RUNCO

THE WORLD'S FINEST HOME THEATER PRODUCTS™

RuncoCare™ Standard Two Year Limited Warranty

Congratulations on your purchase of a Runco® product! With proper installation, setup and care, you should enjoy many years of unparalleled video performance.

This Limited Warranty is provided free of charge by Runco International, LLC ("Runco") with the purchase of a covered Runco product. This Limited Warranty is applicable to all Runco projectors, processors, LCD display and plasma display products, with the exception of the following models: XP-103DHD, SC-1 and SC-1a[1]. This Limited Warranty applies to purchases of covered Runco products occurring on or after **June 1, 2011**.

RuncoCare™ Limited Warranty Coverage

Runco warrants its products to be free from defects in material and workmanship during the warranty period provided below. If a product proves to be defective in material or workmanship during the warranty period, Runco will repair the product, replace the product with a substantially similar new or like-new product, or refund a prorated share of the purchase price (calculated based on the remainder of the warranty period and the then-current, most-recent MSRP[2] of a similar product), if repair or replacement of the product is determined by Runco to not be feasible.

Length of RuncoCare™ Warranty Period

Runco products are warranted for two (2) years from the date of shipment from Runco. Lamps are warranted six (6) months from the date of shipment or 1000 hours of use, whichever comes first. A replacement lamp is warranted for the remaining portion (if any) of the original warranty period or ninety (90) days from the date it was shipped to you, whichever is longer. All other accessories, which include but are not limited to cables, remotes, carrying cases, lens cap and other peripherals sold with the Runco product, are warranted for ninety (90) days from the date of shipment.

RuncoCare™ Eligibility

This Limited Warranty is valid only in the country where the Product was originally purchased and for the buyer who originally purchased the covered product from the authorized Runco dealer or distributor. This warranty is not transferable; it is not valid for any subsequent buyer (if any). You may be required to provide proof of purchase in order to receive warranty services.

---

1. Runco may update this list of products excluded from this warranty from time to time at Runco's sole discretion, but updates will not apply on a retroactive basis.
2. MSRP is defined as the most recent product price listed on Runco's price list.

RuncoCare™ Standard Claim Procedure

- In the event of a product defect, please follow the claim procedure provided below:

    A. Register your product if you have not yet done so. Visit http://www.runco.com/support/product-registration/ to register the product.

    B. Contact your original authorized dealer or distributor who sold the product.

    C. The dealer/distributor will contact Runco Technical Support via email at support@runco.com or via phone at 1-800-23-RUNCO (1-800-237-8626).

- The dealer/distributor will provide to Runco proof of purchase, serial number, product model number, description of the problem and any troubleshooting steps already attempted.

- Runco's technical support staff will attempt to assist the dealer/distributor in troubleshooting any technical issues that might be causing the product to malfunction. If Runco is unable to resolve the problem through troubleshooting, a Return Material Authorization (RMA) number will be issued for the exchange of the defective product if it is determined that the claim is covered by the warranty. Once an RMA has been created, RMA status is available at serviceorders@runco.com.

- If an RMA is issued, the dealer or customer will need to return the defective product to the Runco repair depot location specified by the Runco technical support representative. The dealer or customer will need to properly package the defective product in a suitable shipping container consisting of the product only, and not include any accessories (e.g., cables, remotes, carrying cases, lens, lens cap and other peripherals). Boxes may be purchased from a Runco technical support representative.

- The dealer or customer is responsible for paying freight charges and insurance to ship the defective product to the Runco repair depot location. If there are any shipping damages, the dealer or customer will need to address and resolve any shipping damage claims directly with the shipping company.

- Runco will not accept a returned product unless an RMA has been issued by Runco.

- For in-warranty repairs, Runco will pay freight charges to return the repaired/replacement product to the dealer/distributor from the Runco repair depot. For select countries or geographies Runco will ship via an economy express service. Return delivery time and availability may vary based on origin and destination, and Runco is unable to deliver to PO Box and FPO Box addresses.

- Note: in the 48 contiguous United States, other options for on-site service or advance exchange for the product may apply, if you purchased the Runco PremierCare™ Service Plan.

What to Include with Your Return

1. Return only the defective product with the lamp (if applicable).

2. Runco will not be responsible for returning or replacing any accessories (e.g., cables, remotes, carrying cases, lens, lens cap and other peripherals sold with the Runco product) that are returned with the defective product.

3. Repaired or replacement products will be shipped with a lamp (if applicable) but without any accessories.

RuncoCare™ Warranty Exclusions

This Limited Warranty does not include and is limited by the following:

1. Products not purchased from an authorized Runco dealer

2. Rental costs incurred by the customer in the event of product defect or failure

3. Any product with a defaced, modified, or removed serial number

4. Damage, deterioration, or malfunction resulting from:

   A. Accident, abuse, misuse, neglect, improper ventilation, fire, water, disaster, lightning, or other acts of nature, smoke exposure (cigarette or otherwise), unauthorized product modification (including use of an unauthorized mount), or failure to follow instructions supplied with the product

   B. Repair or attempted repair by anyone not authorized by Runco

   C. Any damage to the product due to shipment

   D. Removal or installation of the product

   E. Causes external to the product, such as electric power fluctuations or failure

   F. Use of supplies or parts (including lamps) that are not purchased from Runco or do not meet Runco's specifications

   G. Normal wear and tear

   H. Expected lamp degradation and normal decrease in lamp output over a period of time or as the lamp is consumed

   I. Customer caused defects, including but not limited to, scratched/defaced/altered plastics

   J. Failure to follow maintenance procedures as outlined in the product's user guide where a schedule is specified for regular cleaning of the product

   K. Opening the product and/or tampering with internal circuitry

   L. Products lost, stolen or discarded

   M. Any damage or dissatisfaction associated with latent images, "burnin," or any other damage determined by Runco to be the result of customer use patterns

   N. Any other cause, which does not relate to a product defect in material or workmanship

5. Removal, installation, and set-up service charges are excluded from the warranty.

6. Black uniformity issues or other LCD issues associated with usage outside the Runco recommended guidelines and specifications for the product.

7. Bright or dark sub pixels that are characteristic of LCD technology and considered by Runco to be acceptable and within Runco's manufacturing specifications.

   Specifically, it is not uncommon for one or more sub pixels to become bright or dark during or after the manufacturing process. A bright sub pixel is one that remains in the on position, and a dark sub pixel is one that appears black or off. The sub pixels are usually hard to see and will not detract from the display quality or usability at normal viewing distance. The following are Runco's criteria for identifying bright or dark sub pixels that would be considered unacceptable: a) the number of bright or dark sub pixels; b) the location of the bright or dark sub pixels; c) the color of the bright sub pixels; and d) the Runco model size. If sub pixels have been identified as unacceptable by Runco the LCD will be deemed faulty and will be replaced if reported within the warranty period.

Other Terms and Conditions

1. If the defective product is not properly packaged and is damaged in transit during its return to Runco, you may be invoiced for either the repair costs, if repairable, or the MSRP of a replacement product and shipping costs incurred by Runco.

2. The repaired or replaced product will assume the remainder of your original product's warranty term or 90 days from the date the repaired or replaced product is shipped, whichever is longer.

3. If a replacement product is sent, the replacement becomes the property of the customer and the defective product becomes the property of Runco.

RuncoCare™ Extended Service Options

Runco offers extended and expanded service plans. For information on additional product protection, please ask your authorized Runco dealer, email serviceorders@runco.com or call (toll free) (800) 23-RUNCO (800-237-8626).

Exclusion of Implied Warranties

RUNCO PROVIDES NO WARRANTIES, EXPRESS OR IMPLIED, EXCEPT THOSE EXPRESSLY PROVIDED IN THIS DOCUMENT. RUNCO EXPRESSLY DISCLAIMS AND EXCLUDES ALL OTHER WARRANTIES, INCLUDING THE IMPLIED WARRANTIES OF TITLE, NONINFRINGEMENT, MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Limitation of Liability; Exclusion of Damages

RUNCO'S MAXIMUM AGGREGATE LIABILITY IS LIMITED TO THE COST OF REPAIR, REPLACEMENT OR REFUND OF THE PRODUCT.

RUNCO WILL NOT BE LIABLE FOR DAMAGE TO OTHER PROPERTY OR FOR DAMAGES BASED UPON INCONVENIENCE, LOSS OF USE OF THE PRODUCT, LOSS OF TIME, LOSS OF PROFITS, LOSS OF BUSINESS OPPORTUNITY, LOSS OF GOODWILL, INTERFERENCE WITH BUSINESS RELATIONSHIPS, OR OTHER COMMERCIAL OR FINANCIAL LOSS, EVEN IF RUNCO IS AWARE OF THE POSSIBILITY OF SUCH DAMAGES AND EVEN IF A REMEDY HAS FAILED OF ITS ESSENTIAL PURPOSE.

RUNCO WILL NOT BE LIABLE FOR ANY CONSEQUENTIAL, INCIDENTAL, INDIRECT, EXEMPLARY, SPECIAL, PUNITIVE OR ANY OTHER TYPE OF DAMAGES, WHETHER THE CLAIM IS BASED ON CONTRACT, TORT, PRODUCT LIABILITY, NEGLIGENCE, STRICT LIABILITY OR ANY OTHER LEGAL OR EQUITABLE THEORY.

RUNCO WILL NOT BE LIABLE FOR ANY CLAIM AGAINST THE CUSTOMER BY ANY OTHER PARTY.

Effect of Local Law

This Limited Warranty gives you specific legal rights, and you may have other rights, which vary from locality to locality. Some localities do not allow limitations on implied warranties and/or do not allow the exclusion of incidental or consequential damages, so the above limitations and exclusions may not apply to you.
COPYRIGHT AND TRADEMARKS:

Important Safety Instructions

Thank you for your purchase of this quality Runco video product! It has been designed to provide you with the quality of video that is expected in a home theater. For the best performance, please read this manual carefully as it is your guide through the menus and operation.

CAUTION
RISK OF ELECTRIC SHOCK
DO NOT OPEN

CAUTION:
TO REDUCE THE RISK OF ELECTRIC SHOCK
DO NOT REMOVE COVER (OR BACK)
NO USER SERVICEABLE PARTS INSIDE.
REFER SERVICING TO QUALIFIED
SERVICE PERSONNEL.

WARNING
This symbol is intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock.

This symbol is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

1. Read these instructions.

2. Keep these instructions.

3. Heed all warnings.

4. Follow all instructions.

5. Do not use this apparatus near water.

6. Clean only with a dry cloth.

7. Do not block any of the ventilation openings. Install in accordance with the manufacturer's instructions.

8. Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.

9. Do not defeat the safety purpose of the polarized or grounding type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong is provided for your safety. When the provided plug does not fit into your outlet, consult an electrician for the replacement of the obsolete outlet.

10. Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles and the point where they exit from the apparatus.

11. Only use the attachments/accessories specified by the manufacturer.

12. Use only with a cart, stand, tripod, bracket or table specified by the manufacturer or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus to avoid injury from tip-over.

13. Unplug this apparatus during lightning storms or when unused for long periods of time.

14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

15. The +12V trigger only outputs 12Vdc signal for triggering. Do not connect to any other power input or output. This could cause damage to this unit.

16. Keep the packing material in case the equipment should ever need to be shipped.

17. Never look directly into the lens when the projector is on.

Compliance Information

Manufacturer's Name: Runco International, LLC

Manufacturer's Address: 1195 NW Compton Drive, Beaverton, OR 97006-1992

  hereby declares that the Products' Model Numbers:

Q-750d Ultra, Q-750d Ultra/CineWide and Q-750d Ultra/CineWide with AutoScope

conform with the provisions of:

Council Directive 2004/108/EC on Electromagnetic Compatibility;

EN 55022 "Limits and methods of measurements of radio interference characteristics of information technology equipment" 1998;

EN 55024 "Limits and methods of measurements of immunity characteristics of information technology equipment" 1998;

  Including:

- EN 61000-4-2 "Electromagnetic compatibility (EMC) Part 4: Testing and measurement techniques Section 2: Electrostatic discharge immunity test"
- EN 61000-4-3 "Electromagnetic compatibility (EMC) Part 4: Testing and measurement techniques Section 3: Radiated, Radio-Frequency, Electromagnetic Field Immunity Test"
- EN 61000-4-4 "Electromagnetic compatibility (EMC) Part 4: Testing and measurement techniques Section 4: Electrical fast transient/burst immunity test"
- EN 61000-4-5 "Electromagnetic compatibility (EMC) Part 4: Testing and measurement techniques Section 5: Surge immunity test"
- EN 61000-4-6 "Electromagnetic compatibility (EMC) Part 4: Testing and measurement techniques Section 6: Conducted disturbances induced by radio-frequency fields immunity test"
- EN 61000-4-8 "Electromagnetic compatibility (EMC) Part 4: Testing and measurement techniques Section 8: Conducted disturbances induced by power frequency magnetic fields immunity test"
- EN 61000-4-11 "Electromagnetic compatibility (EMC) Part 4: Testing and measurement techniques Section 11: Voltage dips, short interruptions and voltage variations immunity tests"

  And:

- EN 61000-3-2 "Electromagnetic compatibility (EMC) Part 3, Section 2: Limits for harmonic current emissions (equipment input current up to and including 16 A per phase)" 2000;
- EN 61000-3-3 "Electromagnetic compatibility (EMC) Part 3, Section 3: Limitations of voltage changes, voltage fluctuations and flicker in public low-voltage supply systems, for equipment with rated current up to and including 16 A and not subject to conditional connection" 1995;

Council Directive 2006/95/EC and amended by M1 and C1 on Low Voltage Equipment Safety;

EN 60950 "Safety of information technology equipment, including electrical business equipment"

The Technical Construction file required by this Directive is maintained at the corporate headquarters of Runco International, LLC, located at 1195 NW Compton Drive, Beaverton, OR 97006-1992.

Date of Declaration: October 2011

FCC PART 15:

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

INDUSTRY CANADA (ICES-003):

This Class B digital apparatus complies with Canadian ICES-003.

Cet appareil numérique de la classe B est conforme à la norme NMB-003 du Canada.

PRODUCT DISPOSAL:

The Product contains small amounts of tin, lead and/or mercury. Disposal of these materials may be regulated due to environmental considerations.

IMPORTANT RECYCLE INSTRUCTIONS

Hg Lamp(s) inside this product contain mercury. This product may contain other electronic waste that can be hazardous if not disposed of properly. Recycle or dispose in accordance with local, state, or federal Laws.

For more information, contact the Electronic Industries Alliance at WWW.EIAE.ORG.

For lamp specific disposal information check WWW.LAMPRECYCLE.ORG.

DISPOSAL OF OLD ELECTRICAL AND ELECTRONIC EQUIPMENT (Applicable throughout the European Union and other European countries with separate collection programs)

This symbol found on your product or on its packaging, indicates that this product should not be treated as household waste when you wish to dispose of it. Instead, it should be handed over to an applicable collection point for the recycling of electrical and electronic equipment. By ensuring this product is disposed of correctly, you will help prevent potential negative consequences to the environment and human health, which could otherwise be caused by inappropriate disposal of this product. The recycling of materials will help to conserve natural resources. This symbol is only valid in the European Union. If you wish to discard this product, please contact your local authorities or dealer and ask for the correct method of disposal.

1. Introduction

This Owner's Manual describes how to install, set up and operate the Runco Q-750d Ultra Series LED Home Theater Projector and DHD Controller.

Throughout this manual, the Runco Q-750d Ultra Series LED Home Theater Projector and DHD Controller are referred to collectively as the "Q-750d Ultra."

◄ *Target Audience*

Runco has prepared this manual to help home theater installers and end users get the most out of the Q-750d Ultra.

Runco has made every effort to ensure that this manual is accurate as of the date it was printed. However, because of ongoing product improvements and customer feedback, it may require updating from time to time. You can always find the latest version of this and other Runco product manuals on-line, at www.runco.com.

Runco welcomes your comments about this manual. Send them to support@Runco.com.

◄ *If You Have Comments About This Manual...*

Text Conventions: The following conventions are used in this manual, in order to clarify the information and instructions provided:

◄ *Textual and Graphic Conventions*

- Remote and built-in keypad button identifiers are set in upper-case bold type; for example, "Press **EXIT** to return to the previous menu."

- Computer input (commands you type) and output (responses that appear on-screen) is shown in monospace (fixed-width) type; for example: "To change the aspect ratio to Letterbox, type `LETTERBOX` **<Enter>**."

- All keys with functional names are initial-capped, set in bold type and enclosed in angle brackets. These keys are the following: **<Enter>**, **<Spacebar>**, **<Control>**, **<Esc>** and **<Tab>**.

- **<Enter>** indicates that you may press either the RETURN or ENTER key on your keyboard if it has both keys.

In addition to these conventions, underlining, boldface and/or italics are occasionally used to highlight important information, as in this example:

Note   *A carriage return **must** be used after each command or string.*

Graphic Conventions: These symbols appear in numerous places throughout the manual, to emphasize points that you must keep in mind to avoid problems with your equipment or injury:

Tip | *TIPS highlight time-saving short cuts and helpful guidelines for using certain features.*

Note | *NOTES emphasize text with unusual importance or special significance. They also provide supplemental information.*

Caution | *CAUTIONS alert users that a given action or omitted action can degrade performance or cause a malfunction.*

WARNING | *WARNINGS appear when a given action or omitted action can result in damage to the equipment, or possible non-fatal injury to the user.*

DANGER! | *DANGER appears when a given action can cause severe injury or death.*

Integrating Runco's award-winning controller/processor technology for flawless images from any source, the Q-750d Ultra sets new standards in projection with Runco's game-changing InfiniLight™ LED lampless technology, Personal Color Equalizer and Runco SmartColor.

Runco's revolutionary QuantumColor™ projectors pair energy-saving LED technology with proprietary Runco engineering to create unsurpassed performance and unrivaled customization. The Runco QuantumColor Q-750d Ultra maximizes the benefits of Runco's new InfiniLight™ lampless LED illumination technology to provide an infinite light source that creates an energy-efficient projector with the widest color gamut ever available in home theater projection.

The Q-750d Ultra comes with an external, all-digital signal processor/controller/scaler featuring advanced Vivix IV™ video processing, superb scaling (up to 1080p) and aspect ratio control. The Q-750d Ultra is enhanced further by significant horizontal and vertical lens shift capability for maximum installation flexibility.

But simply creating a projector platform with lampless technology and the largest color gamut isn't enough. Harnessing its incredible color options, Runco introduces its revolutionary new Personal Color Equalizer™, which allows color adjustment that includes those exactly defined by the cinematographer and the color preferences of each individual viewer for each source. Proprietary Runco Smart Color (RSC™) provides a hue compensation curve and gamut mapping that allows for lifelike, accurate flesh tones while increasing color saturation, without sacrificing the purity of other colors.

In addition to Runco's proprietary InfiniLight, Personal Color Equalizer and Runco Smart Color, the Q-750d Ultra can also be paired with Runco's award-winning CineWide™ and CineWide with AutoScope™ technology. CineWide provides uncompromised widescreen reproduction of movies originally filmed in the CinemaScope™ 2:35:1 format. It maintains constant vertical height on the screen just as in a movie theater. When a viewer transitions from 1.78:1 (16:9) program material to superwide 2.35:1, the image simply gets wider while full screen height is maintained, eliminating useless black bars on the top and bottom of the screen.

Runco CineWide is achieved through Runco's ingenious combination of software, electronics and precision anamorphic optics. With Runco CineWide, the projection system is able to use the full pixel array, thereby producing a 2.35:1 image with enhanced resolution and increased brightness. No resolution or image area is lost to those black bars that contain no picture information. CineWide with AutoScope provides a motorized, remote-controlled anamorphic lens mechanism.

⚠ *Note*	*CineWide requires the use of a 2.35:1 (or similar aspect ratio), "superwide" format screen.*

Discrete IR and RS-232 control make custom installation seamless, while discrete source and aspect ratio selection accommodate any automation control system.

**1.3
Description, Features
and Benefits**

Key Features and Benefits ➤ The Q-750d Ultra offers these key features and benefits:

- Full-HD Native Resolution: 1920 x 1080 (16:9 Native Aspect Ratio)
- InfiniLight™ lampless LED illumination technology provides an infinite, energy-efficient light source
- Four (4) HDMI Inputs (on DHD Controller) with High-bandwidth Digital Content Protection (HDCP)
- HDTV Compatible
- ConstantContrast™ provides automatic, real-time LED drive adjustment, maximizing contrast ratio and dynamic range especially in dark scenes

Parts List ➤ Your Q-750d Ultra is shipped with the following items. If any items are missing or damaged, please contact your Runco dealer or Runco Customer Service at (800) 23-RUNCO.

- Q-750d Ultra Series LED Home Theater Projector and DHD Controller
- Long-throw primary lens, 2.40:1-4.00:1
- Remote Control Unit and two (2), AAA-size batteries
- AC Power Cords (2)
- Serial Port Adapter, RJ-11 Female to DB-9 Male
- RJ-11 Telephone Cable, 50 feet (15.24 meters)
- HDMI-to-HDMI Cable, sold separately (refer to **Optional Accessories**, below)
- 5.0-mm Hex wrench (for lens shift adjustment)
- Rack-mount hardware for the DHD Controller
- Runco Q-750d Ultra Quick Setup Guide

Optional Accessories:

- CineWide™ technology (fixed, secondary anamorphic lens)
- CineWide™ with AutoScope™ system (secondary anamorphic lens and motorized mount)
- Ceiling mount kit (part number 956-0074-00)
- HDMI-to-HDMI Cable, length specified at time of order:
  - 16.4 feet (5.0 meters) (part number 903-1010-00)
  - 24.6 feet (7.5 meters) (part number 903-1011-00)
  - 32.8 feet (10.0 meters) (part number 903-1012-00)
  - 49.2 feet (15.0 meters) (part number 903-1013-00)
  - 65.6 feet (20.0 meters) (part number 903-1014-00)

2. Controls and Functions

Figure 2-1 shows the key Q-750d Ultra components.
Figure 2-1. Q-750d Ultra Front/Bottom/Side/Top Views

- **TOP IR SENSOR**
  Receives infrared signals from the remote control unit.

- **INTAKE VENT**
  Internal fans draw cool air into the projector through this vent.

- **RUNCO LOGO**
  The logo can be rotated to match the projector orientation: inverted (ceiling-mounted) or upright. To rotate the logo, grip it at the sides, pull it away from the projector and rotate it 180 degrees.

- **FOCUS RING**
  Rotate this to focus the projected image.

- **PROJECTION LENS**

- **FRONT BEZEL RETAINING SCREW**
  Loosen this screw to allow removal of the decorative front bezel, which provides access to the lens shift controls (refer to *Lens Shift* on page 44).

- **ZOOM RING**
  Rotate this to change the projected image size.

- **FRONT IR SENSOR**
  Receives infrared signals from the remote control unit.

- **EXHAUST VENT**
  Warm air exits the projector through this vent. Ensure that it is not blocked.

- **STATUS LED**
  Indicates projector status as follows:

  - Solid green = AC power present, ready to turn on.

  - Flashing green = Projector is initializing; keypad functions not allowed.

  - Off = **Normal operation.**

  - Flashing red = Over temperature, user intervention (clear vents, turn on AC) may fix problem

  - Solid red = Error that requires servicing (fan failure, Power-on Self-Test (POST) failure).

2.2
Q-750d Ultra Rear Panel

Figure 2-2 shows the Q-750d Ultra rear panel.
Figure 2-2. Q-750d Ultra Rear Panel

1. **RS-232C INPUT (9-pin, female D-Sub)**
   Connect the **Display Control** output on the DHD Controller to this input (see Figure 2-4).

2. **DHD INPUT**
   An HDCP-compliant digital video input for connecting the HDMI output from the DHD Controller.

3. **POWER INPUT (100 to 240 VAC)**
   Connect the Q-750d Ultra to power here.

Figure 2-3 shows the controls and indicators on the DHD Controller front panel; the paragraphs that follow describe them.

2.3
DHD Controller Front Panel
Figure 2-3. DHD Controller Front Panel

1. **RUNCO ICON**
   Lights blue to indicate that the controller is on or powering up.

2. **IR SENSOR**
   Receives IR commands from the remote control.

3. **VACUUM FLUORESCENT DISPLAY**
   Can be used instead of the On-Screen Display (OSD). Displays currently-selected menu or – if no menu is selected – the connected display device model, current source, input resolution and aspect ratio/screen.

4. **ON/STANDBY BUTTON**
   Press once to toggle from standby mode to on mode. Press it again to return to standby mode. For a discrete on or off command, you can use the direct access buttons on the remote control.

5. **LEFT BUTTON**
   Used to direct-select inputs or move the menu cursor left in the OSD. When no menu is present on-screen, the **LEFT** button toggles through the different sources, in this order:
   HDMI 4 - HDMI 3 - HDMI 2 - HDMI 1 - SCART - HD 2 - HD 1 - Component - Composite 3 - Composite 2 - Composite 1

6. **DOWN BUTTON**
   Use to direct-select aspect ratios or move the menu cursor down in the OSD. When no menu is present on-screen, this button toggles through the different aspect ratios, in this order:
   16:9 - 4:3 - Letterbox - VirtualWide - Cinema - Virtual Cinema - Native

   Note *For more information about aspect ratios, refer to Table 4-1.*

7. **RIGHT BUTTON**
Used to direct-select inputs or move the menu cursor right in the OSD. When no menus are present on-screen, the **RIGHT** button toggles through the different sources, in this order:
Composite 1 - Composite 2 - Composite 3 - Component - HD 1 - HD 2 - SCART - HDMI 1 - HDMI 2 - HDMI 3 - HDMI 4

8. **MENU BUTTON**
Press the **MENU** button to bring up the main menu, or to exit the current menu and return to the previous one.

9. **UP BUTTON**
Use to direct-select aspect ratios or move the menu cursor up in the OSD. When no menus are present on-screen, the **UP** button toggles through aspect ratios in the following order:
Native - Virtual Cinema - Cinema - VirtualWide - Letterbox - 4:3 - 16:9

10. **ENTER BUTTON**
When an item is highlighted on the OSD, the **ENTER** button selects the item.

11. **STANDBY LED**
Lights amber when the DHD Controller is in standby mode; otherwise it is off.

2.4 DHD Controller Rear Panel

Figure 2-4 shows the rear connector panel on the DHD Controller.
Figure 2-4. DHD Controller Rear Panel

1. **MAIN POWER SWITCH**
Disconnects or applies power to the DHD Controller.

2. **TRIGGERS**
Connection for up to three (3), 12-volt trigger-controlled devices such as retractable screens or screen masks. Output current is limited to 250 milliamperes (mA).

3. **USB**
A standard, USB Series "B" connection to a personal computer, for performing software upgrades and other service procedures.

4. **RS-232 (To Accessory Box)**
   A male, 9-pin D-sub connector for interfacing with external equipment. (For future use.)

5. **Display Control**
   Connect this to the RS-232 input on the Q-750d Ultra projector.

6. **IR**
   Wired input from a Niles- or Xantech-compatible, infrared (IR) repeater system. It is a 3.5-mm, mini phono jack, wired as follows:
   Ring = No connection
   Tip = IR Input
   Sleeve = Ground

7. **POWER INPUT (100 to 240 VAC)**
   Connect the DHD Controller to power here.

8. **HD1 / HD2 (5 x Analog BNCs)**
   Two inputs (five BNCs per input) for connecting standard-definition (SD = 480i/576i), enhanced-definition (ED = 480p/576p) or high-definition (HD = 720p/1080i/1080p) component video sources, or RGBHV sources such as personal computers.

9. **Component / SCART (3 x RCA connectors)**
   SD/HD input for connecting SDTV, EDTV or HDTV component video sources. Also provides RGB input for SCART RGBS sources.

10. **Video 1 / Video 2 / Video 3**
    Standard, composite video inputs for connecting a VCR, camcorder or other composite video source. The Video 1 input also provides composite sync input for SCART RGBS sources.

11. **HDMI 1 / HDMI 2 / HDMI 3 / HDMI 4 (Digital)**
    HDCP-compliant digital video inputs for connecting an HDMI or DVI source.

12. **Ethernet**
    A female RJ-45 connector for wired network communications.

13. **HDMI Out (Audio Only)**
    Connect this output to an audio control system to pass through HDMI audio.

14. **HDMI Out (To Display)**
    Connect this to the **DHD Input** on the Q-750d Ultra (see Figure 2-2).

15. **RS-232 (PC / Control)**
    A female, 9-pin D-sub connector for interfacing with a PC or automation/control system.

2.5
Q-750d Ultra Remote
Control Unit

Figure 2-5 shows the Q-750d Ultra remote control, and the paragraphs that follow describe its functionality.
Figure 2-5. DHD Controller/Q-750d Ultra Remote Control

1. **IR OUTPUT INDICATOR**
   Lights when a button is pressed to indicate that an IR signal is being transmitted.

2. **LIGHT**
   Press to illuminate the buttons.

3. **ON / OFF**
   Press to turn the DHD Controller and projector on or off.

4. **ENTER**
   Press to select a highlighted menu item or confirm a changed setting.

5. **Cursor Buttons (▲, ◀, ▼, ▶)**
   Use these buttons to select items or settings, adjust settings or switch display patterns.

   When no menu is present on-screen, the **UP** and **DOWN** buttons toggle through the available aspect ratios, in this order:
   UP Button = Native - Virtual Cinema - Cinema - VirtualWide - Letterbox - 4:3 - 16:9
   DOWN Button = 16:9 - 4:3 - Letterbox - VirtualWide - Cinema - Virtual Cinema - Native

   > **Note**   *For more information about aspect ratios, refer to Table 4-1.*

   Likewise, the **LEFT** and **RIGHT** buttons toggle through the different source inputs, in this order:
   LEFT Button = HDMI 4 - HDMI 3 - HDMI 2 - HDMI 1 - SCART - HD 2 - HD 1 - Component - Composite 3 - Composite 2 - Composite 1
   RIGHT Button = Composite 1 - Composite 2 - Composite 3 - Component - HD 1 - HD 2 - SCART - HDMI 1 - HDMI 2 - HDMI 3 - HDMI 4

6. **EXIT**
   Press this button to exit the current menu and return to the previous one.

7. **MENU**
   Press this button to access the OSD controls, or to exit the current menu and return to the previous one.

8. **Memory Preset Buttons:**

   ISF NIGHT
   Press to recall settings for the current input from the "ISF Night" memory preset.

   ISF DAY
   Press to recall settings for the current input from the "ISF Day" memory preset.

   CUST 1
   Press to recall settings for the current input from the "Custom 1" memory preset.

   CUST 2
   Press to recall settings for the current input from the "Custom 2" memory preset.

9. **VID 1 (1) / VID 2 (2) / VID 3 (3)**
   Press to select a composite video input as the source or to enter the numeric character "1," "2" or "3."

10. **HD 1 (4) / HD 2 (5)**
    Press to select a HD (RGBHV or YPbPr component) input or to enter the numeric character "4" or "5."

11. **COMP (Component) (6)**
    Press to select the Component video input as the source or to enter the numeric character "6."

12. **HDMI 1 (7) / HDMI 2 (8) / HDMI 3 / HDMI 4 (0)**
    Press to select an HDMI input as the source or to enter the numeric character "7," "8" or "0."

13. **SCART (9)**
    Press to select the SCART video input as the source or to enter the numeric character "9."

14. **Aspect Ratio Selection Buttons**
    Use these buttons to select an aspect ratio directly, as follows:

    NATIVE
    Displays the source signal in its native resolution, centered in the display area.

    16:9
    For viewing 16:9 DVDs or HDTV programs in their native aspect ratio.

    4:3
    Scales the input signal to fit 4:3 display mode in the center of the screen.

    LETBOX (Letterbox)
    For viewing non-anamorphic ("full-screen") DVDs on a 16:9 screen.

    V-WIDE (VirtualWide)
    Enlarges a 4:3 image horizontally in a non-linear fashion to fit 16:9 full screen display.

    CINEMA
    For viewing 2.35:1 source material.

    V-CINE
    Selects the Virtual Cinema aspect ratio, used for viewing 16:9 source material on a 2.35:1 screen.

> ⚠ **Note**   *Installation **must** be performed by a qualified custom video installation specialist.*

To install batteries in the remote control:

1. Press down the tab on the cover and pull the cover in the direction of the arrow.

2. Insert the included batteries. Ensure that the polarities correctly match the ⊕ and ⊖ markings inside the battery compartment.

3. Insert the lower tab of the cover into the opening, and press down the cover until it clicks in place.
- Make sure that the battery polarities are correct when installing the batteries.

◄ ***Notes on Batteries***

- Do not mix an old battery with a new one or different types of batteries.

- If you will not use the remote control for a long time, remove the batteries to avoid damage from battery leakage.

- Do not expose batteries to excessive heat such as from sunshine, fire or the like.

- Make sure that there is nothing obstructing the infrared beam between the remote control and the IR receiver on the DHD Controller.

◄ ***Notes on Remote Control Operation***

- If the effective range of the remote control decreases, or it stops working, replace the batteries with new ones.

- The remote control may fail to operate if the infrared remote sensor is exposed to bright sunlight or fluorescent lighting.

- Ambient conditions may possibly impede the operation of the remote control. If this happens, point the remote control at the DHD Controller, and repeat the operation.

3.2
Quick Setup

Table 3-1 gives a quick overview of the Q-750d Ultra installation process. The sections following this one provide detailed instructions.

Table 3-1. Installation Overview

Step	Procedure	For Details, Refer to page...
1	Choose a location for the projector	15
2	Install primary projection lens	21
3	Install CineWide lens mounting assembly (stationary base plate or AutoScope lens motor – optional)	24
4	Mount the projector	30
5	Connect the DHD Controller to the projector	31
6	Connect signal sources to the DHD Controller	33
7	Connect other external equipment to DHD Controller (optional): • Audio processor or secondary display device • Automation/control system (RS-232) • 12-volt trigger-activated equipment (AutoScope lens motor, retractable screens or screen masking etc.) • External IR repeater • Network hub, router or gateway (Ethernet)	39
8	Connect projector, DHD Controller and lens motor (if present) to AC power and power up	42
9	Adjust primary lens: projected image size (zoom), position (shift) and focus; copy and paste settings as needed	18, 44
10	For rear-screen and/or ceiling-mount installations, select the proper picture orientation	44
11	Use Image Alignment controls to fine-tune image geometry	45
12	Install and adjust CineWide anamorphic lens (optional)	47
13	Display calibration: adjust the following for each input and display mode (resolution and frame rate); save settings when finished: • Aspect ratio • Brightness • Contrast • Color level • Tint • Sharpness • White Balance	55

Proper installation of your projector will ensure the quality of your display. Whether you are installing a projector temporarily or permanently, you should take the following into account to ensure your projector performs optimally.

Choose the installation type that best suits your needs: front or rear screen, floor mount or inverted mount. Table 3-2 compares these various installation methods.

3.3 Installation Considerations

◄ *Installation Type*

Table 3-2. Projector Installation Options

Advantages	Considerations
Front Screen, Floor Mount Installation	
• Easy to set up • Can be moved or changed quickly • Easy to access	• Shares floor space with audience
Front Screen, Inverted Mount (ceiling) Installation	
• Does not take up audience space • Projector is unobtrusive • Projector cannot be accidentally moved	• Installation is more permanent • Projector access is more difficult
Rear Screen, Floor Mount Installation	
• Projector is completely hidden • Projector is easily accessed • Usually good ambient light rejection	• Requires separate room • Installation cost is usually higher
Rear Screen, Inverted Mount (ceiling) Installation	
• Projector is completely hidden • Usually good ambient light rejection	• Requires separate room • Installation cost is usually higher
Rear Screen, Floor Mount with Mirror	
• Projector is completely hidden • Usually good ambient light rejection • Requires less space behind screen than other rear screen installations	• Requires separate room • Installation cost is usually higher

Ambient Light ➤ In general, minimize or eliminate light sources directed at the screen. Contrast ratio in your images will be noticeably reduced if light directly strikes the screen, such as when a shaft of light from a window or floodlight falls on the image. Images may then appear washed out and less vibrant.

Throw Distance ➤ Throw distance is the distance measured from the front of the projector to the screen. This is an important calculation in any projector installation as it determines whether or not you have enough room to install your projector with a desired screen size and if your image will be the right size for your screen.

You can quickly estimate the throw distance by taking the width of the screen and multiplying it by the lens throw ratio; see Figure 3-1. The result of this calculation tells you roughly how far back the projector should be positioned from the screen in order to project a focused image large enough to fill the screen.

Estimating Throw Distance
Throw Distance (TD) = Screen Width (w) x Lens Throw Ratio
Figure 3-1. Estimating Throw Distance

Table 3-3 lists the available lens options for the Q-750d Ultra and their associated throw ratios.

Table 3-3. Throw Ratios for the Q-750d Ultra Series (Note)

Projector Model	Throw Ratio with Primary Lens Only	Throw Range in inches, with 72.6x40.8-inch (1.78:1) Screen		Throw Ratio with Primary Lens and Anamorphic Lens	Throw Range in inches, with 96x40.8-inch (2.35:1) Screen	
		Minimum	Maximum		Minimum	Maximum
Standard Q-750d Ultra	2.40 – 4.00	174.24	290.40	(n/a)		
Q-750d Ultra/CineWide	(n/a)			1.80 – 3.00	172.80	288.00
Q-750d Ultra/CineWide with AutoScope	2.40 – 4.00	174.24	290.40	1.80 – 3.00	172.80	288.00
Note: *Due to normal manufacturing variances, throw distance can vary by up to +/- 5 percent from these specifications.*						

Vertical and Horizontal ➤ Position   Proper placement of the projector relative to the screen will yield a rectangular, perfectly-centered image that completely fills the screen.

Ideally, the projector should be positioned perpendicular to the screen and in such a way that the lens center is aligned with either the top or bottom edge of the screen area, and centered horizontally. See Figure 3-2.

Ceiling Installation
Floor Installation
Figure 3-2. Projector Placement

Vertical and Horizontal ➤ Lens Shift   You can use the lens shift controls to center the image on the screen. Lens shift is generally expressed as a percentage of the screen height or width, as shown in Figure 3-3 and Figure 3-4.
*Note: This is a general example of lens shift. Lenses vary in their shift capabilities. **No particular lens or projector is used in this example.***

Figure 3-3. Vertical Lens Shift (EXAMPLE ONLY)
Note: *This is a general example of lens shift. Lenses vary in their shift capabilities. **No particular lens or projector is used in this example.***

Figure 3-4. Horizontal Lens Shift (EXAMPLE ONLY)

Vertical Lens Shift: The Q-750d Ultra provides up to 35% of vertical lens shift up or down. For example, with a 100 x 56 inch (1.78:1) screen, you can shift the image up to 19.60 inches (0.50 meters) above or below the screen center.

Horizontal Lens Shift: The Q-750d Ultra provides up to 7.5% of horizontal lens shift left or right. For example, with a 100 x 56 inch (1.78:1) screen, you can shift the image up to 7.50 inches (0.19 meters) left or right of the screen center.

Folded Optics ➤ In rear screen applications where space behind the projector is limited, a mirror may be used to fold the optical path, as shown in Figure 3-5. The position of the projector and mirror must be accurately set. If you are considering this type of installation, contact your dealer for assistance.
Figure 3-5. Folded Optics

Audio/Video ➤ Due to its extraordinarily high level of video processing performance, the DHD Controller **Synchronization Issues** may distribute video signals with a perceptible level of audio latency. In order to easily solve this issue, Runco recommends using the DHD Controller with a high-quality audio receiver that has the ability to effectively synchronize audio and video signals.

Most mainstream audio receiver/switchers have the ability to synchronize the audio and video to the Advanced Television Systems Committee (ATSC) prescribed tolerances. According to the ATSC, the sound program should never lead the video program by more than 15 milliseconds, and should never lag behind the video program by more than 45 milliseconds.

In addition, many video displays and A/V receivers introduce additional latency that needs to be compensated for during the installation. Table 3-4 shows the amount of possible audio latency given different signal input timings.

Table 3-4. Possible Audio Latency for Various Input Timings

Input Timing	Possible Audio Latency (milliseconds)
480i	133
480p	83
576i	160
576p	100
720p/50	100
720p/60	83
1080i/25	160
1080i/30	133
1080p/24	125
1080p/50	80
1080p/60	67

Other considerations and tips that can help improve your installation:

- Keep the ambient temperature constant and below 35°C (95°F). Keep the projector away from heating and/or air conditioning vents. Changes in temperature may cause drifts in the projector circuitry, which may affect performance.

- Keep the projector away from devices that radiate electromagnetic energy such as motors and transformers. Common sources of these include slide projectors, speakers, power amplifiers and elevators.

The Q-750d Ultra primary projection lens is shipped separately from the projector. Proceed as follows to install it:

3.4
Installing the Primary Projection Lens

1. Carefully remove the projector from the shipping container and place it on a flat surface.

◄ *Removing the Projector Front Bezel*

2. Loosen the Phillips screw at the bottom of the decorative bezel on the front of the projector.

3. Grasp the bezel by the front, then rotate and lift it upward to remove it. (Don't pull it straight out.)

4. Remove the foam plug from the lens cavity.
Installing the Lens ➤   5. Carefully remove the lens and other installation hardware (in a small plastic bag) from the shipping container.

6. Remove the rear cap from the lens. This protective cap is only used during shipping to protect the lens from damage.

7. Remove the front cap from the lens.

8. Install the spring clip (provided with the lens) on the vertical lens shift adjuster retaining slot, as shown. The clip reduces backlash in the vertical offset mechanism to keep it from inadvertently moving after adjustment.
9. Insert the lens, with the small white label facing up, into the lens cavity. Ensure that the notch on the vertical lens shift adjuster mates with the retaining slot on the projector, as shown below. Otherwise, the adjuster won't work correctly.

**Label
Faces
Up**

10. Install the two (2), black plastic retaining clips (also provided with the lens) on either side of the lens cavity. Each clip is held in place with two (2), captive Phillips screws. The white, plastic standoffs serve as "handles" to make removing the clips easier.
11. Attach the stray light shield (provided with the lens) to the top of the projector as shown below.
12. Replace the front lens bezel.

13. Tighten the Phillips screw on the bottom of the bezel to secure it.

3.5
Installing the Optional CineWide/AutoScope Lens Mount

If you are installing a standard (non-CineWide) Q-750d Ultra, skip this step and proceed with **Mounting the Q-750d Ultra** (page 30).

If you are installing a Q-750d Ultra/CineWide, proceed with **Installing the Fixed CineWide Base Plate (Q-750d Ultra/CineWide)** (page 29).

If you are installing a Q-750d Ultra/CineWide with AutoScope, proceed as follows to install the AutoScope lens motor.

Note

1. Do not install the CineWide lens yet, only the fixed CineWide base plate or AutoScope lens motor. You will install the CineWide lens after you install the projector and adjust the primary lens.

2. Some components shipped with your projector may differ slightly from what is shown in these instructions.

Figure 3-6 shows the Q-750d Ultra/CineWide with AutoScope motor assembly.

◄ ***Installing the AutoScope Lens Motor (Q-750d Ultra/CineWide with AutoScope)***
Figure 3-6. Q-750d Ultra/CineWide with AutoScope Motor Assembly – Exploded View

Remove Projector Front Feet:

Place the projector upside down on a blanket or other soft surface. Loosen and remove the two front feet on the projector.
Install Ceiling Mount Adapters/Projector Stands: For ceiling installations, these brackets bring the mounting points for the projector mounting plate (included with the projector ceiling mount kit) from the bottom of the projector up and around the AutoScope lens motor housing. For floor installations (where the projector is upright), the adapters allow the projector to lie flat on the mounting surface.

Using six (6) each of the supplied, M6 x 12mm Pan-Head Phillips screws (item #2), attach the AutoScope Ceiling Mount Adapters/Projector Stands (items #3 and #4) to the projector as shown in Figure 3-7.
Figure 3-7. Q-750d Ultra with Ceiling Mount Adapters/Projector Stands

⚠️ **Caution**   *DO NOT OVER-TIGHTEN THE SCREWS.*

Install Lens Motor:

1. Position the AutoScope Lens Motor as shown in Figure 3-8.

2. Line up the mounting holes on the lens motor housing with those on the underside of the projector.

3. Secure the motor to the projector with the eight (8) remaining M6 x 12mm Pan-Head Phillips screws.
Figure 3-8. AutoScope Lens Motor Installation

After you have installed the AutoScope lens motor, proceed with ***Mounting the Q-750d Ultra*** (page 30).

Figure 3-9 shows the anamorphic lens base plate assembly for a Q-750d Ultra/CineWide.

◄ *Installing the Fixed CineWide Base Plate (Q-750d Ultra/CineWide)*
Figure 3-9. Q-750d Ultra/CineWide with Anamorphic Lens Base Plate and Ceiling Mounting Rails - Exploded View

To install the fixed CineWide base plate on a Q-750d Ultra/CineWide:

1. Place the projector upside down on a blanket or other soft surface.

2. Place the CineWide base plate on the bottom of the projector.

3. **If you are mounting the projector on a ceiling:** Line up the three holes on the left and right mounting rails (included with the projector ceiling mount kit) with those on the projector and base plate.

4. Secure the CineWide base plate (and ceiling mounting rails, if needed) to the projector with the Pan-Head Phillips screws provided with the CineWide lens base plate.

> ⚠ **Caution**
>
> 1. **Do not use the mounting screws provided with the ceiling mounting kit.** *Use only the hardware provided with the CineWide lens base plate.*
>
> 2. *DO NOT OVER-TIGHTEN THE SCREWS.*

3.6 Mounting the Q-750d Ultra

There are several methods for mounting the projector. Depending on your chosen installation, one method may be more suitable than another.

Floor Mounting (Upright) ➤

In typical front and rear screen installations, the projector can be mounted to a secure and level surface such as a table or cart. Carts are useful when moving a projector during a presentation or from site to site. If possible, lock the wheels when it's in position to prevent it from being moved during a presentation.

Ceiling Mounting (Inverted) ➤

For fixed installations, and for those that want the projector out of sight or have a limited space for projector and audience, you can invert the Q-750d Ultra and suspend it from the ceiling using a specially-designed ceiling mount fixture.

> 🖐 **Note**
>
> *Use only the Runco-approved ceiling mount kit designed for your projector. Install the mount kit according to the instructions provided with it.*

The projector can also be inverted and placed in an enclosure above and behind the viewing area. Install four feet on the inside bottom surface of the enclosure on which the projector can rest. A variety of materials can be used for this purpose (for example, rubber crutch tips or turntable feet).

Adjusting the Projection Angle ➤

If the Q-750d Ultra is ceiling-mounted and the screen is significantly lower than the projector, you can tilt the projector at a slight angle by adjusting the ceiling mount.

If you do this, you may need to shift the image using the on-screen display (OSD) controls, to compensate. For detailed instructions, refer to **Using the On-Screen Menus** on page 53.

Proceed as follows to connect the DHD Controller to the Q-750d Ultra, your video sources, external controller(s) – if present – and AC power.

When connecting your equipment:

- Turn off all equipment before making any connections.

- Use the correct signal cables for each source.

- For best performance and to minimize cable clutter, use high-quality cables that are only as long as necessary to connect two devices. (Don't use a 20-foot cable when a 6-foot cable will suffice.)

- Ensure that the cables are securely connected. Tighten the thumbscrews on connectors that have them.

To access the connector panel, pull firmly on the cable access cover to open it.

Digital Video Connection: Connect the HDMI Output of the DHD Controller to the DHD Input of the Q-750d Ultra as shown in Figure 3-10.
**3.7
Connections to the Q-750d Ultra and DHD Controller**

◄ *Connector Panel Access*

◄ *Connecting the DHD Controller to the Q-750d Ultra*
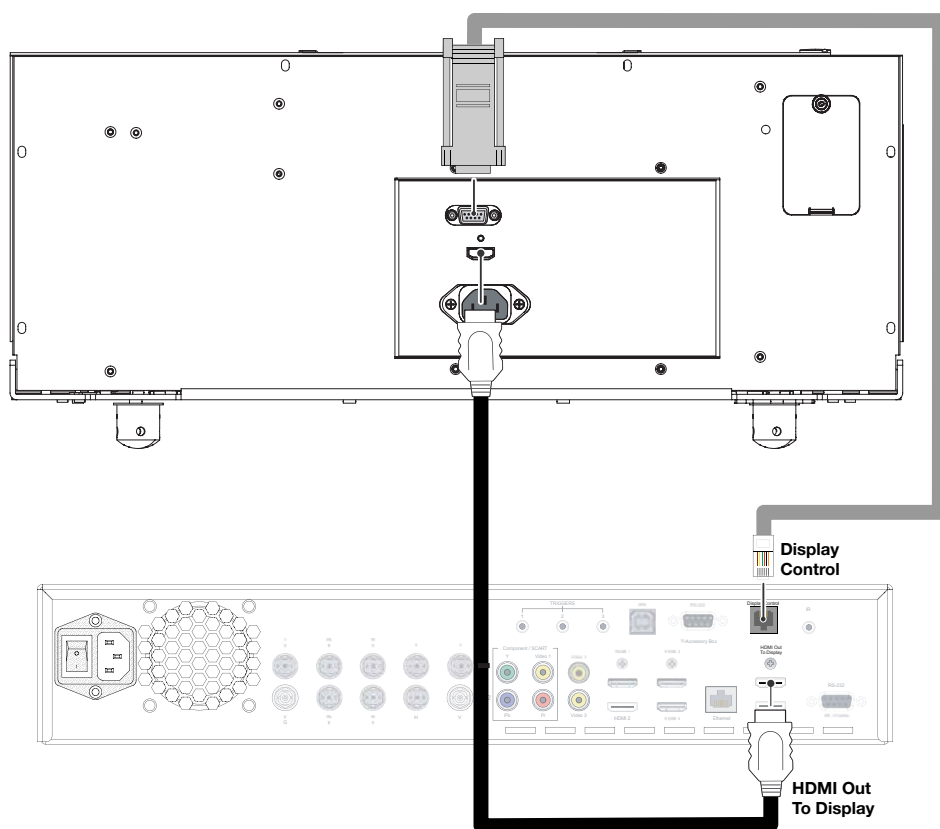

Figure 3-10. Connecting the Q-750d Ultra to the DHD Controller

RS-232 Connection: Connect the **Display Control** output from the DHD Controller to the **RS-232** input on the Q-750d Ultra. Use a standard, modular telephone cable with RJ11 plugs at both ends. On the Q-750d Ultra end, use the provided RJ11-to-DB9 adapter. This adapter is wired as shown in Figure 3-11.
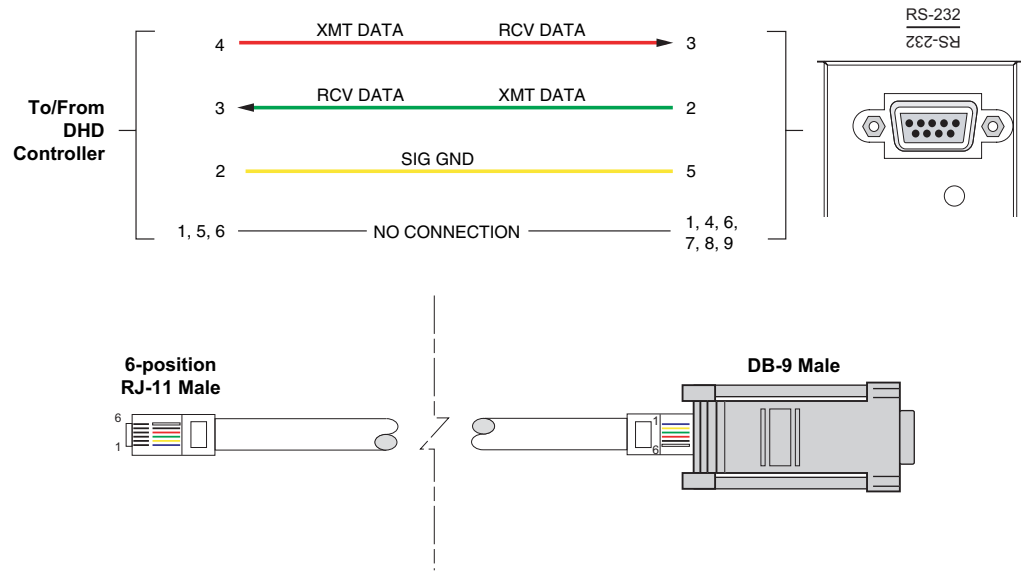

Figure 3-11. RS-232 Connection from the DHD Controller to the Q-750d Ultra

Connect your video sources to the DHD Controller as shown and described in the sections that follow.

◄ *Connecting Source Components to the DHD Controller*

HDMI Source Connections: See Figure 3-12.

![Tip icon] **Tip**
Use the HDMI inputs whenever possible. This ensures the highest video quality because the signal is carried in the digital domain throughout the entire signal path, from source component output into the projector.

![Note icon] **Note**
*You can also connect computers with DVI output to these inputs. Refer to **Supported Timings** on page 115 for a list of compatible input signals.*
Figure 3-12. HDMI Source Connections

Installation

Component Video Source Connections: Connect your component video sources to the HD1, HD2 and/or Component/SCART inputs as shown in Figure 3-13.
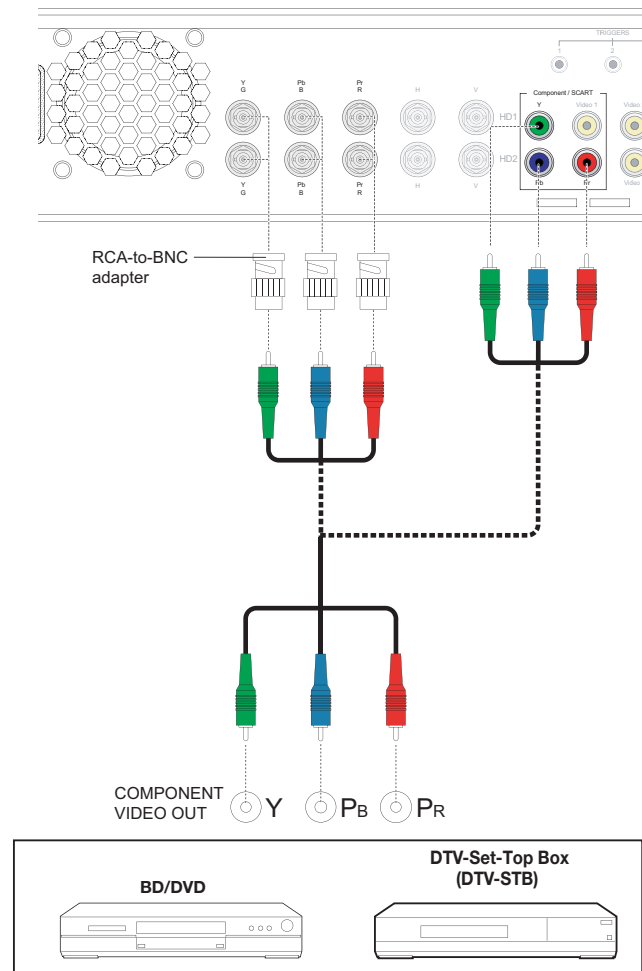

Figure 3-13. Component Video Source Connections

RGBHV Source Connections: Connect personal computers and/or other RGB sources to the HD1 and/or HD2 inputs as shown in Figure 3-14.
Figure 3-14. RGBHV Source Connections

SCART RGBS Source Connections: Connect the green, blue and red outputs from your SCART source to the Component/SCART input on the DHD Controller. Connect the sync output from your SCART source to the **Video 1** input on the DHD Controller. See Figure 3-15.
Figure 3-15. SCART RGBS Source Connections

Composite Source Connections: See Figure 3-16.
Figure 3-16. Composite Video Source Connections

Connecting an Audio Processor or Secondary Display Device to the DHD Controller (Optional) ➤

The DHD Controller provides a second HDMI output (labeled **HDMI Out (Audio Only)**) for connection to an audio receiver/switching system or secondary display device for monitoring purposes. See Figure 3-17.

> ⚠ **Note**
>
> *The DHD Controller does not transmit HDMI CEC control messages from the "HDMI Audio Out" connector. For more information about CEC, refer to **Using HDMI CEC Messages** on page 106.*
Figure 3-17. Audio Processor Connection to DHD Controller

The DHD Controller provides the following interfaces to external equipment that allow it to control or be controlled by that equipment:

• An RS-232 interface to a PC or control/automation system;

• Three (3), 12-volt trigger outputs;

• An infrared (IR) repeater input;

• An Ethernet network interface for firmware updates and maintenance notifications.

The following sections describe how to make these interface connections. For more information about using these connections, refer to **Network** on page 76 and **External Control** on page 87.

RS-232 Controller Connection: Use a straight-through, 9-pin RS-232 cable to connect a PC or control/automation system (if present) to the RS-232 port on the DHD Controller; see Figure 3-18.

Connecting an External IR Receiver to the DHD Controller: If infrared signals from the remote control cannot reach the DHD Controller due to excessive distance or obstructions such as walls or cabinet doors, you can connect an external IR receiver to extend the range of the remote control. See Figure 3-20.
Figure 3-20. External IR Receiver Connection

Ethernet Network Connection: Use a standard, Category 5 network cable with an RJ-45 plug to connect a network hub, router or gateway to the Ethernet port on the DHD Controller; see Figure 3-21. For more information about configuring and using this connection, refer to ***Network*** on page 76.

Hub, Router
or Gateway

1 Transmit Data +
2 Transmit Data -
3 Receive Data +
6 Receive Data -
Figure 3-21. Ethernet Network Connection to DHD Controller

Connecting to AC Power ➤   **Projector/DHD Controller:** Plug the female end of one power cord into the AC receptacle on the rear of the Q-750d Ultra (AC 100V ~ 240V). Then, connect the other end to your AC power source.

Similarly connect the DHD Controller to a nearby AC outlet.

AutoScope Lens Motor: With AutoScope-equipped projectors, an additional power cord is provided for the lens motor. Plug the female end of the AC power cord into the AC input on the rear of the lens motor assembly. Connect the other end to your AC power source.

1. Turn on your source components.

2. Turn on the main power switch at the rear of the DHD Controller.

3. If this is an AutoScope-equipped projector, turn on the main power switch at the rear of the AutoScope lens motor. The lens motor power switch is located next to the AC input.

4. Press the **ON** button on the remote control (or the **ON/STANDBY** (⏻) button on DHD Controller front panel) to turn on the system. The vacuum fluorescent display on the DHD Controller front panel briefly displays "Initializing System," followed by "Starting Q-750d Ultra." On the projector, the LED flashes green to indicate that it is warming up.

5. When the projector is ready for use, the LED turns off. On the DHD Controller, the fluorescent display indicates the active source, input resolution/frame rate and aspect ratio/screen; for example:

3.8
Turning on the Power

```
                          Current

3.9
Primary Lens
Adjustments

The Q-750d Ultra gives you a great deal of control over the picture size, position and focus.

Focus and Zoom ➤   To focus the projected image, grasp the lens by the outer ring and rotate it.

To make the picture smaller (zoom out) or larger (zoom in), move the zoom tab in the appropriate direction.
Lens Shift ➤   To access the lens shift controls, loosen the Phillips screw at the bottom of the decorative bezel on the front of the projector (see below). Then, remove the bezel.

Vertical Lens Shift: To shift the projected image vertically, insert the provided hex wrench into the vertical lens shift adjuster at the top of the projector (directly above the lens). Then, turn the wrench as shown to shift the lens in the desired direction.

Horizontal Lens Shift: To shift the projected image horizontally, insert the provided hex wrench into the horizontal lens shift adjuster at the top of the projector. Then, turn the wrench as shown to shift the lens in the desired direction.
When you have finished adjusting the lens position, re-install the front bezel.

3.10
Adjusting the Picture
Orientation

By default, the Q-750d Ultra is configured for a "floor/front" installation, in which the projector is installed upright and in front of the screen. If it is installed behind the screen and/or mounted on a ceiling, you must change the picture orientation. To do this:

1. On the DHD Controller remote control or front panel, press **MENU**.

2. Select **Service** from the Main Menu and enter the Service Menu passcode.

   ⚠ *Note*   *You must enter a passcode to access the Service menu.*

3. Select **Display Device** from the Service Menu.

4. Select **Configure** from the Display Device menu, then select **Installation**.

5. Select **Orientation**, then choose Floor/Rear, Ceiling/Front or Ceiling/Rear, to match the installation method. Or, for front-projection installations, use the **Auto** setting to have the projector automatically determine the orientation (floor or ceiling) using an internal sensor.

Projector and/or screen placement — among other things — can cause geometric distortion in the projected image.

To correct this, the DHD Controller provides precise, nine-point control over the projected image geometry. Use these controls as (and ***only if***) needed to re-position the image corners, mid-points and center to eliminate "keystoning" (mis-aligned corners) or "pincushion" distortion (mid-points not aligned with corners). See Figure 3-22.

**3.11
Adjusting the Image
Geometry**

Horizontal Keystoning
Vertical Keystoning
Pincushion Distortion
Figure 3-22. Keystone and Pincushion Distortion

"Keystoning" usually occurs when the projector is tilted relative to the screen. "Pincushion" distortion can sometimes occur if the throw distance is very short and/or the projector is equipped with an anamorphic lens.

To correct keystoning or pincushion distortion:

1. On the DHD Controller remote control or front panel, press **MENU**.

2. Select **Calibration** from the Main Menu and enter the Calibration Menu passcode.

> ⚠ **Note**   *You must enter a passcode to access the Calibration menu.*

3. Select **Image Alignment** from the Calibration Menu.

4. Select **Corner Alignment** to correct a "keystoned" image by adjusting the image corner positions. Select **Midpoint Alignment** to correct pincushion distortion by adjusting the image edge mid-points. See Figure 3-23.
Notes:
1. Smaller "x" values move a point to the left; larger values move it to the right.
2. Smaller "y" values move a point up; larger values move it down.

Figure 3-23. Image Alignment Controls

If you are installing a Q-750d Ultra/CineWide or Q-750d Ultra/CineWide with AutoScope, proceed as follows to install and adjust the anamorphic lens.

**3.12
Installing and
Adjusting the
CineWide Anamorphic
Lens**

![Note] *Note*	***It is extremely important that the primary lens is properly adjusted before you install the anamorphic lens. Ensure that the image from the primary lens is perfectly centered on the screen.***

The Q-750d Ultra Anamorphic lens mount kit consists of everything shown in Figure 3-24. Some components shipped with your projector may differ slightly from what is shown in these instructions. If any items are missing or damaged, please contact your Runco dealer or Runco Customer Service at (800) 23-RUNCO.
Figure 3-24. Anamorphic Lens Mounting Assembly - Exploded View

Attach Lens Mounting Assembly to Lens Motor Carriage Plate or Fixed CineWide Base Plate:

1. Remove the two Yaw/X Adjustment Levers (item #8) from the bottom of the Anamorphic Lens Holder (item #5).

2. Place the Anamorphic Lens Holder on top of the AutoScope Carriage Plate or Fixed CineWide Base Plate (item #7). Position the bracket so that the long slot at the bottom of the lens holder is perpendicular to the corresponding slots on the plate.

3. Secure the Anamorphic Lens Holder to the plate using the Hex Bolts/Washers (item #6) and Yaw/X Adjustment Levers that you removed in Step 1.

4. Use the Lens Mounting Screws to attach the Lens Adapter Ring (item #1) to the Pitch Adjustment Yoke (item #2); see Figure 3-25. (Use the round, threaded holes on the yoke.)

5. Use the Height/Y Adjustment T-Screws/Washers (item #3), Pitch Adjustment T-Screws/Washers (item #4) and T-Nuts (item #9) to attach the Pitch Adjustment Yoke and Lens Adapter Ring to the Anamorphic Lens Holder. **The Yoke should be as close to the primary lens as possible.**

6. Attach the lens to the Lens Adapter Ring by threading it clockwise.
Figure 3-25. Attaching the Anamorphic Lens to the Lens Ring

Configure Lens Motor Trigger (Q-750d Ultra/CineWide with AutoScope only):

CineWide with AutoScope maintains constant image height independent of the aspect ratio, while using the full display resolution of the projector. It accomplishes this by moving the anamorphic lens in front of the primary lens when widescreen material is being viewed. When the viewer transitions back to 16:9 or 4:3 source material, the anamorphic lens moves out of the light path.

To configure the lens motor trigger on the DHD Controller for proper AutoScope operation:

1. Project a 2.35:1 aspect ratio test pattern or other image on the screen.

2. On the DHD Controller remote control or front panel, press **MENU**.

3. Select **Service** from the Main Menu and enter the Service Menu passcode.

2.35:1

> ⚠ **Note**   *You must enter a passcode to access the Service menu for the first time after turning on the system.*
4. Select **Triggers** from the Service menu.

5. Assign the trigger output to which the lens motor is connected to the Cinema and Virtual Cinema aspect ratios. This enables the lens motor to move the anamorphic lens into position (in front of the primary lens) when either aspect ratio is selected.

6. Select the Cinema aspect ratio to move the anamorphic lens into position, if it isn't already. To do this, press **CINEMA** on the DHD Controller remote control (Figure 2-5), or press ▲ or ▼ repeatedly with no menus visible on-screen.

Adjusting the Horizontal (X) Lens Position:

1. Project a white field on the screen.

2. Loosen the Yaw/X-Adjustment Levers underneath the lens.

3. Slowly move the anamorphic lens into place (from right to left or vice versa) so that there are no shadows on either side of the screen:

Too Far Left

Correct position

Too Far Right
4. When the horizontal position is properly set, tighten the Yaw/X-Adjustment Levers to secure the lens in place.

Adjusting the Height (Y): With the white field still on-screen, loosen the Height/Y Adjustment T-Screws on either side of the lens. Then, slowly move the anamorphic lens into place so that there are no shadows on the top or bottom of the screen:

Too Low

Correct position

Too High
When the height is properly set, tighten the Height Adjustment T-Screws to secure the lens in place.

Adjusting the Pitch (Angle): Next, angle the lens to even out any top-to-bottom pincushion distortion. To do this, loosen the Pitch Adjustment T-Screws (directly below the Height/Y Adjustment T-Screws) on either side of the lens to allow it to pivot freely. Then, adjust the anamorphic lens angle so that the projected image is rectangular:

Correct Lens Angle

Incorrect Lens Angle
The anamorphic lens will almost always be angled with respect to the projector; this is normal.

Once the proper lens angle has been set, firmly tighten the Pitch Adjustment T-Screws to secure the lens in place.

Note

There may be some pincushion distortion even after the lens is properly adjusted, especially at shorter throw distances. If this is the case, Runco recommends that you slightly over-scan the image into the screen frame area to mask the distortion.

Adjusting the Yaw: Loosen the Yaw/X-Adjustment Levers to allow the lens to pivot freely from side to side. Then, angle the lens to even out any left-right pincushion distortion:

Anamorphic Lens (Top View)

Correct Position

Wrong Position
Once the proper lens angle has been set, firmly tighten the Yaw/X-Adjustment Levers to secure the lens in place.

Geometry:

1. Input an anamorphic cross-hatch test pattern to the projector.

2. Unscrew the Anamorphic Lens just enough to allow it to rotate freely.

3. Grasp the lens by the center ring and rotate the lens until the image is properly anamorphic:

Wrong Position   Correct Position
4. When the image geometry appears correct, tighten the Anamorphic Lens Set Screw (item #10) to secure the lens in place. (When viewed from the front, the rear opening on the anamorphic lens should appear as a tall, narrow oval.)

Focus: Finally, rotate the Focus Ring on the anamorphic lens to fine-tune the optical focus.
To display the Main Menu, press the **MENU** button on the remote control (Figure 2-5) or DHD Controller front panel (Figure 2-3).

To select a menu item, use the ▲ and ▼ buttons on the remote control or DHD Controller front panel to highlight it. Then, to confirm your selection, press **ENTER** on the remote control or DHD Controller front panel.

The DHD Controller OSD menus are arranged hierarchically, as shown in Figure 4-1. Depending on the selected input source and signal characteristics, some menu options may not be available.

Figure 4-1. Q-750d Ultra OSD Menu Structure (continued)

The Main Menu is the starting point for accessing all DHD Controller functions.

(You must enter a passcode to access the Calibration and Service menus.)

◄ *Main Menu*

Runco Video
Input Source
Aspect Ratio
Screen
Picture
Input Position
Memory Presets
Sleep Timer
Information
Calibration
Service

From the Main Menu, select Input Source to choose a video signal source.

The active source is indicated by an arrow (➜) to its left; in this example, Composite is the active source.

◄ *Input Source*

Input Source	
➜	Composite 1
	Composite 2
	Composite 3
	Component
	HD 1
	HD 2
	SCART
	HDMI 1
	HDMI 2
	HDMI 3
	HDMI 4

To change the aspect ratio (size and shape) of the projected image, select Aspect Ratio from the Main Menu and press **ENTER**. Select the appropriate aspect ratio for your screen size and the type of program material being viewed; refer to Table 4-1.

The currently-selected aspect ratio is indicated by a "☒" to its left; in this example, 16:9 is selected.

Note that some aspect ratios are unavailable and/or not useful with certain types of source material. The optimal setting depends on a number of factors, such as:

• The aspect ratio of the source material, as broadcast or encoded on the playback medium.

• The "display type" (16:9 or 4:3) and output resolution settings at the source component. Most modern DVD/BD players and set-top boxes have such controls.

• Viewer preference (original aspect ratio with "black bars," or a full-screen presentation with some distortion or cropping).

◄ *Aspect Ratio*

Aspect Ratio	
☒	16:9
☐	4:3
☐	Letterbox
☐	VirtualWide
☐	Cinema
☐	Virtual Cinema
☐	Native

Note   *The aspect ratio selection is automatically saved for each input and resolution.*

Table 4-1. Aspect Ratio Settings
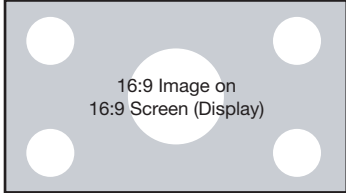

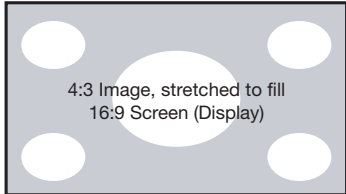

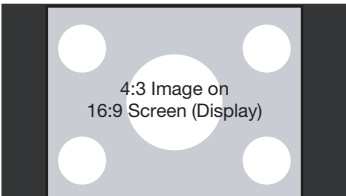

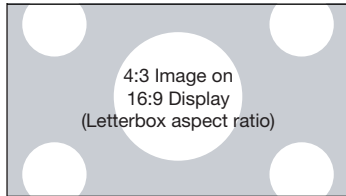

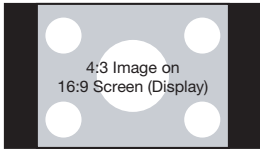

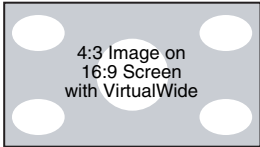

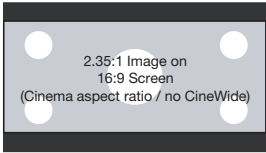

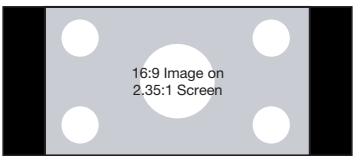

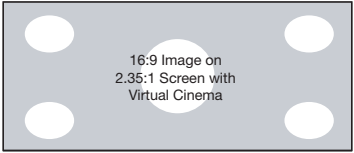

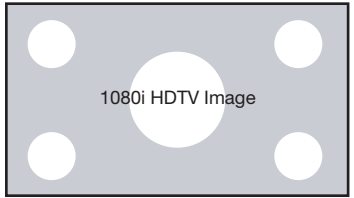

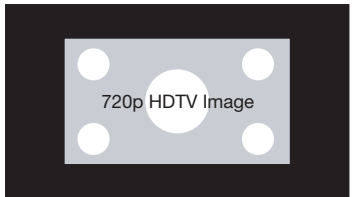

Aspect Ratio	Remote Control Key	Description	
16:9	16:9	16:9 Image on 16:9 Screen (Display)	Select 16:9 to view 16:9 DVDs and HDTV programs in their native aspect ratio.
		4:3 Image, stretched to fill 16:9 Screen (Display)	4:3 images are stretched horizontally to fit a 16:9 screen.
4:3	4:3	4:3 Image on 16:9 Screen (Display)	Standard 4:3 scales the input signal to fit in the center of the 16:9 screen. 4:3 is the aspect ratio used by computer monitors, standard television programming and most VHS video cassettes.
Letterbox	LET BOX	4:3 Image on 16:9 Display (Letterbox aspect ratio)	Letterbox mode scales (zooms in on) a 4:3 image linearly (by the same amount on all sides) to fill a 16:9 display. Letterbox is best suited for viewing LaserDisc movies or non-anamorphic DVDs on a 16:9 screen.
VirtualWide	V-WIDE	4:3 Image on 16:9 Screen (Display)	VirtualWide scales a 4:3 image NON-linearly (more on the sides than in the center) to fit a 16:9 screen.
		4:3 Image on 16:9 Screen with VirtualWide	
		4:3 Image on 2.35:1 Screen with VirtualWide	On a 2.35:1 screen, the image is centered between black bars on either side.

Table 4-1. Aspect Ratio Settings (continued)

Aspect Ratio	Remote Control Key	Description	
Cinema	CINEMA		Select Cinema to view 2.35 source material in its native aspect ratio.
		2.35:1 Image on 16:9 Screen (Cinema aspect ratio / no CineWide)	With a 16:9 screen and a standard Q-750d Ultra (without an anamorphic lens), the upper and lower portions of the screen are masked, but the geometry of the active image area is unchanged.
		2.35:1 Image on 2.35:1 Screen (Cinema aspect ratio / CineWide)	With a 2.35:1 screen and an anamorphic lens, the DHD Controller scales the 2.35:1 image so that the active image area fills the 16:9 chip surface, eliminating the black bars. The secondary, anamorphic lens then restores the proper geometry to the 2.35:1 image.
Virtual Cinema	V-CINE	16:9 Image on 2.35:1 Screen	A 16:9 image is scaled NON-linearly (more on the sides than in the center) to fit a 2.35:1 screen.
		16:9 Image on 2.35:1 Screen with Virtual Cinema	
Native	NATIVE	1080i HDTV Image	Select Native to display the source signal in its native resolution, centered in the display area with no re-sizing or overscan.
		720p HDTV Image	This means, for example, that 720p HDTV programs will display with unused pixels on all sides: 320 on the left and right sides and 180 above and below.

With SDTV and EDTV sources, the DHD Controller scales the image horizontally to achieve a 16:9 aspect ratio. |

Screen ➤

Screen
Screen 1
Screen 2

The Screen Menu allows you to recall multiple sets of stored values for certain controls (Output Shift and Image Alignment) that are saved for each aspect ratio. Such settings are also saved "per screen." To recall the Output Shift and Image Alignment settings associated with "Screen 1" or "Screen 2," make that selection here.

Picture ➤

Picture
Brightness
Contrast
Color
Tint
Sharpness
Noise Filter

Use the controls in the Picture Menu to calibrate each DHD Controller input to achieve optimum picture quality.

The DHD Controller has been designed to incorporate setup and calibration standards established by the Imaging Science Foundation (ISF). The ISF has developed carefully crafted, industry-recognized standards for optimal video performance and has implemented a training program for technicians and installers to use these standards to obtain optimal picture quality from Runco video display devices. Accordingly, Runco recommends that setup and calibration be performed by an ISF certified installation technician.

All signal types require separate processing. Therefore, you need to calibrate each DHD Controller input separately.

⚠ *Note*

*1. When you change a picture quality setting, save the change to a preset afterwards. Otherwise, the change will be lost when a different input is selected. (Picture quality settings are saved for each input separately.) For information about saving settings, refer to **Memory Presets** on page 64.*

*2. For best results, Runco recommends that you set ConstantContrast to Off before adjusting Brightness, Contrast and other image quality settings in this menu (refer to **ConstantContrast** on page 71). After you have completed the initial calibration, set ConstantContrast to On if desired.*

Although it may be possible to obtain satisfactory picture quality using the naked eye and regular program material, Runco recommends using an external test pattern source (Ovation Multimedia, Digital Video Essentials or AVIA test DVD or equivalent) for best results.

Connect your test pattern source to the input that you are calibrating and proceed as follows. **Perform the adjustments in the order listed here.**

Brightness: On your external test pattern source, select a PLUGE pattern. (PLUGE is an acronym for "Picture Line-Up Generation Equipment.") Figure 4-2 shows a typical PLUGE pattern.
Figure 4-2. Typical PLUGE Pattern for Adjusting Brightness

PLUGE patterns vary but generally consist of some combination of black, white and gray areas against a black background. The example above includes two vertical bars and four shaded boxes.

Select Brightness from the Picture menu and press **ENTER**. Adjust the brightness so that:

* The darkest black bars disappear into the background.
* The dark gray areas are barely visible.
* The lighter gray areas are clearly visible.
* The white areas are a comfortable level of true white.
* The image contains only black, gray and white (no color).

Contrast: On your external test pattern source, select a stepped, gray-bar pattern like the one shown in Figure 4-3.

Figure 4-3. Typical Gray Bar Pattern for Adjusting Contrast

Select Contrast and press **ENTER**. Adjust the contrast to a point just below which the white rectangle starts to increase in size.

> *Note* — *Brightness and contrast controls are interactive. A change to one may require a subtle change to the other in order to achieve the optimum setting.*

Color Saturation: On your external test pattern source, select a color bar pattern like the one shown in Figure 4-4.
Figure 4-4. Typical Color Bar Pattern for Adjusting Color Saturation and Tint

1. Press the **MENU** button on the remote control or DHD Controller front panel.

2. Select Service from the Main Menu and press **ENTER**.

3. Enter the Service menu passcode.

4. Select Display Device from the Service menu and press **ENTER**.

5. Press **ENTER** again to select Configure.

6. Select Diagnostics and press **ENTER**.

7. Select Blue from the Diagnostics menu, then press **ENTER** to display only the blue color channel.

8. Press **EXIT** (or **MENU**) repeatedly to return to the Main Menu.

9. Select Picture from the Main Menu and press **ENTER**.

10. Select Color from the Picture menu and press **ENTER**.

11. Adjust the color saturation level until the outermost (gray and blue) color bars appear to be a single shade of blue:
Tint: Tint or "hue" is essentially the ratio of red to green in the color portion of the image. When tint is decreased, the image appears redder; when it is increased the image appears greener.

To adjust the tint, enable "blue only" display mode in the Diagnostics menu, as you would for adjusting color saturation (refer to the previous section, ***Color Saturation***).

Select Tint from the Picture menu and press **ENTER**. Adjust the tint level until the cyan and magenta color bars (on either side of the green bar) appear to be a single shade of blue.

> **Note** *Like the brightness and contrast controls, the color and tint controls are interactive. A change to one may require a subtle change to the other in order to achieve the optimum setting.*

Sharpness: "Sharpness" is the amount of high-frequency detail in the image. To adjust sharpness, select Sharpness from the Picture menu and press **ENTER**. On your external test pattern source, select a pattern like the one shown in Figure 4-5. Adjust as needed, looking for white edges around the transitions from black to gray and differently-sized lines in the "sweep" patterns at the top and bottom. Lower the sharpness setting to eliminate them.
Figure 4-5. Typical Test Pattern for Adjusting Sharpness

Noise Filter: To apply noise filtering to the input signal, select Noise Filter from the Picture menu. The Noise Filter is useful for clearing up noisy images from 480i video sources.

Use the left- or right-arrow buttons to select the desired amount of noise reduction, keeping in mind that higher settings (which reduce high frequencies) may also "soften" the image.

Input Position ➤ Use the controls in the Input Position Menu to fine-tune the aspect ratio and image position for the current source.

Input Position
Left/Right
Up/Down
Width
Height
Overscan
Overscan Mode
Phase
Tracking

Note *The input position settings are automatically saved for each input and resolution.*

Left/Right: Select Left/Right from the Input Position menu to shift the projected image horizontally. Press ▶ to shift the image to the right; press ◀ to shift it to the left.

Up/Down: Select Up/Down from the Input Position menu to shift the projected image vertically. Press ▶ to shift the image upward; press ◀ to shift it downward.

Width: Select Width from the Input Position menu to change the projected image width. Press ▶ to increase the width; press ◀ to decrease it.

Height: Select Height from the Input Position menu to change the projected image height. Press ▶ to increase the height; press ◀ to decrease it.

Overscan/Overscan Mode: Overscan pushes the outside edge of the active picture area of the video signal out beyond the edge of the display area.

Some television programs are produced based on the assumption that older television sets may not display the outer edges of the broadcast picture area. Overscan effectively trims away these inactive, outer edges and enlarges the remaining portion of the image to fill the display area.

For HDTV, DVDs and other video sources, Overscan is generally not necessary or desirable.

This control defines the amount of overscan applied to the image. The range is from 0 to 20. There are two overscan modes:

- In **Crop** mode, each increment adds a mask at the top, bottom, left and right edges of the source image equal to 0.5% of the displayed horizontal resolution (1% total). A setting of 10, for example, crops the image 5% on all sides or 10% total.

- In **Zoom** mode, each increment adds a factor to the scaling of the source image so that the vertical and horizontal resolutions are 100% plus 1% increments of the size determined by the aspect ratio function. A setting of 10, for example, zooms in on the image 5% on all sides or 10% total.

Figure 4-6 illustrates the effect of each overscan mode setting.
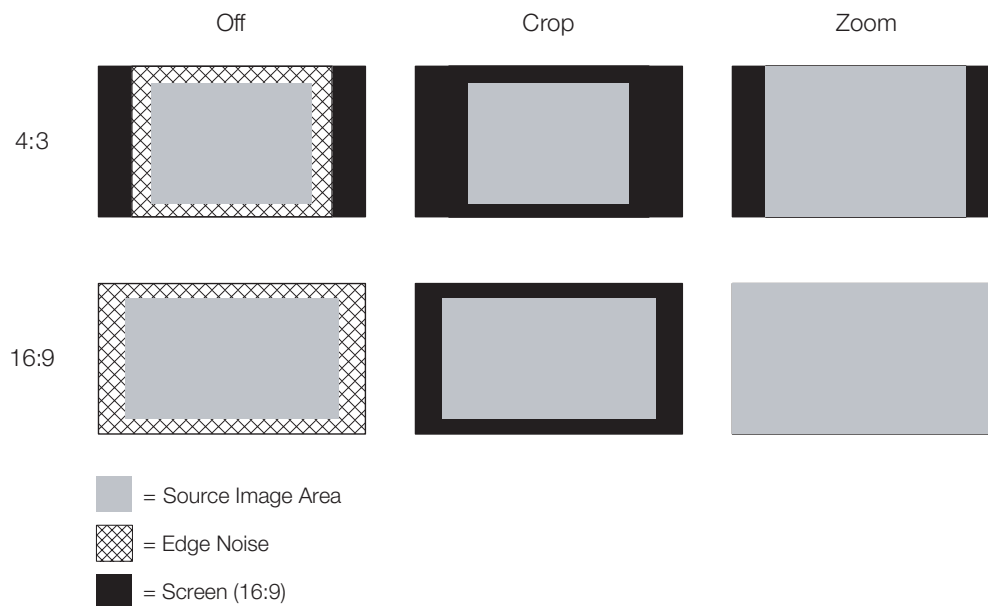

Figure 4-6. Overscan Modes

Phase (RGB, Component or SCART sources): This control adjusts the phase of the pixel sampling clock relative to the incoming signal. Adjust the phase when an RGB, Component or SCART image still shows shimmer or "noise" after Tracking has been optimized.

> *Tip*   *Adjust the Phase after adjusting Tracking (see below).*

For best results, use a good test pattern such as a smooth gray consisting of a clear pattern of black and white pixels, or a similar "half on, half off" graphic image. Adjust the slidebar until the image stabilizes and each pixel is clearly defined. You may notice that you can stabilize the image at more than one point. Use either setting in such cases.

Tracking (RGB, Component or SCART sources): Tracking determines the frequency of the pixel sampling clock, indicated by the number of incoming pixels per line, so that all pixels generated by a particular source are sampled.

Steady flickering or several soft vertical stripes or bands across the entire image indicates poor pixel tracking. Proper pixel tracking helps ensure that the image quality is consistent across the screen, that aspect ratio is maintained and that pixel phase (see above) can be optimized.

Memory Presets ➤

Memory Presets		
➜ ISF Night		
ISF Day		
Custom 1	Save	Reset
Custom 2	Save	Reset

For each input, the DHD Controller lets you save image quality settings as presets that you can recall at a later time. You can create up to four presets per input and display mode (resolution and frame rate).

The DHD Controller stores the following display modes in each memory preset:

- 480i
- 480p
- 576i
- 576p
- 720p/24 Hz
- 720p/25 Hz
- 720p/30 Hz
- 720p/50 Hz
- 720p/60 Hz
- 1080i/50 Hz
- 1080i/50 Hz (Australia)
- 1080i/60 Hz
- 1080p/24 Hz
- 1080p/25 Hz
- 1080p/30 Hz
- 1080p/50 Hz
- 1080p/60 Hz

Use the Memory Presets menu to recall saved image presets, or to save image settings in the "Custom 1" or "Custom 2" memory location. The currently-selected preset is indicated by a "➜" to its left; in the example shown here, ISF Night is selected.

You should save changes to any of the following settings to a preset; otherwise they will be lost when a new input source or resolution is selected:

- Brightness
- Contrast
- Color saturation
- Tint
- Sharpness
- Gamma
- Color temperature and white balance

To select a memory preset, press ▲ or ▼ to highlight it and press **ENTER**.

To save the settings for the current input and display mode to the Custom 1 or Custom 2 memory preset, select it, press ◄ or ► to highlight Save and press **ENTER**.

![Note icon] **Note**   *To save the settings for the current input and display mode to the ISF Night or ISF Day memory preset, select Save ISF Night or Save ISF Day from the Calibration menu (refer to **Save ISF Night/Save ISF Day** on page 71).*

To reset the Custom 1 or Custom 2 memory preset to its factory-default state, select it, press ◄ or ► to highlight Reset and press **ENTER**.

Select Sleep Timer from the Main Menu to turn off the Q-750d Ultra after a specified interval. Press ▲ or ▼ to select Off, 30 Minutes, 60 Minutes, 90 Minutes, 2 Hours or 4 Hours. Then, press **ENTER.**

◄ **Sleep Timer**

Manufacturing

Signal / System: Select Information from the Main Menu, then choose either Signal or System to display information about the current input signal (resolution, frequency, type et cetera) and installed firmware versions, as well as other information that uniquely identifies your DHD Controller and display device.

Should you ever need to contact Runco Technical Support, this information will help them answer your questions or resolve product performance issues.

Signal	
Input Source	HDMI 1
Signal Format	1080p/60
Input Resolution	1920x1080
Vertical Freq	59.94 Hz
Horizontal Freq	67.500 kHz
Pixel Clock	148.500 MHz
Color Space	REC709
Sync Type	Separate
Memory Preset	ISF Night

System	
Model	DHD4
Display Name	Q-750d Ultra
Output Resolution	1920x1080
Serial Number	00000000
Boot Version	4.0
Firmware Version	4.0
Micro Version	4.0

Network	
MAC Address	1A:2B:3C:4D:5E:6F
IP Address	192.168.0.150
Subnet Mask	255.255.0.0
Default Gateway	192.168.1.1
DHCP	Enabled
Network Status	Connected

Network: Select Information from the Main Menu, then choose Network to display information about the Ethernet network connection.

To enable network communication via Ethernet, refer to ***IP Configuration*** on page 76.

Field Service / Manufacturing: The Field Service and Manufacturing menus are password-protected and intended for use only by Runco service personnel and factory technicians.

Use the Calibration menu to perform advanced picture quality adjustments. **This menu should be used by ISF-certified technicians only.**

> **Note** *You must enter a passcode to access the Calibration menu.*

To recall the ISF Night or ISF Day settings, select "ISF Night" or "ISF Day" from the Memory Presets menu (see page 64) or use the corresponding remote control buttons.

Display Color - Common Settings: Use the Display Color - Common Settings settings to adjust the color balance at the DHD Controller output. These settings are saved independently for each input and display mode.

- **Gain:** Use the Gain controls to correct color imbalances in the bright areas of the image. A good way to do this is to use a test pattern consisting mostly of solid white areas, such as an 80 IRE "window" pattern. If the white areas contain traces of red (Pr), green (Y) or blue (Pr), decrease the Gain for that color.

- **Offset:** Use the Offset controls to correct color imbalances in the dark areas of the image. A good way to do this is to use a test pattern consisting mostly of dark gray areas, such as a 30 IRE "window" pattern. If the gray areas contain traces of red (Pr), green (Y) or blue (Pr), decrease the Offset for that color.

- **Gamma:** Select Gamma from the Display Color - Common Settings menu to choose a de-gamma curve. Used correctly, the Gamma control can improve contrast while maintaining good details for blacks and whites. If excess ambient light washes out the image and it becomes difficult or impossible to see details in dark areas, lower the gamma setting to compensate. This improves contrast while maintaining good details for blacks. Conversely, if the image is washed out and unnatural, with excessive detail in black areas, increase the setting.

  - **Mode:** With the Q-750d Ultra, two Gamma adjustment modes are available: Simple or Advanced. The two modes are mutually exclusive; when you select the Simple mode, the Advanced selection in the Gamma menu is grayed out. Likewise, when you select Advanced, the Simple selection is grayed out.

  - **Simple:** Use the Simple Gamma control to perform gamma correction at the display according to a simple power law gamma function. The value chosen here corresponds to the power variable in this equation:

    $$Output = Input^{Power}$$

    The DHD Controller applies this gamma curve to all three primary color channels (red, green and blue).

  - **Advanced:** To select a custom gamma curve, select Mode from the Gamma menu and set it to Advanced. Then, select Advanced from the Gamma menu to select one of up to 20 pre-programmed gamma tables. Custom gamma tables provide the ability to perform complex, non-linear gamma correction on each primary color channel independently of the others.

- **Color Temp:** Select Color Temp from the Display Color - Common Settings menu to adjust the color temperature. Color temperature establishes the "color of gray" by adjusting the 75% white point to various color points.

  What are "color points?" A "color point" is an x/y coordinate pair that defines a color's location on the standard CIE chromaticity graph, shown in Figure 4-7. (CIE stands for "Commission Internationale de l'Éclairage" (International Commission on Illumination), the organization responsible for color measurement and management standards.)
Figure 4-7. CIE 1931 Chromaticity Diagram

- **Simple:** Select Simple mode from the Color Temp menu (with the Q-750d Ultra, this is the only choice) to choose one of four color temperature presets: 5500K, 6500K, 7500K and 9300K. The default setting, 6500K, is appropriate for most situations. Higher settings produce a "bluer" picture; lower ones impart a reddish hue to the image.

  Table 4-2 lists the x- and y-coordinates for each color temperature preset.

Table 4-2. Color Temperature Presets and Associated Color Points

Color Temperature Preset	Associated x/y Values	
	x	y
5500K	0.332	0.348
6500K	0.313	0.329
7500K	0.299	0.315
9300K	0.284	0.298

- **Color Gamut:** Select Color Gamut from the Display Color - Common Settings menu to select a color gamut (range) that may be different from the default color gamut.

  Each setting defines the precise hue of each primary (red, green and blue) and secondary (yellow, cyan and magenta) color component used to generate the millions of colors produced in displays. Changing this setting relocates the "triangle" for possible colors (see Figure 4-7). For example, changing the x/y coordinates for red moves the color closer to either orange or violet, which in turn affects all displayed colors having a red component.

  > **Note** *The DHD Controller uses the Color Gamut settings for all display modes on a given input.*

- **Auto** automatically chooses the appropriate color gamut:
  - **SMPTE C** for NTSC, 480i and 480p sources.
  - **EBU** for PAL, SECAM, 576i and 576p sources.
  - **REC709** for all other sources.
- Select **REC709** to use the color gamut defined in ITU-R BT.709-5.
- Select **SMPTE-C** to use the color gamut defined in SMPTE 170M-1999.
- Select **EBU** to use the color gamut defined in EBU Tech. 3213-E.
- Select **Native** for Runco's recommended Personal Color Equalizer preset for typical video sources. It displays the fully saturated LED color gamut with appropriate color brightness, hue, and Runco Smart Color settings.
- Select **DCI** to use the color gamut defined in Digital Cinema System Specification Version 1.2.
- Select **PCE** to use the Personal Color Equalizer feature of the Q-750d Ultra. PCE lets you define a custom color gamut. Refer to the next section, *PCE*, for instructions on how to do this.

Table 4-3 lists the Color Gamut settings and associated x- and y-coordinates for each primary and secondary color component.

Table 4-3. x/y Color Gamut Values

| Color Component | Color Gamut Settings and Associated x/y Values | | | | | | | |
| | REC709 | | SMPTE "C" | | EBU | | DCI | |
	x	y	x	y	x	y	x	y
Red	0.640	0.330	0.635	0.340	0.640	0.330	0.680	0.320
Yellow	0.419	0.505	0.421	0.506	0.418	0.502	0.425	0.548
Green	0.300	0.600	0.305	0.595	0.290	0.600	0.265	0.690
Cyan	0.225	0.329	0.228	0.326	0.220	0.329	0.205	0.360
Blue	0.150	0.060	0.155	0.070	0.150	0.060	0.150	0.060
Magenta	0.321	0.154	0.318	0.162	0.328	0.158	0.342	0.154

• **PCE:** To use the Personal Color Equalizer to define a custom color gamut, choose the "PCE" Color Gamut setting (refer to **Color Gamut** on page 69). Then, choose PCE from the Display Color - Common Settings menu and press **ENTER**.

> ⚠ *Note*   *The DHD Controller uses the PCE settings for all display modes on a given input.*

• **Hue/Saturation/Level:** PCE provides the ability to define a custom color gamut in terms of primary (red, green and blue) and secondary (yellow, cyan and magenta) color hues, saturation and level (brightness).

  Each control operates only on the color specified. Surrounding colors are linearly interpolated based on their distance from each of these colors. In the CIE 1931 Yxy coordinate system (see Figure 4-8), Hue rotates the color coordinates around the white point, Saturation adjusts the coordinate's distance from white and Level adjusts the luminance (Y) of the color relative to white.
Figure 4-8. Effect of PCE Hue and Saturation Controls

• **RSC™ (Runco Smart Color):** Set RSC to On to to improve the accuracy of flesh tones and increase color saturation, without sacrificing the purity of other colors.

- **White Balance:** To precisely adjust the white point associated with the custom color gamut, choose White Balance from the PCE sub-menu. These controls operate identically to the Gain controls in the Display Color - Common Settings menu (described on page 67).

Display Color - Projector Settings: These settings are also saved independently for each input and display mode.

- **SatCo (BrilliantColor™):** Select SatCo (BrilliantColor™) from the Display Color - Projector Settings menu to enable (On) or disable (Off) BrilliantColor processing, which improves brightness in grays and secondary colors.

- **ConstantContrast:** Select ConstantContrast from the Display Color - Common Settings menu to enable (**Low/Medium/High**) or disable (**Off**) ConstantContrast in the optical engine. ConstantContrast uses a dynamic LED driver that modulates light to the DMD based on the actual content of the video material. Runco recommends that you disable ConstantContrast before adjusting Brightness, Contrast or other image settings.

Input Image: The Input Image controls are functionally similar to those in the Picture menu (refer to page 58), but are accessible only by entering the Calibration menu passcode.

Note	*The Input Image settings establish the "zero point" for the Picture menu settings, whose values represent offsets from the Input Image settings. For example, if you set Brightness to 10 in this menu, setting Brightness to 10 in the Picture menu results in an actual setting value of 20 (10+10).*

Input Color: The Input Color controls are similar to those in the Display Color menu (see above), but adjust the color balance of the incoming signal. These settings are also saved independently for each input and display mode.

- **Gain/Offset (HD1, HD2 and Component/SCART inputs only):** These controls operate similarly to those in the *Display Color - Common Settings* menu (described on page 67), but affect the Y, Pb and Pr signal components rather than the red, green and blue channels.

- **Chroma Delay:** use the Chroma Delay control to correct a mis-aligned image from a composite video source. Chroma delay in an image causes color shifts to occur to the left of the vertical edge transitions, producing artificial shadows or a "halo" effect. If necessary, adjust this setting to eliminate them.

- **Noise Filter:** To apply noise filtering to the input signal, select Noise Filter from the Input Color menu. The Noise Filter is useful for clearing up noisy images from 480i video sources.

  Use the left- or right-arrow buttons to select the desired amount of noise reduction, keeping in mind that higher settings (which reduce high frequencies) may also "soften" the image.

Save ISF Night/Save ISF Day: Whenever you make a change to the ISF settings, you should always save it. Select Save ISF Night or Save ISF Day from the Calibration menu to do this.

Copy/Paste
Memory Preset
Aspect Ratio

Memory Preset	
Copy Settings	
Paste Settings	
Copied From:	
Input Source	HDMI 1
Signal Format	1080p/60
Memory Preset	ISF Night

Copy/Paste - Memory Preset: You can copy and paste settings from one memory preset to another. This gives you a convenient starting point for creating a new preset based on an existing one, to make the calibration process less time-consuming.

For example, you can use the Copy/Paste Memory Preset feature to:

• Apply settings from HDMI 1 to HDMI 2, or from HD1 to HD2.

• Calibrate an input for 720p source signals, then use those settings for 1080i sources.

• Duplicate ISF Night settings for a given source and signal format and save them in the Custom 1 memory preset.

To use this feature, select Copy/Paste from the Calibration menu, then select Memory Preset.

• **Memory Preset - Copy Settings:** Select Copy Settings from the Copy/Paste Memory Preset menu to place the settings for the current input source, signal format (resolution and frame rate) and memory preset onto a "clipboard," which is a temporary memory location. When you do, the message "Settings Copied" briefly appears on-screen. The Copy/Paste menu then re-appears, indicating the source of the copied settings.

> **Note** — *Copied settings are not retained after a power cycle.*

• **Memory Preset - Paste Settings:** To apply the settings on the clipboard to a different input source, signal format and/or memory preset, do **any or all** of the following:

  • Switch to another input (for example, from HD1 to HD2).

  • Change the output signal format at the source (for example, from 720p/60 to 1080i/60).

  • Switch to another Memory Preset (for example, from ISF Night to Custom 1).

  Then, select Paste Settings from the Copy/Paste Memory Preset menu. ***If you want to keep these new settings, you must save them!*** (Refer to ***Save ISF Night/Save ISF Day*** on page 71 or ***Memory Presets*** on page 64.)

Copy/Paste
Memory Preset
Aspect Ratio

Aspect Ratio	
Copy Settings	
Paste Settings	
Copied From:	
Aspect Ratio	16:9
Screen	Screen 1

Copy/Paste - Aspect Ratio: You can also copy and paste certain settings, such as those for Output Shift and Image Alignment (refer to page 73) from one aspect ratio or "screen" (refer to ***Screen*** on page 58) to another.

To do this, select Copy/Paste from the Calibration menu, then select Aspect Ratio.

• **Aspect Ratio - Copy Settings:** Select Copy Settings from the Copy/Paste Aspect Ratio menu to place the Output Shift and Image Alignment settings for the current aspect ratio onto a "clipboard," which is a temporary memory location. When you do, the message "Settings Copied" briefly appears on-screen. The Copy/Paste menu then re-appears, indicating the source of the copied settings.

> **Note** — *Copied settings are not retained after a power cycle.*

- **Aspect Ratio - Paste Settings:** To apply the Output Shift and Image Alignment settings on the clipboard to a different aspect ratio and/or screen, do **either** of the following:

  - Switch to another aspect ratio (for example, from 16:9 to Cinema).

  - Switch from Screen 1 to Screen 2 or vice versa.

  Then, select Paste Settings from the Copy/Paste Aspect Ratio menu. The new settings are saved automatically.

Output Shift: The Left/Right, Up/Down, Width and Height controls in the Output Shift menu are similar to those in the Input Position menu, except that they change the characteristics of the output signal. These settings are saved independently **for each aspect ratio and screen selection** (refer to *Screen* on page 58).

- **Screen Masking:** .This control adjusts the amount of cropping on each edge of the output image. This differs from the regular Overscan control in two ways:

  - It allows separate adjustments on each edge; and

  - It is saved per aspect ratio, per screen (as opposed to per connector, per mode).

This is useful for installations where the aspect ratio of the screen doesn't exactly match the aspect ratio of the display.

Image Alignment: Use the controls in the Image Alignment menu to ensure proper image geometry; that is, a perfectly rectangular projected image with no keystoning or pincushion. For detailed instructions, refer to *Adjusting the Image Geometry* on page 45.

Splash Configure: Use the Splash Configure menu to control the appearance and behavior of the "splash" screen that appears on the display upon power-up.

- **Owner Name/ISF Calibrated/ISF Other:** You can have the Q-750d Ultra display the owner's name, your name, the phrase "ISF Calibrated" and/or any other string, up to 30 characters in length.

  Use the up or down cursor button to select a character. Use the right and left cursor buttons to change the cursor position. Press **MENU** when you have finished entering text.

- **Splash Timer:** When you turn on the Q-750d Ultra, it projects a welcome screen with the Runco and ISF logos, along with the personalized information you enter as described above. Select Splash Timer from the Splash Configure menu to set the amount of time for which this screen appears. The range is from 5 to 60 seconds, in one-second increments. Press ◀ or ▶ to set the timer, then press **MENU**.

- **Splash Enable:** When you have finished customizing the splash screen, select Splash Enable from the Splash Configure menu. Then, select On and press **ENTER**.

OSD Position: To adjust the position of the OSD, select OSD Position from the Calibration menu and press **ENTER**.

Press ▲ or ▼ to select "Hor." or "Ver." Then, press ◀ or ▶ to change the position.

Service ➤ Use the Service menu to access advanced projector configuration settings. **This menu should be used by ISF-certified technicians only.**

Service
Test Video
Input Names
Display Device
Network
Color Space
Triggers
Miscellaneous
Sync Threshold
HDMI
Front Panel Brightness
Auto Power Off
Standby Mode
System Reset
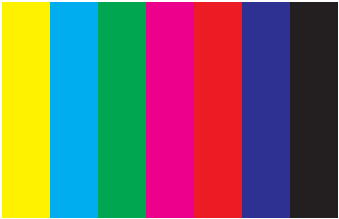

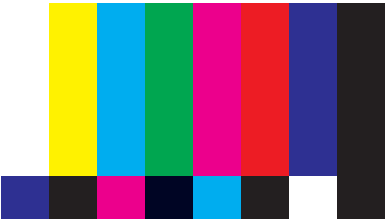

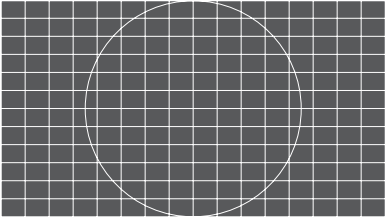

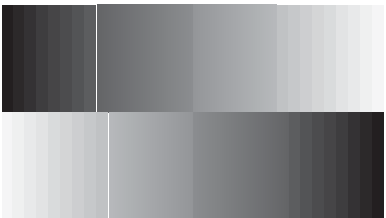

Note *You must enter a passcode to access the Service menu.*

Test Video: Select Test Video from the Service Menu to access the internal test patterns on the DHD Controller. Table 4-4 lists the available test patterns and describes their suggested usage.

Table 4-4. Test Patterns and Their Suggested Usage

Pattern		Suggested Usage
Color Bars 1		Use this pattern when making color saturation and tint adjustments.
Color Bars 2		Use this pattern when making color saturation and tint adjustments.
Focus		Use this pattern when adjusting the focus.
Grey Bars		Use this pattern when making brightness, contrast or white balance (gain/offset) adjustments.

Press **MENU** to exit test pattern mode.

Input Names: You can give each DHD Controller input a descriptive name. For example, you may want to change the default input name to the type of source component connected to it: "VCR," "DVD," "Laptop" et cetera. Input names can be up to 12 characters long.

To edit an input name, select Input Names from the Service menu. Press ▲ or ▼ to select an input and press **ENTER**. Use the ▲ or ▼ buttons to change a character; press ◄ or ► to select a character to change. When you have finished editing the input name, press **ENTER** or **MENU**.

To restore the default input name, press ▼ repeatedly to highlight that input name in the "Restore" column. Then, press **ENTER**.

Input Names	
	Restore
Composite 1	Composite 1
Composite 2	Composite 2
Composite 3	Composite 3
Component	Component
HD 1	HD 1
HD 2	HD 2
SCART	SCART
HDMI 1	HDMI 1
HDMI 2	HDMI 2
HDMI 3	HDMI 3
HDMI 4	HDMI 4

Display Device - Configure: The options in the Display Device - Configure menu allow you to change the picture orientation or access other, display-device specific functions.

- **Installation – Orientation:** Select Installation from the Display Device - Configure menu, then select Orientation to change the picture orientation to suit the method of installation (Floor Front, Floor Rear, Ceiling Front or Ceiling Rear). Or, for front-projection installations, use the **Auto** setting to have the projector automatically determine the orientation (floor or ceiling) using an internal sensor.

- **Display Info.:** Select Display Info. from the Display Device - Configure menu to see the projector serial number.

- **Diagnostics:** Select Diagnostics from the Display Device - Configure menu, then select Red, Green, Blue, Yellow, Cyan or Magenta to display only that color channel (simulating a filter of that color). This can be useful for calibration or measurement purposes.

  To restore the normal picture (all colors), select White.

- **Altitude:** Select Altitude from the Display Device - Configure menu to control the operation of the projector's cooling fan.

  In most cases, the default setting (**Auto**) will maintain the correct operating temperature. If the projector frequently turns off due to overheating, or in certain high-altitude operating environments, you may need to change this setting to **High**.

Network: The options in the Network menu allow you to configure the network communication features.

• **IP Configuration:** Select IP Configuration from the Network menu to either set the IP address, subnet mask and default gateway of the DHD Controller manually or obtain these settings automatically, from a DHCP (Dynamic Host Configuration Protocol) server. (Most broadband routers and gateways support DHCP.) You can also test the network connection from this menu.

   • **DHCP:** To enable the DHCP client in the DHD Controller, select DHCP from the IP Configuration menu and set it to **On**. With this setting, the DHD Controller's IP address, subnet mask and default gateway are assigned by the local DHCP server.

   To manually configure these values, set DHCP to **Off**.

   > ⚠ *Note* *The IP Address, Subnet Mask and Default Gateway items in the IP Configuration menu are disabled (grayed out) when DHCP is enabled.*

   • **IP Address:** Select IP Address from the IP Configuration menu to manually configure the IP Address of the DHD Controller, as follows:

      1. Press ▲ or ▼ to select the first, second, third or fourth byte of the address.

      2. Press ▶ or ◀ to set the value of that byte. The range is from 0 to 255 inclusive.

      3. Repeat Steps 1 and 2 for all four bytes of the address.

      4. Press **MENU** when you have finished setting the address.

   • **Subnet Mask:** Select Subnet Mask from the IP Configuration menu to manually configure the IP subnet mask. The procedure is similar to that for setting the IP address.

   • **Default Gateway:** Select Default Gateway from the IP Configuration menu to manually configure the default IP gateway. The procedure is similar to that for setting the IP address.

   • **Communication Test:** Select Communication Test from the IP Configuration menu to verify proper operation of the network communication link.

   To start the test, select Start Test from the Communication Test menu. The DHD Controller displays the message "Performing Communication Test." When the test completes, the DHD Controller displays either "Failed" (along with the error that occurred) or "Succeeded."

• **Auto Firmware Upgrade:** Select Auto Firmware Upgrade from the Network menu to enable automatic detection of a newer version of the DHD Controller firmware. If one is found, you can configure the DHD Controller to install it automatically. These features make it easier to keep your DHD Controller firmware up-to-date.

   • **Auto Check For New Firmware:** To have the DHD Controller automatically check for firmware updates at periodic intervals, select Auto Check for New Firmware from the Auto Firmware Upgrade menu and set it to **On**. If you prefer to do this manually, set it to **Off** and use the Check For New Firmware sub-menu (described below).

   • **Auto Perform Upgrade:** If the "Auto Check For New Firmware" process determines that a newer firmware version than the one currently installed is available, you can have the DHD Controller automatically download and install it. To do this, select Auto Perform Upgrade from the Auto Firmware Upgrade menu and set it to **On**. The upgrade will occur the next time the DHD Controller is "power-cycled" (powered off, then on again).

If you prefer to do this manually, set it to **Off.** The DHD Controller will ask if you want to perform the upgrade the next time it is power-cycled.

- **Check For New Firmware:** To have the DHD Controller check for new firmware on demand (and perform an upgrade if it finds a new version), select Check For New Firmware from the Auto Firmware Upgrade menu. If the DHD Controller finds a new firmware version, select **Yes** to perform the upgrade or **No** to return to the previous menu.

- **E-Mail Notification:** Select E-Mail Notification from the Network menu to specify when and to whom the DHD Controller sends error and service notification messages via e-mail.

The notification messages are in the following format:

```
To:  [E-Mail Address; see below]
From:  do-not-reply@runco.com
Subject:  [Type of notification] from Runco DHD4
Body:

This is an automated message sent from the Runco DHD4:

Notification:          [One of the following:
                       "DHD Error" / "Display Error"
                       "Periodic Service Notification"
                       "Lamp Life Notification" / "Calibration Data"]

Detailed Description: [ If a DHD Error, one of the following:
                       "Fan Failure 1" / "Fan Failure 2"
                       "Overtemp 1" / "Overtemp 2"
                       "Initialization Failure"

                       If a Display Error, a device-specific
                       error message such as "Lamp Door Open"

                       If a Periodic Service Notification, the elapsed
                       time since the last notification

                       If a Lamp Life Notification, the number of hours
                       the lamp has been in service

                       If a Calibration Data message,
                       "See Attached File" ]
Serial Number:         [DHD Controller serial number]
Customer Information: [From "Customer Information" sub-menu;
                       see below]

Best Regards,

Runco International, LLC
1195 NW Compton Drive
Beaverton, OR 97006
1-800-237-8262
```

- **E-Mail Address:** To specify the destination e-mail address for error and service notifications, select E-Mail Address from the E-Mail Notification menu. The procedure is similar to that for setting the IP address (refer to *IP Configuration* on page 76). Enter up to 45 alphnumeric characters.

- **Error Notification:** To have the DHD Controller send a message to the destination e-mail address when a "DHD Error" or "Display Error" occurs, select Error Notification from the E-Mail Notification menu and set it to **On**.

- **Error Notification to Runco:** To have the DHD Controller send an e-mail message to Runco Customer Support when a "DHD Error" or "Display Error" occurs, select Error Notification to Runco from the E-Mail Notification menu and set it to **On**.

- **Periodic Service Notification:** You can have the the DHD Controller send periodic reminders via e-mail to perform regular maintenance tasks. To do this:

  1. Select Periodic Service Notification from the E-Mail Notification menu.

  2. Highlight **Enable** and press **ENTER**.

  3. Highlight **On** and press **ENTER**.

  4. Press **MENU**.

  5. Highlight **Timer** and press **ENTER**.

  6. Press ▶ or ◀ to set the notification interval in months. The range is from 1 to 255 inclusive; the default is 12 months.

  7. Press **MENU**.

- **Lamp Life Notification:** To have the DHD Controller send a message to the destination e-mail address when the lamp hour counter reaches a certain threshold, select Lamp Life Notification from the E-Mail Notification menu. Then:

  1. Highlight **Enable** and press **ENTER**.

  2. Highlight **On** and press **ENTER**.

  3. Press **MENU**.

  4. Highlight **Lamp Hours** and press **ENTER**.

  5. Press ▶ or ◀ to set the notification threshold in hours. The range is from 100 to 10,000 hours; the default is 1,000 hours.

  6. Press **MENU**.

- **Customer Information:** Select Customer Information from the E-Mail Notification menu to supply this information to the DHD Controller, which includes it in all e-mail notification messages. Six lines (up to 30 characters per line) of text are provided; use them however you wish.

  1. Press ▲ or ▼ repeatedly to select a line of text to edit.

  2. Press **ENTER**.

  3. Press ▲ or ▼ repeatedly to set the highlighted character.

  4. Press ▶ (or ◀) to select the next (or previous) character. Use the ▲ and ▼ buttons to change it.

  5. Press **ENTER** when you have finished editing that line of text.

  6. Repeat Steps 1 through 5 for each line of text you want to edit.

  7. Press **MENU** when you have finished entering customer information.

- **E-Mail Calibration Data:** To have the DHD Controller collect all calibration data, attach it to a message and send it to the destination e-mail address, select E-Mail Calibration Data from the E-Mail Notification menu. To confirm this action, select **Yes** and press **ENTER**.

  To cancel and return to the previous menu, select **No**.

• **Remote Network Control:** Select Remote Network Control from the Network menu to enable or disable control of the DHD Controller via an IP connection (typically using a web browser). Set it to **On** to allow all incoming remote network connectivity. Set it to **Off** to disable any incoming network communication that was not initiated by the DHD Controller.

> **Note** *This setting has no effect on the E-Mail Notification or Auto Firmware Upgrade functions.*

Color Space: Select Color Space from the Service menu to choose the color space of the source signal for HDMI, RGB, and component connections.

• The default setting, **Auto**, functions as follows:

  • **HDMI:** If the Auxiliary Video Information (AVI) infoframe contains color space and/or range data, the DHD Controller uses that information. Otherwise, for RGB sources, the DHD Controller uses the **RGB-Video** color space. For component SDTV and EDTV resolutions, **REC601** is used. For other component video resolutions, **REC709** is used.

  • **RGB:** If Hsync or Vsync signals are present, the DHD Controller uses the **RGB-PC** color space. Otherwise, **REC601** is used for SDTV and EDTV sources, and **REC709** for all other sources.

  • **Component:** For SDTV and EDTV resolutions, the DHD Controller uses the **REC601** color space. For all other resolutions, REC709 is used.

In most cases, the **Auto** setting determines the correct color space to use. If it does not, you can force the DHD Controller to use a specific color space. Choose one of the following:

• **REC709** sets the color space matrix to that defined in ITU-R BT.709.

• **REC601** sets the color space matrix to that defined in ITU-R BT.601.

• **RGB-PC** uses RGB color space and sets black at 0,0,0 RGB and white at 255,255,255 RGB, assuming an 8-bit image.

• **RGB-Video** uses RGB color space and sets black at 16,16,16 RGB and white at 235,235,235, assuming an 8-bit image, to correspond to the luminance values defined in digital component standards.

Triggers: Select Triggers from the Service menu to configure the 12-volt trigger outputs. You can assign one or more trigger outputs to each aspect ratio. Those triggers are then activated by selecting that aspect ratio.

If your Q-750d Ultra is equipped with an anamorphic lens, assign at least one trigger output (the same one to which the lens motor is connected) to the Cinema and Virtual Cinema aspect ratios.

Miscellaneous: Select Miscellaneous from the Service menu to set the following options:

• **Language:** Select Language from the Miscellaneous menu and press the up- or down-arrows to select the OSD Language (English, Français, Deutsch, Italiano, Español, Svenska, 简体中文 (Simplified Chinese), 繁體中文 (Traditional Chinese), Português, Русский (Russian), 日本語 (Japanese) or 한국어 (Korean)).

• **OSD Timer:** Select OSD Timer from the Miscellaneous menu to set the OSD Timer, which controls how long the menus remain on-screen after selecting them. Select from 5 to 60 seconds, in one-second increments. Or, set the timer to 0 (disabled) if you want the menus to remain on-screen indefinitely.

- **OSD Messages:** When you select a new aspect ratio, input source or memory preset, the DHD Controller briefly displays an on-screen message confirming your new selection. To prevent the display of these messages, select OSD Messages from the Miscellaneous menu to and set it to **Off**.

- **Blank Screen Color:** Select Blank Screen Color from the Miscellaneous menu to select the color that appears when no incoming signal is present. The range is from 0 to 255 inclusive for each color component (red, green and blue).

- **Sidebar Color:** Select Sidebar Color from the Miscellaneous menu to change the color of the inactive image area. The range is from 0 to 255 inclusive for each color component (red, green and blue). The inactive image area is on either side of the active image area when using the 4:3 aspect ratio.

- **Film Mode:** Use Film Mode to smooth out moving images from interlaced, standard-definition (SD) sources. In most cases, the DHD Controller detects the proper "pull-down" rate and vertical frequency. However, if your source is jittery and/or tearing you may want to enable Film Mode to ensure stable processing for that source.

- **CUE (Chroma Upsampling Error) Correction:** Some DVD players use MPEG decoders that do not correctly "upsample" the 4:2:0 format chroma information on the DVD to the 4:2:2 or 4:4:4 format required by the video encoder of the display device.

  This so-called "chroma bug" sometimes causes streaky or spiky horizontal lines running through the chroma channel. It is most noticeable in static, interlaced scenes and on diagonal edges (especially red ones). Set CUE to **On** to correct this issue.

- **Remote Code:** Select Remote Code from the Miscellaneous menu to set the infrared (IR) code set to which the DHD Controller will respond. By default, it is set to 17. You can change this setting if either:

  - Another device in the theater (a DVD player, for example) is responding to commands from the DHD Controller remote control (Figure 2-5) in ways that are unpredictable or undesirable.

  - You have multiple DHD Controllers and want to control them independently, as opposed to broadcasting commands from a single remote to all of them. In this scenario, you can use multiple remotes programmed to use different IR codes. Or, you can use a single remote and change the IR code as needed to address a specific DHD Controller.

  Tip   *Use the DHD Controller front-panel keypad to change the IR code to which the controller will respond. Then, change the code sent by the remote to match as described below.*

  When you change a remote code on the DHD Controller, you must re-program the DHD Controller remote control to send that same code. To do this:

  1. Press and hold the **LIGHT** button on the remote control for approximately three seconds, or until the LED on the remote lights solid red.

  2. Enter a new two-digit code between 00 and 31 inclusive. Include a leading zero for single-digit codes; for example, enter 9 as "09."

  3. The LED turns off to confirm the code change. If you enter an invalid code, the LED flashes for three or four seconds. Try again, entering a valid code.
Sync Threshold: Select Sync Threshold to adjust the threshold at which negative pulses on the component video green/luma channel are interpreted to be sync pulses.

Sync Threshold adjustment is occasionally necessary when a DVD player or HDTV source signal drops "below black" (for example, during scenes with explosions or when subtitles are present) and causes the projector to temporarily lose sync. If the sync level from the source is persistently too low, the display device won't sync with the source at all.

The range is from 0 (approximately 60 millivolts (mV)) to 15 (approximately 300 mV).

HDMI: Select HDMI from the Service menu to set the following options affecting communication between HDMI sources, the DHD Controller and the Q-750d Ultra.

- **HDMI EDID Extension:** Extended display identification data (EDID) is a data structureprovided by a display device to describe its capabilities to a graphics card. It is what enables a modern personal computer to know what kind of monitor is connected.

    Some modern display devices provide more information via EDID than others, in the form of "extensions." Some computer graphics cards do recognize or properly interpret this extended EDID information.

    Select HDMI EDID Extension from the HDMI menu to specify whether or not the EDID extensions from the display device are passed through to the sources connected to the HDMI 1, HDMI 2, HDMI 3 or HDMI 4 inputs. By default, the extensions are on. Change these settings only if HDMI EDID incompatibility issues arise.

- **Audio Format:** Select Audio Format from the HDMI menu to choose an option for routing the audio signal from an HDMI source. With the Q-750d Ultra, the recommended setting is **HDMI Out (Audio Only)**. (This is the default setting.)

- **CEC:** This control chooses whether or not the DHD Controller responds to HDMI CEC control messages from a disc player, set-top box or other HDMI source. It also enables or disables CEC communication between the DHD Controller and projector.

    The default (and recommended) setting is **On**. For more information about CEC, refer to ***Using HDMI CEC Messages*** on page 106.

    > ![Note] **Note**
    >
    > 1. Setting **CEC** to **Off** should be done only for troubleshooting purposes.
    >
    > 2. The DHD Controller does not transmit HDMI CEC control messages from the "HDMI Audio Out" connector.

- **HPD Toggle Rejection:** Select HPD Toggle Rejection from the HDMI menu to specify whether or not the DHD Controller ignores extraneous Hot Plug Detect (HPD) signal state changes from a downstream HDMI device (third-party display or audio/video receiver).

    The default setting, **Auto**, disables HPD toggle rejection on the Q-750d Ultra. Use the other settings to troubleshoot compatibility issues or reduce the amount of time needed to lock to an incoming signal.

Front Panel Brightness: Select Front Panel Brightness from the Service menu to adjust the brightness of the front-panel LED and LCD status indicators.
- **Logo LED:** Select Logo LED from the Front Panel Brightness menu to adjust the brightness of the large, illuminated logo on the left side of the display. The range is from 0 (off) to 31.

> **Note**
> *During a firmware upgrade, this LED lights at full brightness regardless of the Logo LED setting.*

- **Standby LED:** Select Standby LED from the Front Panel Brightness menu to change the behavior of the front-panel STANDBY indicator LED. When set to ON, the LED lights amber when the system is in standby mode; otherwise, it is off. When set to OFF, the LED is always off.

> **Note**
> *During a firmware upgrade, this LED lights at full brightness regardless of the Standby LED setting.*

- **LCD:** Select LCD from the Front Panel Brightness menu to adjust the brightness of the front-panel LCD. The range is from 0 (off) to 4.

Auto Power Off: Select Auto Power Off from the Service menu to have the Q-750d Ultra turn itself off after a period of inactivity (no source signal present).

- **Enable:** By default, Auto Power Off is disabled. To enable it, select Enable from the Auto Power Off sub-menu and set it to On.

- **Hours:** The default time-out period is eight (8) hours; the range is from 1 to 24 hours.

Standby Mode: Select Standby Mode from the Service menu to control the DHD Controller's power management feature.

• Choose **Low Power** (the default setting) to have the DHD Controller shut down completely when it is turned off. This conserves power but increases the amount of time required by the DHD Controller to start up when it is turned on.

• **Fast Startup** is a "quick-start" mode that keeps the DHD Controller running when it is turned off, even though it appears to be in standby mode. This results in much quicker startup times but consumes more power.

System Reset: To reset ALL controller settings (including image settings) back to their factory defaults, choose System Reset from the Service menu.

A confirmation message appears. Select Yes to continue with the reset or select No to cancel.

⚠ **Caution**	***This action is not undoable. Proceed with caution!*** *Before you perform a System Reset, save your "Custom" Memory Presets (page 64) and ISF Day/Night Memory Presets (page 71).*

Notes:

5. Maintenance and Troubleshooting

The Q-750d Ultra Series LED Home Theater Projector and DHD Controller does not require any routine maintenance. There are no user-serviceable or -replaceable parts. Unless you are a qualified, factory-trained Runco technician, **do not attempt to repair or replace any system component yourself.** You will void the product warranty if you do so.

◄ *Maintenance*

Table 5-1 provides some general guidelines for troubleshooting problems you may encounter with the Q-750d Ultra Series LED Home Theater Projector and DHD Controller. If the suggested solutions fail to resolve the problem or if you encounter an issue not described here, please contact your Runco dealer or Runco Technical Support.

◄ *Troubleshooting*

Table 5-1. Troubleshooting Chart

Symptom	Possible Cause(s)	Solution
The projector does not turn on.	• The projector is not plugged in or the AC outlet is not active. • The DHD Controller is not plugged in or the AC outlet is not active. • The remote control batteries have run out.	• Ensure that the projector is plugged in and that the AC outlet is active. • Ensure that the DHD Controller is plugged in and that the AC outlet is active. • Replace the batteries.
The display and DHD Controller both turn on, but there is no picture and on-screen menus do not appear.	• Faulty or incorrect video connection from the DHD Controller to the display.	• Ensure that the HDMI output from the DHD Controller is properly connected to the display (see Figure 3-10). • Try a known-good and/or shorter HDMI cable.
The display is on and menus appear, but there is no picture.	• Incorrect source selection. • Source component is not turned on. • Source component is connected incorrectly or not at all.	• Select the correct source. • Turn on the source component. • Check connections from the source component to the DHD Controller.
Image is too bright and/or lacks definition in the bright areas of the image.	• Contrast is set too high.	• Lower the contrast setting.
Image appears "washed out" and/or dark areas appear too bright.	• Brightness is set too high.	• Lower the brightness setting.
Colors in the image are swapped; for example, reds appear blue or vice versa.	• The Red/Pr, Green/Y or Blue/Pb outputs from the source are connected to the wrong inputs on the DHD Controller.	• Ensure that the source outputs are connected to the correct DHD Controller input.

Table 5-1. Troubleshooting Chart (continued)

Symptom	Possible Cause(s)	Solution
RGB-HD or Component HD images appear "noisy" or drop out intermittently.	• Tracking and Phase settings need adjustment. • The DHD Controller is having difficulty detecting sync pulses from the source.	• Adjust Tracking and Phase settings (refer to ***Input Position*** on page 62). • Adjust the Sync Threshold setting (refer to ***Sync Threshold*** on page 81).
Computer images do not display correctly.	• The resolution and frequency of the video card in the computer are not compatible with the Q-750d Ultra.	• Select a compatible resolution and vertical frequency (refer to ***Supported Timings*** on page 115).
Images from an HDMI source do not display.	• The resolution and frequency of the video card in the computer are not compatible with the Q-750d Ultra. • EDID compatibility issue. • HDMI cable from source to DHD Controller is either defective or too long.	• Select a compatible resolution and vertical frequency (refer to ***Supported Timings*** on page 115). • Set HDMI EDID Extension to "Off" (refer to ***HDMI EDID Extension*** on page 81). • Try a known-good and/or shorter HDMI cable.
Video from an HDMI source lags behind audio.	• Refer to ***Audio/Video Synchronization Issues*** on page 20.	• Use an external A/V receiver with audio delay capability to synchronize the audio signal with the video signal.
The image is too large or too small.	• Image size needs adjusting.	• Adjust the image size (refer to ***Input Position*** on page 62).
AutoScope lens motor doesn't work.	• The motor is not plugged in or the AC outlet is not active. • The motor is not connected to the trigger output on the DHD Controller. • Incorrect trigger assignment.	• Ensure that the motor is plugged in and that the AC outlet is active. • Check the trigger connection between the lens motor and DHD Controller (Figure 3-19). • Correct the trigger assignment (refer to ***Configure Lens Motor Trigger (Q-750d Ultra/CineWide with AutoScope only)*** on page 49).

6. External Control

In addition to using the DHD Controller front-panel keypad or remote control unit, there are three methods of controlling the Q-750d Ultra and DHD Controller externally:

- Using a serial (RS-232) link to send ASCII commands and receive responses to those commands.

- Using discrete infrared (IR) codes to program a third-party remote control unit.

- Using an HDMI connection to send Consumer Electronics Control (CEC) commands from a BD player or other source component that supports CEC.

The following sections describe these methods.

6.1 Serial Communications

The DHD Controller uses a simple text-based control protocol to take requests from control devices and to provide responses to such devices. This section describes how to send control messages over a serial link between the DHD Controller and an automation/control system or a PC running terminal emulation software.

> *Note*
>
> *The serial communication protocol described here replaces the serial protocol used by legacy Runco products (manufactured prior to September 2011) that include the DHD Controller.*
>
> *Runco recommends using this new protocol, as it is more concise and provides greater control than the old one. However, to maintain backward compatibility with existing automation/control system modules, the legacy Runco serial protocol is also supported.*

◄ RS-232 Connection and Port Configuration

To interface the Q-750d Ultra with an automation/control system or a PC running terminal emulation software, connect it to the **Display Control** output of the DHD Controller as shown in Figure 3-10 and Figure 3-11. Connect your control system or PC to the RS-232 input of the DHD Controller as shown in Figure 3-18.

Configure the RS-232 controller or PC serial port as follows: no parity, 8 data bits, 1 stop bit and no flow control. Set the baud rate to 19200, to match that of the DHD Controller RS-232 port.

◄ Command Format

Commands sent from an automation/control system or PC to the DHD Controller must have the following format:

`(www:xyz) [CR]`

Where:

- `(` and `)` indicate the start and end of the command data. If these characters are present, the DHD Controller assumes that valid command data is present in the command string. Otherwise, the DHD Controller ignores the command.

- `www` indicates the command code. This field is case insensitive; for example, `PWR`, `pwr` and `PwR` are all equivalent.

- `:x` is the destination parameter. This is an optional parameter that indicates which memory the command is referencing. This parameter is reserved for future use.

• `y` is the operand, which can have one of the following values:

    `?` = "Get" operand   `+` = "Increment" operand

    `=` = "Set" operand   `–` = "Decrement" operand

• `z` is the value to set for this parameter. It can have one of two formats:

    • **Integer value:** Any positive or negative number; for example, `100`.

    • **String value:** Any string surrounded by double quotes; for example, `"This is a string."`

• `[CR]` is the ASCII carriage return key (0x0D).

Response Format ➤   Responses sent from the follower to the initiator shall have the following format:

`(u;www:x=z) [CR]`

Where:

• `(` and `)` indicate the start and end of the command data. If these characters are present, the DHD Controller assumes that valid command data is present in the command string. Otherwise, the DHD Controller ignores the command.

• "u;" indicates the response code. This is only used by followers responding to a valid CLI command received. For any response code other than 0, the follower echoes back the command received rather than filling in the fields listed below.

    The response code can be one of the following:

    • 0 = Command successfully processed

    • 1 = Unknown command code

    • 2 = Invalid operator

    • 3 = Destination parameter not supported

    • 4 = Setting not available

    • 5 = Setting value not available

    • 6 = Setting value not supported

    • 7 = String too long

    • 8 = Command not supported in standby mode

    • 9 = Invalid parameter

    • 10 = Error processing command

    • 11 = Password not entered

• `www` indicates the command code. This field is case insensitive; for example, `PWR`, `pwr` and `PwR` are all equivalent.

• `:x` is the destination parameter. This is an optional parameter that indicates which memory the command is referencing. This parameter is reserved for future use.

• `z` is the new value (for Set, Increment or Decrement commands) or the current value (for Get commands) for this parameter. It can have one of two formats:

    • **Integer value:** Any positive or negative number; for example, `100`.

    • **String value:** Any string surrounded by double quotes; for example, `"This is a string."`

• `[CR]` is the ASCII carriage return key (0x0D).

Here are some examples of serial commands and their responses:

Command	Command Data	Response
Power query when unit is powered on	`(PWR?) [CR]`	`(0;PWR=1) [CR]`
Set power to 0 (off)	`(PWR=0) [CR]`	`(0;PWR=0) [CR]`
Increment bright-ness from 24 to 25	`(BRT+) [CR]`	`(0;BRT=25) [CR]`
Invalid command	`(ZZZ=0) [CR]`	`(1;ZZZ=0) [CR]`
Invalid parameter (received string, expected integer)	`(CON="Some string") [CR]`	`(9;CON="Some string") [CR]`

Table 6-1 lists all supported commands.

Table 6-1. Serial Commands

Setting	Command Code	Read/ Write	Inc/ Dec	Min Value	Max Value	String?	Notes
Advanced Color Temp Auto Color Enable	AAC	R/W	No	0	1	No	0 = Off; 1 = On

6.2
Using Discrete IR Codes

The DHD Controller accepts commands in the form of IR signals that conform to the Phillips RC5 protocol. Each DHD Controller remote control button has an RC5 control code associated with it.

You can use these codes to program a third-party, "universal" remote control unit to work with the DHD Controller. These third-party products usually come with a computer software application for this purpose. For more information, consult the documentation provided with the remote control unit.

IR Command Protocol ➤ The IR control codes have the following characteristics:

- Each code consists of 14 bits:
  - Two (2) **start bits** (always 1);
  - A **toggle bit.** This bit is inverted every time a key is released and pressed again. This enables the DHD Controller to distinguish between a button that remains down and one that is pressed repeatedly.
  - Five (5) **address bits**. The default address is **17** (binary 10001). To change it, select Remote Code from the Miscellaneous menu (in the Service menu) and follow the steps given on page 80.
  - Six (6) **data bits**.
- The carrier frequency is 36 kHz, with the modulated pulses having a 25% duty cycle.
- Commands are sent at a maximum rate of 9 Hz.

For example, here is the RC5 control code for the **ON** button on the DHD Controller remote control unit (assuming the default address is used):

With Toggle Bit = 0													
Hex	3		4			4				1			
Binary	1	1	0	1	0	0	0	1	0	0	0	0	0	1
With Toggle Bit = 1													
Hex	3		C			4				1			
Binary	1	1	1	1	0	0	0	1	0	0	0	0	0	1
Function	**Start Bits**		**Toggle Bit**	**Address**				**Command**					

Figure 6-1 shows the pulse train for this command (with the toggle bit set to zero).
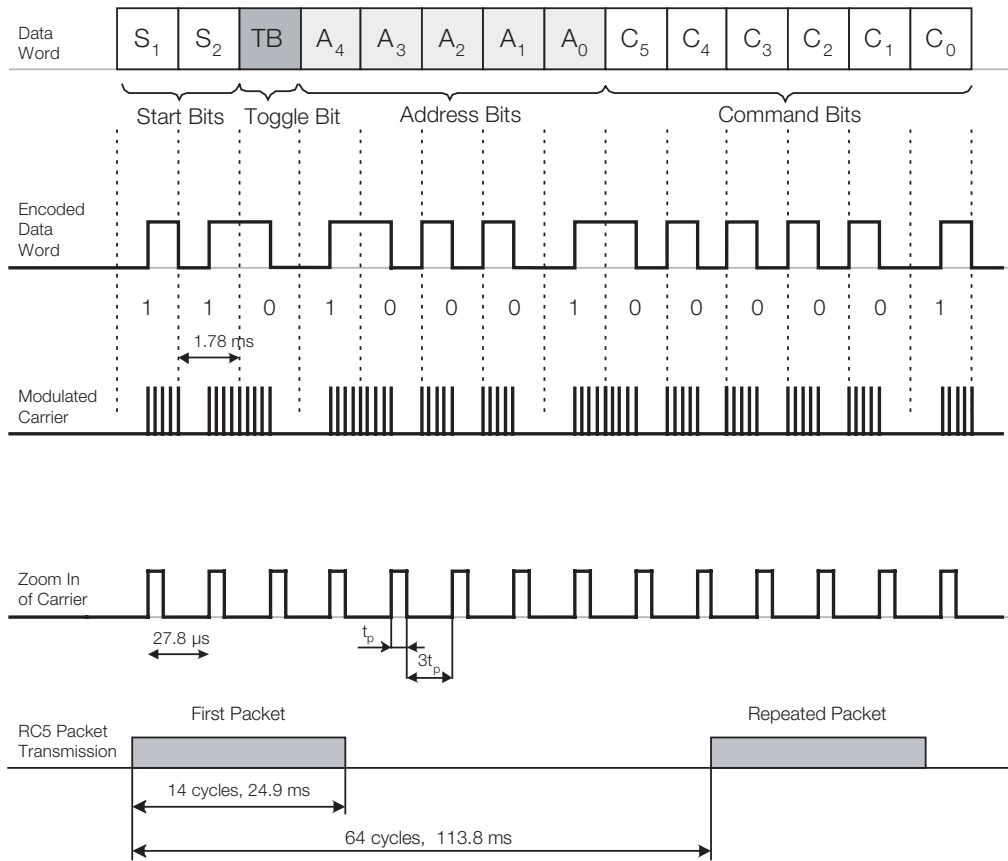

Figure 6-1. RC5 Message Format

IR Command List ➤ Table 6-2 lists the RC5 control codes for the DHD Controller.

Table 6-2. RC5 Control Codes for the DHD Controller

Function	RC5 Data from Remote Control (Note)	RC5 Data with Toggle Bit = 1 (Note)	Description
16:9	0x3449	0x3C49	16:9 aspect ratio
4:3	0x344A	0x3C4A	4:3 aspect ratio
CINEMA	0x346C	0x3C6C	Cinema aspect ratio
COMP	0x344E	0x3C4E	Component video input

SCART	0x3457	0x3C57	SCART video input
SCREEN1	0x3466	0x3C66	Selects "Screen 1"
SCREEN2	0x3467	0x3C67	Selects "Screen 2"
Note: These codes assume that the default address of 17 is used. If you change it to something other than 17, you will need to modify these codes accordingly.			

Table 6-2. RC5 Control Codes for the DHD Controller (continued)

Function	RC5 Data from Remote Control (Note)	RC5 Data with Toggle Bit = 1 (Note)	Description
STOFF	0x3460	0x3C60	Sets the sleep timer to Off
ST30MIN	0x3461	0x3C61	Sets the sleep timer to 30 minutes
ST60MIN	0x3462	0x3C62	Sets the sleep timer to 60 minutes
ST90MIN	0x3463	0x3C63	Sets the sleep timer to 90 minutes
ST2HRS	0x3464	0x3C64	Sets the sleep timer to 2 hours
ST4HRS	0x3465	0x3C65	Sets the sleep timer to 4 hours
UP	0x3445	0x3C45	Up-Arrow (▲)
VID 1	0x344D	0x3C4D	Composite video input 1
VID 2	0x3458	0x3C58	Composite video input 2
VID 3	0x3459	0x3C59	Composite video input 3
V-CINE	0x346D	0x3C6D	Virtual Cinema aspect ratio
V-WIDE	0x344C	0x3C4C	VirtualWide aspect ratio

Note: *These codes assume that the default address of 17 is used. If you change it to something other than 17, you will need to modify these codes accordingly.*

6.3
Using HDMI CEC Messages

The DHD Controller accepts and can respond to CEC command messages from a disc player, satellite receiver or DVR/set-top box via an HDMI connection. Using CEC, the DHD Controller can perform the following actions:

- Turn itself and the display device on and select the correct input when the source component initiates playback of a disc or recorded program.

- Turn the source component on when you switch to its corresponding input on the DHD Controller.

- Turn the source component off when the DHD Controller is turned off (unless the source component is in playback mode).

- Change its OSD language when a similar change is made at the source.

To use CEC, connect your CEC-compatible sources to the HDMI inputs on the Q-750d Ultra. Set the CEC option to **On** (refer to *CEC* on page 81). Additional steps may be needed to enable CEC at the source. Refer to the documentation for your source device for more information.

CEC Command List ➤ Table 6-3 lists the CEC commands supported by the DHD Controller.

Table 6-3. CEC Commands Supported by the DHD Controller

Opcode	Value	Supported? (√ = Yes, − = No)	
		Initiator	Follower
Feature Abort	0x00	√	√
Standby	0x36	√	√
Routing Change	0x80	√	√
Routing Information	0x81	√	√

User Control Released	0x45	−	√
Give OSD Name	0x46	−	√
Menu Request	0x8D	−	√
Give Device Power Status	0x8F	−	√

Note *The DHD Controller does not transmit HDMI CEC control messages from the "HDMI Audio Out" connector.*

Notes:

7. Specifications

Table 7-1 lists the Q-750d Ultra specifications.

Table 7-1. Q-750d Ultra Specifications

Projector Type:	Digital Light Processing™ (DLP™),Single-Chip, 16:9 SuperOnyx™ DMD™ with InfiniLight^{TM} Illumination
Illumination:	RGB InfiniLight^{TM} LEDs for 135% NTSC color gamut with Runco Smart Color^{TM} and Personal Color Equalizer^{TM}
Native Resolution:	Full HD, 1920 x 1080 (16:9)
Aspect Ratios:	Refer to Table 7-2
Video Standards:	Refer to Table 7-2
Video Compatibility:	480i, 480p, 576i, 576p, 720p, 1080i 50/60, 1080p 24/50/60
Picture Size (16:9 Screen):	Recommended Width: 72 in. (1.83 m) to 92 in. (2.34 m) Maximum Width: 108 in. (2.74 m)
Processing:	Runco DHD4 Processor with ViVix IV™ technology and BRiC (Backup, Recovery and Clone) tool
Control Options:	• Serial commands via RS-232 • Discrete infrared (IR) remote • Consumer Electronics Control (CEC) protocol support via HDMI • Ethernet
Calibration:	ISF Certified Calibration Configuration
Color Gamut:	Fully adjustable, > BT.709 (REC709)
Throw Distance (Factor x Screen Width):	Refer to Table 3-3
Vertical Offset:	35% of screen height above or below lens center (70% of one half of the screen height)
Horizontal Offset:	7.5% of screen width left or right of lens center (15% of one half of the screen width)
Inputs (from DHD Controller):	(1) HDMI with HDCP (1) RS-232

Table 7-1. Q-750d Ultra Specifications (continued)

Brightness and Contrast:	**Cinema Standards Measurement System (CSMS) Specifications** - Brightness: 29 foot-Lamberts (fL) - Contrast Ratio: 330:1 These measurements are taken from the projector in a controlled, home theater environment. All measurements are made to ANSI/NAPM IT7.228-1997 specifications using the Photo Research PR-650 SpectraColorimeter and Minolta LS-100 Luminance Meter, Video Essentials test DVD and a 1.3 gain, 72-inch wide screen. The projector is calibrated to a color temperature of 6,500K and has a minimum of 150 hours of usage. The foot-Lambert (fL) is the unit of measurement used in commercial movie theaters to express image brightness at the screen surface. The Society of Motion Picture and Television Engineers (SMPTE) specifies 16 fL as the target image brightness for film-based projectors using an open gate (without film in the projector). More importantly, today SMPTE specifies 12 fL as the target image brightness in Digital Cinema theaters. The foot-Lambert measurement is dependent on screen size, screen gain and projector light output. **Home Theater Calibration Specifications** - Light Output: 450 ANSI Lumens - Contrast Ratio: 330:1 These specifications are obtained by calibrating the projector as described above for CSMS measurements. **Industry-Standard Specifications** - Light Output: 700 ANSI Lumens - Contrast Ratio: 3 settings (Infinity:1, 20,000:1, 10,000:1 (sequential)) **ColorContrast™** Colors have up to 50% higher contrast than Mercury or Xenon lamp systems. These are typical projector brightness and contrast specifications found in most companies' sales literature. Runco includes these measurements in its literature to allow for direct comparison with other manufacturers' projectors. These measurements are typically taken at 9,000K to 13,000K to get expected performance data when the projector is used in professional, commercial and industrial displays.
Power Requirements:	100 to 240 VAC (auto-sensing), 50/60 Hz, 140 Watts typical (477.8 BTUs/hour)
Operating Environment:	50°F to 104°F (10°C to 40°C), 0% to 85% humidity (non-condensing)
Dimensions:	**Q-750d Ultra:** See Figure 7-1 **Q-750d Ultra/CineWide with AutoScope:** See Figure 7-2
Weight (including lens):	49.4 lbs. (22.4 kg)
Regulatory Approvals:	FCC Part 15 Class B, CE Class B, UL, cUL, CB, RoHS, WEEE, local conformances as required
Limited Warranty:	Two (2) years parts and labor from the date of shipment from Runco. Extended RuncoCare™, RedCarpet™, and PremierCare™ assurance available.
Maintenance:	Zero maintenance, solid state optical path.

Specifications are subject to change without notice.

Table 7-2 lists the DHD Controller specifications.

Table 7-2. DHD Controller Specifications

Aspect Ratios:	4:3, Letterbox, 16:9, VirtualWide, Cinema, Virtual Cinema, Native
Video Standards:	• HDMI and DVI with HDCP for digital video • Component and RGB HDTV (1080p, 1080i, 720p) • Component and RGB EDTV (576p, 480p) • Component and Composite SDTV (576i, 480i) • RGB SCART with adaptor • NTSC (M, 4.43) • PAL (B, G, H, I, N, M) • SECAM (M)
Inputs:	(4) HDMI with CEC and Deep Color (1) Component/SCART (3 x RCA) (2) Component/RGBHV (5 x BNC) (3) Composite
Outputs:	(1) HDMI with Deep Color to Q-750d Ultra (1) HDMI with Deep Color to second display or audio processor
Control Options:	• Front panel vacuum fluorescent display and keypad • Discrete infrared (IR) remote • RS-232 (female DB9) for serial commands • USB (type B female) for firmware upgrade • RS-232 (male DB9) for accessories • 3.5-mm wired IR input for Niles/Xantech-compatible IR systems • Consumer Electronics Control (CEC) protocol support via HDMI • Ethernet
Ethernet Communication:	RJ45 (female) for web server, e-mail, auto firmware upgrade and Telnet
RS-232 Communication Parameters:	19200 bps, no parity, 8 data bits, 1 stop bit, no flow control
Trigger Outputs:	(3) +12 VDC, each rated at 250 mA and thermal fuse-protected
Accessory Applications:	Runco Firmware Upgrader, Runco BRiC (backup, restore, clone), CalMAN by SpectraCal for automatic calibration
Power Requirements:	100-240V~, 47-63Hz, 0.45 Amps
Operating Environment:	41°F to 104°F (5°C to 40°C), 0% to 90% humidity (non-condensing); up to 10,000 feet (3,048 meters) altitude
Dimensions:	Width = 17.50 inches (444.5 mm) Depth = 11.19 inches (284.1 mm) Height = 3.75 inches (95.3 mm)
Weight:	15.4 lbs. (7.00 kg)

Table 7-2. DHD Controller Specifications (continued)

Regulatory Approvals:	cTUVus, FCC class B, CE, RoHS, China RoHS, WEEE, C-Tick, CCC, local conformances as required
Limited Warranty:	Two (2) years parts and labor from the date of shipment from Runco.

Specifications are subject to change without notice.
