EN60950)
Indicators	Power, Shutter, Error, IR, Lamp 1, Lamp 2 (HD-500 only)

Physical

Operating Temperature	0 to 40°C
Storage Temperature	-10 to 50°C
Thermal Dissipation	
HD-500	2600 BTU/hr
HD-250	1733 BTU/hr
Operating Humidity	20% to 80% non-condensing
Weight	approximately 27 kg (50 lbs)

FCC WIFI ID
R68WIPORT

* Hot plug detect (HPD) is fully DVI compliant. DVI sources detect the presence of a display device by providing +5V on pin 14 and looking for +5V on pin 16. Whenever the projector is operational, and 5V is present on pin 14, pin 16 will be held at +5V.

EDID is available even when the projector is switched off.

Operational means that the projector is powered up. Non operational states are powered down and some self test and reprogramming modes.

Notes

Null-modem cable

(used to connect the projector to a computer)

RX	2	---	3	TX
TX	3	---	2	RX
GND	5	---	5	GND

Serial port settings

- Baud rate 19,200 bps
- Data length 8 bits
- Stop bits one
- Parity none
- Flow control none

Notes

The projector is a DTE, so use:

- *a straight cable to connect to a modem, or*
- *• a null-modem cable as shown here to connect to another DTE such as a computer.*

Remote communications protocol

Version: Revision C 02/01/07

Introduction

This protocol document covers all projectors in the Titan series and also the Lightning 30/40isx+.

Only one remote connection (RS232, LAN or Wireless LAN) should be used at any one time.

Following the transmission of a command, the control system must wait to receive the complete reply before sending a new command.

It should be noted that this protocol is a point to point protocol, and any addressing commands relate to the projector's hand held remote control only.

Message Structure

The data type for all data is raw hexadecimal, and all data larger than 1 byte is formatted little endian i.e. LSB first. There are currently two supported message types:

Operation Messages (message type **03**h)
normal projector operations, fixed length message

Enhanced Messages (message type **10**h)
projector special functions, variable length message

Responses to all commands start with **1E**h

Notes

Details of how to connect to the projector, using the serial control input or via a LAN, can be found earlier in this section.

The following pages contain an overview of the message structure and examples of some basic Operation commands.

For full details of all the Operation commands and Enhanced commands, contact Digital Projection at one of the addresses printed near the front of this manual, and ask for a copy of the **Titan Projector Series External Control Protocol**.

Operation Messages

Operation messages are constructed using the following format:

	Header		**Type**	**Size**		**CRC**		**Oper'n type**	**Operation**		**Reserved**	
	2 bytes		*1 byte*	*2 bytes*		*2 bytes*		*1 byte*	*2 bytes*		*2 bytes*	
Data	BE	EF	03	19	00	58	58	00	00	00	00	00
Byte #	1	2	3	4	5	6	7	8	9	10	11	12

	Operation Target				**Operation Value**				**Reserved**			
	4 bytes				*4 bytes*				*4 bytes*			
Data	00	00	00	00	00	00	00	00	00	00	00	00
Byte #	13	14	15	16	17	18	19	20	21	22	23	24

	Reserved				**Reserved**			
	4 bytes				*4 bytes*			
Data	00	00	00	00	00	00	00	00
Byte #	25	26	27	28	29	30	31	32

Header is always **EFBE**h (byte 1 = **BE**h and byte 2 = **EF**h)

Type is always **03**h for Operation Messages

Size is always **0019**h (byte 4 = **19**h and byte 5 = **00**h) i.e. 25 bytes after CRC

CRC can be set to **5858**h if you want the CRC to be ignored. However, the CRC should ideally be calculated, as described in the **Titan Projector Series External Control Protocol**.

Operation type is one of the following:

Set **01**h

Get **02**h

Increment **03**h

Decrement **04**h

Execute **05**h

Set writes a value to the projector.

Get reads a value from the projector.

Increment and **decrement** increase or decrease a value by one unit.

Execute executes the current operation (specific commands only).

Spaces in the example messages are for visual clarity and should not be sent as part of the message.

Notes

The following pages contain examples of some basic Operation commands.

For full details of all the For full details of all the Operation commands and Enhanced commands, contact Digital Projection and ask for a copy of the **Titan Projector Series External Control Protocol.**

Enhanced Messages

Enhanced messages are constructed using the following format:

	Header *2 bytes*		**Type** *1 byte*	**Size** *2 bytes*		**CRC** *2 bytes*		**Data type** *2 bytes*		**Data length** *(n)* *2 bytes*	
Data	BE	EF	10	XX	XX	58	58	00	00	00	00
Byte #	1	2	3	4	5	6	7	8	9	10	11

	Data *n bytes*			
Data	Data bytes ...	...	...	
Byte #	12	...	...	11 + n

Header is always **EFBE**h (byte 0 = **BE**h and byte 1 = **EF**h)

Type is always **10**h for Enhanced Messages

CRC can be set to **5858**h if you want the CRC to be ignored. However, the CRC should ideally be calculated, as described in the **Titan Projector Series External Control Protocol**.

Size is always Data Length + 4 (4 bytes after CRC and before data)

Notes

The following pages contain examples of some basic Operation commands.

For full details of all the For full details of all the Operation commands and Enhanced commands, contact Digital Projection and ask for a copy of the **Titan Projector Series External Control Protocol.**

Operation Command examples

All operation commands are located at bytes 9 &10.

All values are located at bytes 17 & 18 unless otherwise indicated

*Power (***0102***)*

Projector On or Standby

	Value
On	**00**h
Standby	**04**h

Examples
