All brand names and product names are trademarks, registered trademarks or trade names of their respective holders.

GENERAL

Every effort has been made to ensure accuracy, however in some cases changes in the products or availability could occur which may not be reflected in this document. Christie reserves the right to make changes to specifications at any time without notice. Performance specifications are typical, but may vary depending on conditions beyond Christie's control such as maintenance of the product in proper working conditions. Performance specifications are based on information available at the time of printing. Christie makes no warranty of any kind with regard to this material, including, but not limited to, implied warranties of fitness for a particular purpose. Christie will not be liable for errors contained herein or for incidental or consequential damages in connection with the performance or use of this material. Manufacturing facilities in Canada and China are ISO 9001 certified. Manufacturing facilities in Canada are also ISO 14001 certified.

WARRANTY

Products are warranted under Christie's standard limited warranty, the complete details of which are available by contacting your Christie dealer or Christie. In addition to the other limitations that may be specified in Christie's standard limited warranty and, to the extent relevant or applicable to your product, the warranty does not cover:

a. Problems or damage occurring during shipment, in either direction.

b. Problems or damage caused by combination of a product with non-Christie equipment, such as distribution systems, cameras, DVD players, etc., or use of a product with any non-Christie interface device.

c. Problems or damage caused by misuse, improper power source, accident, fire, flood, lightning, earthquake, or other natural disaster.

d. Problems or damage caused by improper installation/alignment, or by equipment modification, if by other than Christie service personnel or a Christie authorized repair service provider.

e. Use of third party product enclosures for environmental protection during outside use must be approved by Christie.

f. Problems or damage caused by use of a product on a motion platform or other movable device where such product has not been designed, modified or approved by Christie for such use.

g. Except where the product is designed for outdoor use, problems or damage caused by use of the product outdoors unless such product is protected from precipitation or other adverse weather or environmental conditions and the ambient temperature is within the recommended ambient temperature set forth in the specifications for such product.

h. Defects caused by normal wear and tear or otherwise due to normal aging of a product.

The warranty does not apply to any product where the serial number has been removed or obliterated. The warranty also does not apply to any product sold by a reseller to an end user outside of the country where the reseller is located unless (i) Christie has an office in the country where the end user is located or (ii) the required international warranty fee has been paid.

The warranty does not obligate Christie to provide any on site warranty service at the product site location.

PREVENTATIVE MAINTENANCE

Preventative maintenance is an important part of the continued and proper operation of your product. Failure to perform maintenance as required, and in accordance with the maintenance schedule specified by Christie, will void the warranty.

REGULATORY

The product has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the product is operated in a commercial environment. The product generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of the product in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at the user’s own expense.

CAN ICES-3 (A) / NMB-3 (A)

이 기기는 업무용(A급)으로 전자파적합등록을 한 기기이오니 판매자 또는 사용자는 이점을 주의하시기 바라며, 가정 외의 지역에서 사용하는 것을 목적으로 합니다.

ENVIRONMENTAL

The product is designed and manufactured with high-quality materials and components that can be recycled and reused. This symbol means that electrical and electronic equipment, at their end-of-life, should be disposed of separately from regular waste. Please dispose of the product appropriately and according to local regulations. In the European Union, there are separate collection systems for used electrical and electronic products. Please help us to conserve the environment we live in!

Introduction

This manual is intended for professionally trained operators of Christie high-brightness projection systems.

Only Christie qualified technicians who are knowledgeable about the hazards associated with high-voltage, ultraviolet exposure, and the high temperatures generated by the projector are authorized to assemble, install, and service the projector.

For complete D4K40-RGB product documentation and technical support, go to www.christiedigital.com.

Safety and warning guidelines

Read all safety and warning guidelines before installing or operating the projector.

This projector must be operated in an environment that meets the operating range specification. Use only the attachments and/or accessories recommended by Christie. Use of others may result in the risk of fire, shock, or personal injury.

Warning! If not avoided, the following could result in death or serious injury.

- This product must be operated in an environment that meets the operating range as specified in this document.
- Do not look directly into the lens when the light source is on. The extremely high brightness can cause permanent eye damage.
- EXTREME BRIGHTNESS! When accessing a restricted access location for product service or maintenance, avoid exposure to the product beam path by turning the product power off and disconnecting the product from AC power, or by shuttering the light source to avoid emissions from the front aperture.
- FIRE HAZARD! Keep hands, clothes, and all combustible material away from the concentrated light beam of the projector.
- Keep fingers and other body parts away from the moving parts in the product. Tie back long hair, and remove jewelry and loose clothing before manually adjusting the product.
- FIRE AND SHOCK HAZARD! Use only the attachments, accessories, tools, and replacement parts specified by Christie.
- Do not operate the product without a lens installed.
- Always use a lens plug when installing or moving the product. This prevents contaminants from entering the product.
- FIRE AND SHOCK HAZARD! Use only the attachments, accessories, tools, and replacement parts specified by Christie.

Caution! If not avoided, the following could result in minor or moderate injury.

- TRIP OR FIRE HAZARD! Position all cables where they cannot contact hot surfaces, be pulled, be tripped over, or damaged by persons walking on or objects rolling over the cables.
AC/power precautions

Read all safety and warning guidelines before connecting to AC power.

**Warning!** If not avoided, the following could result in death or serious injury.

- **SHOCK HAZARD!** Only use the AC power cord provided with the product or recommended by Christie.
- **FIRE AND SHOCK HAZARD!** Do not attempt operation unless the power cord, power socket, and power plug meet the appropriate local rating standards.
- **SHOCK HAZARD!** Do not attempt operation if the AC supply is not within the specified voltage and current, as specified on the license label.
- **SHOCK HAZARD!** The AC power cord must be inserted into an outlet with grounding.
- **SHOCK HAZARD!** Disconnect the product from AC before installing, moving, servicing, cleaning, removing components, or opening any enclosure.
- **SHOCK HAZARD!** Install the product near an easily accessible AC receptacle.

**Caution!** If not avoided, the following could result in minor or moderate injury.

- **FIRE HAZARD!** Do not use a power cord, harness, or cable that appears damaged.
- **FIRE OR SHOCK HAZARD!** Do not overload power outlets and extension cords.
- **SHOCK HAZARD!** Power supply uses double pole/neutral fusing.

Laser safety precautions

Read all safety and warning guidelines before operating the projector laser.

**Warning!** If not avoided, the following could result in death or serious injury.

- **PERMANENT/TEMPORARY BLINDNESS HAZARD!** No direct exposure to the beam must be permitted. Class 1 Laser Product - Risk Group 3 according to IEC 60825-1:2014 and IEC 62471:2006.
- **LASER RADIATION HAZARD!** This projector has a built-in Class 4 laser module. Never attempt to disassemble or modify the laser module.
- Possible hazardous optical radiation emitted from this product. (Risk group 3)
- Only Christie qualified technicians who are knowledgeable about the hazards associated with laser use, high-voltage, and high temperatures generated by the product are authorized to assemble, install, and service the Christie Laser Projection System.
- **Do not look directly into the lens when the light source is on.** The extremely high brightness can cause permanent eye damage.
- **Do not operate the product without all of its covers in place.**
Light intensity hazard distance

This projector has been classified as Risk Group 3 as per the IEC 62471:2006 standard due to possible hazardous optical and thermal radiation being emitted.

**Warning!** If not avoided, the following could result in serious injury.

- PERMANENT/TEMPORARY BLINDNESS HAZARD! Operators must control access to the beam within the hazard distance or install the product at the height that prevents exposure of spectators’ eyes within the hazard distance. The hazard zone must be no lower than 3.0 meters above the floor and the horizontal clearance to the hazard zone must be a minimum 2.5 meters.
- EXTREME BRIGHTNESS! Do not place reflective objects in the product light path.

The following diagram and table show the zones for ocular and skin hazard distances:

- A—Hazard zone. The region of space where the projection light from the laser-illuminated projector is above emission limits for Risk Group 2. The light intensity may cause eye damage after a momentary or brief exposure (before a person can avert his or her eyes away from the light source). The light may cause skin burns to occur.
- B—Hazard distance. Operators must control access to the beam within the hazard distance or install the product preventing potential exposure of the spectators’ eyes from being in the hazard distance.
- C—No access zone. Horizontal clearance of the no access zone must be a minimum of 2.5 meters.
- D—Vertical distance to hazard zone. The hazard zone must be no lower than 3.0 meters above the floor.
- E—Represents the top view of the projector.
- F—Represents the side view of the projector.

The following table lists the hazard distance for the Christie projector lens with the zoom adjusted to its most hazardous position.
For US market only, hazard distances based upon FDA guidance document 1400056, *Classification and Requirements for Laser Illuminated Projectors (LIPs)*, dated February 18, 2015.

For Installations in the United States

The following must be in place for laser-illuminated projector installations in the United States:

- Any human access to the hazard zone, if applicable, must be restricted by barriers to enforce the no access zone.

- Permanent show installations containing Risk Group 3 laser-illuminated projectors must meet the following conditions:
  - Installed by Christie or by Christie-authorized and trained installers.
  - Performed according to instructions provided by Christie.
  - Ensure the projection system is securely mounted or immobilized to prevent unintended movement or misalignment of the projections.
  - A copy of the FDA variance approval letter must be with the operator or other responsible individual.
  - FDA variances can be found in the online training course–Laser Illuminated Projection - Class 1 Risk Group 3 Installation.
  - Temporary show installations containing Risk Group 3 laser-illuminated projectors may be installed by Christie or sold or leased only to valid laser light show variance holders (laser light show manufacturers) for image projection applications. Such manufacturers may currently hold a valid variance for production of Class IIIb and IV laser light shows and/or for incorporation of the Risk Group 3 laser-illuminated projectors into their shows. This requirement applies also to dealers and distributors of these laser-illuminated projectors.
  - For temporary installations, the FDA variance holder must maintain complete records of all show itineraries with dates, locations, operator name, and contact information clearly and completely identified.
  - The Christie Laser Projection System Installation Checklist must be fully completed after the installation and sent to lasercompliance@christiedigital.com. A copy can remain on-site. This checklist can be found as a separate document in the accessory box with the manual.
  - If installing in the US states of Arizona, Florida, Georgia, Illinois and Massachusetts, go to www.christiedigital.com for additional regulatory requirements.

General hazard.

Electric shock hazard. To avoid personal injury, disconnect all power sources before performing maintenance or service.

Electrocution hazard. To avoid personal injury, always disconnect all power sources before performing maintenance or service procedures.

Hot surface hazard. To avoid personal injury, allow the product to cool for the recommended cool down time before performing maintenance or service.

Burn hazard. To avoid personal injury, allow the product to cool for the recommended cool down time before performing maintenance or service.

Optical radiation hazard. To avoid personal injury, never look directly at the light source.

Moving parts hazard. To avoid personal injury, keep hands clear and loose clothing tied back.

Fan hazard. To avoid personal injury, keep hands clear and loose clothing tied back. Always disconnect all power sources before performing maintenance or service procedures.

Voltage hazard. To avoid personal injury, always disconnect all power sources before performing maintenance or service procedures.

Not for household use.

**Mandatory action**

Disconnect all power sources before performing maintenance or service procedures.

Consult the service manual.
Electrical labels

Indicates the presence of a protective earth ground.

Laser labels

CLASS 1 LASER PRODUCT IEC 60825-1

Indicates a light hazard. Do not look directly into the lens. The extreme high brightness can cause permanent eye damage. Class 1 Laser Product - Risk Group 3 according to IEC 60825-1: 2014 and IEC 62471:2006

Indicates Class 4 laser radiation when open. Avoid eye or skin exposure to direct or scattered radiation.

FDA laser variance (US projectors only)

Product documentation

For installation, setup, and user information, see the product documentation available on the Christie website. Read all instructions before using or servicing this product.

D4K40-RGB

1. Access the documentation from the Christie website:
   - Scan the QR code using a QR code reader app on a smartphone or tablet.
2. On the product page, select the model and switch to the Downloads tab.

**Projector overview**

Learn about the D4K40-RGB projector.

D4K40-RGB is a professional quality, easy-to-use 3DLP® RGB laser projector. The high-brightness D4K40-RGB is designed to meet the special demands found in large venues, live events, and high-usage environments. With reliable Christie RealLaser™ illumination integrated in a rugged chassis and ultra-fast processing of Christie TruLife™ electronics, the D4K40-RGB is the go-to solution for demanding, large venue events and applications.

**Contact your dealer**

Record the information about your projector and keep this information with your records to assist with the servicing of your projector. If you encounter a problem with your Christie projector, contact your dealer.

### Key features

Understand the important features of the projector.

- Long lasting, reliable Christie RealLaser™ RGB laser illumination
- Compact form with direct-coupled laser source integrated into the projector chassis
- LiteLOC™ color lock feature for constant image brightness and color
- Omnidirectional operation for unrestricted design and installation flexibility
- Christie TruLife™ electronics for ultra-high resolution, high frame rate video up to 120 frames per second
- Christie Terra input card integrates into SDVoE networks
- Compatible with most Christie Boxer lenses
- Full-color LCD display to provide information at-a-glance
- Integrated keypad control interface

### List of components

Verify all components were received with the projector.

- Power cord
- IR remote keypad

Adjusting the image

Adjust the projector image. Christie recommends warming the lens before completing these procedures as focus may change as the lens warms.

Selecting screen image orientation

Specify the orientation to use for the image. The projector supports front projection, rear projection, front projection inverted, or rear projection inverted.

1. Select **MENU > Image Settings > Image Orientation**.
2. Select the required orientation from the list.
3. To confirm your selection, press **Enter**.

Setting the image resize preset

Set the image resize preset to determine if an image will display in its native resolution or will resize by maximizing the height, width, both height and width, or to the maximum size while keeping the original aspect ratio.

1. Select **MENU > Image Settings > Size & Position > Resize Presets**.
2. Select the appropriate resize preset:
   - **Auto**—Maximize for current source.
   - **No Resizing**—Display in native resolution.
   - **Full Size**—Fill the screen, regardless of source.
   - **Full Width**—Fill display width and keep aspect ratio.
   - **Full Height**—Fill display height and keep aspect ratio.
3. Select **Enter**.

Adjusting lens settings

Adjust various lens settings including the offset, zoom, focus, and locking the lens motor.

Adjusting offset

Adjust the offset to align the image on the screen. Always adjust offset before adjusting boresight.

For the best optical performance and minimal keystone, use offsets instead of aiming at the center of the image, in off-axis installations. Avoid extreme tilts or offsets. Corner vignettes on a white test pattern indicate extreme offset that should be avoided using mechanical alignment.

1. Project an image with the primary lens.
2. Select a framing test pattern.
3. Select LENS OFFSET.
4. Use the arrows to adjust the offset to display a square image on the screen, with minimal projector aiming error.
5. To exit to the home page, select Back.

**Resetting the lens to home position**
Set the lens offset back to the home position.

1. Select LENS OFFSET.
   - You can also select MENU > Configuration > Lens Settings > Lens Offset.
2. To reset the lens to the default home position, select Enter.
3. To confirm the reset, select OK.

**Aligning the image with lens zoom and focus**
Ensure that the image reflected from the digital micromirror device (DMD) is parallel and centered with the lens and screen.

1. Display an image or test pattern that can be used to analyze image focus and geometry.
2. Select ZOOM.
   - You can also select the zoom function from MENU > Configuration > Lens Settings > Zoom.
3. Use the up and down arrows to zoom in or out of the image.
4. To exit, select Back.
5. Select FOCUS.
   - You can also select the focus function from MENU > Configuration > Lens Settings > Focus.
6. Use the up and down arrows to adjust the focus of the image.
7. To exit, select Back.
8. To refine your adjusts, repeat steps 2 to 7.

**Locking the lens motor**
Prevents all lens motors from moving. It disables the zoom, focus, and offset settings, locking out any changes and overriding all other lens features. This feature prevents accidental lens position changes in multi-projector installations.

1. Select MENU > Configuration > Lens Settings > Lock all Lens Motors.
2. To enable locking of all lens motors, select Enter.

**Determining what lens warnings are displayed**
Controls the level of lens warnings displayed.

1. Select MENU > Configuration > Lens Settings > Lens Warnings.
2. Select the appropriate lens warning level:
• **Show All Warnings**—Shows all lens warnings.
• **Hide Zoom Motor Warnings**—Hides zoom motor warnings.
• **Hide Detection Warnings**—Hides lens detection warnings. Christie recommends selecting this option when using a third-party lens.

3. Select **Enter**.

### Adjusting primary colors

Calibrate the accuracy of primary colors, which can change because of lighting and environmental factors.

All primary colors in the projector are precisely set to pre-established values to ensure overall color performance is optimized and is as accurate as possible. Lighting and other environmental factors may slightly change how these colors appear on your screen. While the change is negligible in most cases, you may prefer to recover the originally intended color performance before trying to match colors from several projectors.

To achieve consistency use a color meter to measure the native primary colors—red, green, blue, and white—as they appear on the screen. On the basis of these new values, which are stored in memory, each projector automatically calculates any necessary corrections to reproduce the original factory colors under the current environmental conditions. This essentially calibrates a projector to its surroundings, compensating for factors such as screen type, light source and/or ambient lighting, and improves color accuracy and consistency in a group of projectors. It ensures a good starting point for further customizing and matching; however, is not critical for all installations.

1. From the display panel, select **MENU > Configuration**.
2. Select **Color Primary Settings**.
3. To edit the primary colors, select **Edit Primary Colors**.
4. Adjust the slider or enter the measured color values of the primary color component you selected.
5. To confirm your selection, select **Enter**.
6. Repeat steps 5 and 6 for each primary color component.
7. To view a specific color while adjusting, select **Show Color Pattern**.
8. Select the appropriate color and select **Enter**.
9. To reset the primary colors to their defaults, select **Reset Color Primaries**.
10. At the confirmation prompt, select **OK**.

### DMD color correction

Adjust the DMD color values as required.

### Adjusting color by precise chromaticity values

Change the values of the primary color components.

1. Select **MENU > Configuration > Color Correction by x,y**.
2. Adjust the slider or enter the measured color values of the primary color component you selected.
3. To confirm your selection, select Enter.
4. Repeat steps 2 and 3 for each primary color component.
5. To view a specific color while adjusting, select Show Color Pattern.
6. Select the appropriate color and select Enter.

### Adjusting color by saturation
Change the strength of the primary color in relation to the other primary colors.

1. Select MENU > Configuration > Color Saturation.
2. Adjust the value of the primary color you selected by using more or less of it in relation to the other primary colors.
3. To confirm your selection, select Enter.
4. Repeat steps 2 and 3 for each primary color.
5. To view a specific color while adjusting, select Show Color Pattern.
6. Select the appropriate color and select Enter.

### Signal color correction
Adjust the video signal color as required.

For best results, Christie recommends setting all color and gamma settings to Auto Detect.

### Adjusting the color space
Determine how the color components are decoded for accurate color in the display.

1. Select MENU > Image Settings > Color & Gamma > Color Space.
2. Select the adjustment most suited to the input signal:
   - Auto Detect
   - RGB (Full Range)
   - RGB (Limited Range)
   - YCbCr HDTV (Expanded Range)
   - YCbCr JPEG (Full Range)
   - YCbCr UHDTV (ITU-R BT.2020) (Full Range)
3. Select Enter.

### Adjusting color by temperature
Adjust the color temperature as expressed in degrees Kelvin.

1. Select MENU > Image Settings > Color & Gamma.
2. Select Color Temperature.
3. Adjust the slider to change the light to warmer or cooler and select Enter.
Selecting the color correction mode

Select the color correction mode most suited to the input signal.

1. Select **MENU > Image Settings > Color & Gamma > Color Correction Mode**.
2. Select the adjustment most suited to the input signal:
   - **Auto Detect**—Automatically detect the appropriate color correction mode, where possible.
   - **Max Drives**—All color adjustments are turned off, allowing the projector to run at maximum brightness.
   - **Color Temperature**—Specify a color temperature between 3200 and 9300, expressed in degrees Kelvin.
   - **HD Video**—Set the output color to a specific standard value. Adjusts the colors red, green, blue, and white.
   - **DCI P3**—Set the DCI P3 (cinema) colorimetry with DCI white point.
   - **DCI P3 (D65)**—Set the DCI P3 colorimetry with D65 white point.
   - **Custom**—Select a user defined set of color adjustments.
3. Select **Enter**.

Correcting for ambient light

Ambient light is the natural light that occurs in the environment where the projector is located.

1. Select **MENU > Image Settings > Color & Gamma > Ambient Light Correction**.
2. Select **Enter**.
3. Use the right and left arrows to adjust how the image displays in conditions with ambient light.
4. To confirm your selection, select **Enter**.

Setting the frame delay

Delay the output signal timing relative to the input signal timing by a fraction of a frame, and up to several frames.

The minimum latency can vary based on the amount of scaling applied to the image. When using keystone or warping, an additional latency is required, depending on the amount of warp.

1. Select **MENU > Image Settings > Advanced Image Settings > Frame Delay**.
2. To set the frame delay, select **Set Delay**.
3. Adjust the value and to confirm your selection, select **Enter**.
4. To set the achievable frame delay, select **Actual Delay**.
5. Adjust the value and to confirm your selection, select **Enter**.

Enabling film mode detect

Enables or disables the detection of film motion.

1. Select **MENU > Image Settings > Advanced Image Settings > Film Mode Detect**.
2. To enable the detection of film motion, select **Auto Detect**.
3. To disable the detection of film motion, select **Disabled**.
4. Select **Enter**.

### Adjusting the image sharpness

Change the sharpness of the image.

Lower settings can improve a noisy signal. Setting the sharpness above the halfway point can introduce noise in the image.

1. Select **MENU > Image Settings > Advanced Image Settings > Sharpness**.
2. Select **Enter**.
3. Use the right and left arrows to adjust the sharpness of the image.
4. To confirm your selection, select **Enter**.

### Creating a seamless image with edge blending

Combine several projected images into one single, seamless image with edge blending.

### Adding edge blends to the projector

Use Christie or to create edge blends and upload them to D4K40-RGB.

1. Create an edge blend file using the Christie or application.
   To connect D4K40-RGB with Christie or, use port 3003.
   Christie Twist Premium, Twist Pro, and offer advanced warping options. Refer to the Christie website (www.christiedigital.com) for product information and documentation.
2. Upload the edge blend file to the projector.
3. On one projector, select **MENU > Configuration > Edge Blending**.
4. Select the appropriate edge blend setting and select **Enter**.
5. Repeat steps 2 to 4 for the remaining projectors.
6. To turn off edge blending, from **MENU > Configuration > Edge Blending**, select **Off**.

### Enabling basic edge blending

Create basic edge blends directly on D4K40-RGB.

1. Start with two projectors and display the full white field test pattern from both.
2. On one projector, select **MENU > Configuration > Edge Blending**.
3. To enable basic edge blending, select **Basic**.
4. To edit blending adjustments, select **Edge Blend WIDTHS**.
5. From the Basic Blending dialog, select a side to blend.
6. To make the blending adjustments, use the arrow keys to change either the vertical and horizontal values as appropriate.
7. To accept the selection, select Enter.
8. Repeat steps 4 to 6 to blend the remaining sides.
9. When all adjustments are made, use the arrow keys to highlight Apply and select Enter.
10. Repeat steps 2 to 9 for the remaining projectors.
11. To turn off basic edge blending, from MENU > Configuration > Edge Blending, select Off.

**Resetting edge blending**
Reset the edge blending to revert any edge blends.
1. Select MENU > Configuration > Edge Blending.
2. Select Reset Edge Blends.
3. At the confirmation prompt, select Reset.

**Blending black levels for multiple projectors**
Use black level blending to modify the brightness of non-blended regions to match the elevated brightness levels of the blended regions.
You can adjust the black level intensity of multiple adjacent projected images to create one large seamless display.

**Enabling black level blending**
Enable black level blending to eliminate the differences between black levels when edge blending multiple projectors.
1. Select MENU > Configuration > Black Level Blending > Black Level Blending Mode.
2. Select Basic.
   To disable black level blending, select MENU > Configuration > Black Level Blending > Black Level Blending Mode > Off.

**Adjusting the black level blends**
Control how the edges of adjacent images are overlapped to create a seamless image.
1. Start with a minimum of two projectors and display the full black field test pattern from each projector.
2. On one projector, select MENU > Configuration > Black Level Blending > Black Level Blend Widths.
3. Set the black level blend widths of the top, bottom, left, or right edges (depending on which edge of the projector you are working with to black level blend).
   - To use the widths set by the edge blend, select Use Edge Blend Width Values.
     This option is selected by default.
   - To manually set the widths, use the arrow keys to enter the pixel values.
On the on-screen display or web UI, you can enter the number directly in the field using the remote or keyboard.
4. Select Apply.

5. Select MENU > Configuration > Black Level Blending > Black Level Blend Offset.

6. To adjust the brightness and black hues of the blended region, use the arrow keys to enter the pixel values.
   On the on-screen display or web UI, you can enter the number directly in the field using the remote or keyboard.

7. If using the web UI, you can adjust the brightness and black hues in more detail by modifying the values in the Fine Adjustment and Course Adjustment fields.

8. Select Apply.

9. Repeat steps 2 to 8 for the remaining projectors.

**Resetting black level blending**

Reset the black level blending to revert any black level blends.

Pressing Func+Help on the IR remote keypad disables all geometry corrections (warping, keystone, and black level blending) without changing the settings associated with them.

1. Select MENU > Configuration > Black Level Blending.

2. Select Reset Black Level Blends.

3. At the confirmation prompt, select Reset.

   After the reset, the black level blend offsets are set to 0, Use Edge Blend Width Values checkbox is selected, and the edge blend values are used; however, the black level blend widths are not set to zero.

**Geometry correction**

Modify the geometry for all sources.

**Enabling warping**

Use warping to project images on any surface shape.

1. Create a warp file using the D4K40-RGB or application.
   To connect D4K40-RGB with or , use port 3003.
   Christie Twist Premium, Twist Pro, and offer advanced warping options. Refer to the Christie website (www.christiedigital.com) for product information and documentation.

2. Upload the warp file to the projector.

3. Select MENU > Configuration > Geometry Correction > Geometry Correction Mode.

4. Select the appropriate warp setting and select Enter.

5. To turn off warping, from MENU > Configuration > Geometry Correction > Geometry Correction Mode, select Off.
   Pressing Func+Help on the IR remote keypad disables all geometry corrections (warping, keystone, and black level blending) without changing the settings associated with them.
Correcting the shape of a keystoned image

Keystone effect occurs when you project an image onto the screen at an angle and the projector is not centered on the screen. The image appears distorted and resembles a trapezoid.

To correct the shape of a keystoned image, use the keystone options available in the geometry correction menu. Perform coarse keystone adjustments by using the horizontal or vertical settings. It may not be possible to match the screen dimensions with the horizontal and vertical keystone controls but you can refine these settings by adjusting the 2D keystone settings.

Enabling keystone adjustments

Enable keystone corrections to correct the shape of a keystoned image.

1. Select **MENU > Configuration > Geometry Correction > Geometry Correction Mode.**
2. Select **Keystone.**
   - Any keystone adjustments previously set are enabled.
   - To disable keystone adjustments, select **MENU > Configuration > Geometry Correction > Geometry Correction Mode > Off.**

Adjusting the image with 2D keystone

2D keystone distorts the projected image both vertically and horizontally simultaneously and resembles a trapezoid.

Adjusting horizontal or vertical keystone correction after 2D keystone erases the 2D keystone settings; however, performing 2D keystone after horizontal or vertical correction retains the previous keystone setting.

1. Select **MENU > Configuration > Geometry Correction > Geometry correction Mode.**
2. Select **2D Keystone Correction.**
3. From the correction dialog, select the corner to adjust.
4. To make the keystone adjustments, use the arrow keys to change both the vertical and horizontal values.
5. Select **Apply Changes.**

Adjusting vertical keystone

Use vertical keystone to correct a keystoned image shape in which the top and bottom borders of the image are unequal in length, and both sides of the image are inclined toward the top or bottom edge.

If vertical keystone adjustments have been made, starting horizontal keystone adjustments erases the vertical settings.
1. Select **MENU > Configuration > Geometry Correction > Geometry Correction Mode.**
2. Select **Vertical Keystone Correction.**
3. From the correction dialog, adjust the vertical keystone by using the arrow keys.
4. Select **Apply Changes.**

**Adjusting horizontal keystone**

Use horizontal keystone to correct a keystoned image shape in which the left and right borders of the image are unequal in length, and the top and bottom are slanted to one of the sides.

If horizontal keystone adjustments have been made, starting vertical keystone adjustments erases the horizontal settings.

1. Select **MENU > Configuration > Geometry Correction > Geometry Correction Mode.**
2. Select **Horizontal Keystone Correction.**
3. From the correction dialog, adjust the horizontal keystone by using the arrow keys.
4. Select **Apply Changes.**

**Resetting keystone correction**

Reset keystone to revert the distorted image shape back to default values.

Pressing **Func+Help** on the IR remote keypad disables all geometry corrections (warping, keystone, and black level blending) without changing the settings associated with them.

1. Select **MENU > Configuration > Geometry Correction.**
2. Select **Reset Keystone Correction.**
3. At the confirmation prompt, select **Reset.**
Configuring system settings

Learn how to configure the system settings.

Setting the date
Configure the date on D4K40-RGB.
1. Select Menu > System Settings.
2. Select Date.
3. Use the up and down keys to adjust the year (YYYY), month (MM), and day (DD).

Setting the time
Configure the time on D4K40-RGB.
1. Select Menu > System Settings.
2. Select Time.
3. Use the up and down keys to adjust the hour (HH), minutes (MM), and seconds (SS).

Changing the splash screen
Select the color displayed on the screen.
1. Select MENU > System Settings > Splash Screen Settings > Background Color.
2. Select a splash screen background color:
   - Black
   - Red
   - Green
   - Blue
3. Select Enter.

Determining the on-screen display position
Choose one of the pre-defined locations for the display of the on-screen menus.
1. Select MENU > System Settings > Menu Preferences > OSD Position.
2. Select the location on the screen where you want the on-screen display menus to appear.
3. Select Enter.

Changing the language

Choose the language you want displayed on projector display panel and on-screen display.

1. Select MENU > Languages.
   You can also select the language from MENU > System Settings > Menu Preferences > Languages.
2. Select Enter.
3. Select the appropriate language and select Enter.
The change takes effect immediately.

Changing the temperature units

Set if the temperature is measured in Celsius or Fahrenheit.

1. Select MENU > System Settings > Menu Preferences > Temperature Units.
2. Select the temperature unit: Celsius or Fahrenheit.
3. Select Enter.

Resuming projector operation after an AC power interruption

If an AC power interruption occurs while Auto Power Up is enabled, the projector will resume operation in the same state it was prior to the loss of power.

1. Select MENU > System Settings > Power Settings.
3. To enable automatically powering up the projector after an AC interruption, select Enter.

Keeping electronics on in standby mode

When the projector is placed in standby mode, the light source will be turned off but the electronics will remain on.

1. Select MENU > System Settings > Power Settings.
2. Select Keep Electronics On In Standby.
3. To enable electronics remaining on in standby mode, select Enter.
Enabling direct pass-through of HDMI, 3G, and DisplayPort input signals

Allow the signals from HDMI, 3G, and DisplayPort inputs to pass through another projector.

1. Select MENU > Configuration > Input Settings > Enable Video Loop Out.
2. To enable passing HDMI, 3G, and DisplayPort input signals through to another projector, select Enter.

Informing the source of signal preferences

Configure D4K40-RGB to automatically inform the video source of the preferred signal formats.

1. If you need a specific frame rate, from the display panel, select MENU > Configuration > Input Settings > EDID Timing.
2. Select the required EDID timing and select Enter. 60 Hz is the default EDID timing.

Managing the light source

Learn how to configure laser drive levels and use the projector’s LiteLOC™ feature. The laser file allows you to control the power settings of the red, green, and blue (RGB) lasers. The LiteLOC™ feature ensures that color and brightness are held at the level you set.

You can create multiple profiles to manage varying screen sizes, brightness requirements, room temperatures in the projection booth, and types of content (such as 2D, 3D, and alternative content).

Configuring the laser power settings

Projector profiles contain the power settings for the RGB laser light source and the maximum expected room temperature for the projection booth.

The maximum power limit for red and green changes according to the value set for the maximum expected room temperature. For red, green, and blue power levels, system stability may be affected if levels are set below the minimum power limit shown.

To ensure color and brightness are held at the required levels for your installation, Christie recommends that you enable LiteLOC™ for each laser configuration you create.

When refining the laser power settings, the amount of time required to re-stabilize the projector depends on the size of the adjustment. For small adjustments to the expected room temperature or power settings, the projector requires only one or two minutes to re-stabilize. For larger adjustments, the projector may require up to 15 minutes to re-stabilize.

1. From the display panel, select MENU > Configuration > Light & Output Settings > LiteLOC.
2. To disable LiteLOC, select LiteLOC disabled.
3. To display the white test pattern, MENU > Test Pattern
4. Scroll through the list of test patterns and select White.
5. To confirm your selection, select Enter.
6. To indicate the maximum expected room temperature, select MENU > Configuration > Light & Output Settings > Max Ambient Temperature.

7. Use the slider to increase and decrease the maximum ambient temperature and select Enter. The system uses the maximum expected room temperature to calculate the light output. The default maximum expected room temperature setting is 25°C. A lower room temperature generally results in increased brightness and better efficiency. A higher room temperature reduces the maximum power setting available for the lasers. The maximum expected room temperature setting must reflect actual operating conditions.

8. Select MENU > Image Settings > Color & Gamma > Color Correction Mode.

9. Select Max Drives and to confirm your selection, select Enter.

10. Select MENU > Configuration > Light & Output Settings.

11. To set the approximate red power level, select Red Laser Setpoint and use the slider to increase and decrease the value required for your projection environment.

   System stability may be affected if you set a power level below the minimum power level recommended.

   When setting the red or green power level, Christie recommends setting a level below the maximum limit shown. A value below the maximum limit ensures an optimal brightness that can be maintained over time.

12. To set the green (Green Laser Setpoint) and blue (Blue Laser Setpoint) power levels, repeat step 11.

13. Allow the projector to stabilize for 15 minutes

14. If color or brightness is not at the target level, refine the red, green, and blue power settings to achieve the target by repeating steps 11 and 12.

15. Allow the projector to re-stabilize for an additional three to five minutes.

   The projector is considered stable when no further adjustments are required and you obtain the same screen state results after two sets of measurements, five minutes apart.

16. To lock the current color and brightness once the correct color and brightness are achieved and the projector has stabilized, select MENU > Configuration > Light & Output Settings > LiteLOC.

17. Select LiteLOC enabled.

18. To save the new laser settings, save to a projector profile.

Related information

Creating a new projector profile (on page 44)
Selecting a test pattern (on page 48)
Selecting the color correction mode (on page 23)

Setting up 1D color uniformity

Learn how to set up 1D color uniformity on the projector after taking measurement of each of the color primaries at points (15, 2, 5, 8, and 16).

1. Setup a spectroradiometer such as the PR-655 on a tripod.

2. Power on the projector.

3. Select MENU > Admin > Service.
4. Enter the service password.
5. Select **Engine Test Patterns**.
6. Select the **17 Point** test pattern.

![17 Point test pattern diagram]

7. To confirm your selection, select **Enter**.
8. Point the spectroradiometer at point 15 (far left, middle square).
   a) Change the engine test pattern to the **Red** test pattern.
      Select **MENU > Admin > Service > Engine Test Patterns > Red**.
   b) Record the luminance, x, and y values from the spectroradiometer.
   c) Change the engine test pattern to the **Green** test pattern.
      Select **MENU > Admin > Service > Engine Test Patterns > Green**.
   d) Record the luminance, x, and y values from the spectroradiometer.
   e) Change the engine test pattern to the **Blue** test pattern.
      Select **MENU > Admin > Service > Engine Test Patterns > Blue**.
   f) Record the luminance, x, and y values from the spectroradiometer.

9. For the remaining four points, repeat steps 3 to 6.
   - Point 2—Inside left, middle square
   - Point 5—Middle square
   - Point 8—Inside right, middle square
   - Point 16—Far right, middle square

10. Select **MENU > Configuration > Horizontal 1D Color Uniformity**.
11. To enable color uniformity, select **Color Uniformity Mode**.
12. Select **Enter**.
13. Input the measurements taken from the spectroradiometer for each of the color primaries at each point (15, 2, 5, 8, 16).
    Use the right and left arrows to adjust the values and select **Enter** to confirm your selection.
14. To verify 1D color uniformity is working, enable a flat white test pattern.

**Related information**

*Selecting an engine test pattern* (on page 50)
Turning on the projector with low voltage

Enable the projector to turn on even if the AC mains voltage is below specification.

1. From the display panel, select **MENU > Admin > Service**.
2. Enter the service password.
3. Select **Ignore Low AC Input Voltage Error**.
4. To ignore the Low AC Input Voltage error when turning on the projector, select **Enter**.
Configuring communications

Defines and controls how single or multiple projectors are linked with each other and with a controlling device.

Enabling projector communication

Enable the receivers and the wired keypad to communicate with the projector from the remote.

The front and rear IR sensors receive transmissions from the IR remote. Keep the transmission path to these sensors unobstructed for uninterrupted communications with the projector.

Alternatively, you can connect a wired version of the remote to the connector on the IMXB labeled Wired Keypad.

1. Select MENU > Communications > Projector Communications.
2. To assign the projector an ID, select Projector ID.
3. Use the up and down keys to enter the projector ID.
4. Select Enter.
5. To enable the front IR sensor, select Front IR Enabled and select Enter.
6. To enable the rear IR sensor, select Rear IR Enabled and select Enter.
7. To enable a wired version of the remote, select Wired Keypad Enabled and select Enter. By default this feature is enabled.
8. To enable HD control for video signals, Ethernet, or IR, select HDBaseT IR Extender Enabled and select Enter.

Setting the remote access level

Determine if and how the projector can be accessed remotely for the RS232 port or the Ethernet.

1. From the display panel, select MENU > Admin > Service.
2. Enter the service password.
3. To determine the remote access for the Ethernet port, select Remote Access Level (Ethernet).
4. Select the appropriate remote access level:
   • No Access
   • Login Required
   • Free Access
5. Select Enter.
6. To determine the remote access for the RS232 IN port, select **Remote Access Level (RS232 IN)**.
7. Select the appropriate remote access level:
   - No Access
   - Login Required
   - Free Access
8. Select **Enter**.

### Communicating with D4K40-RGB through Art-Net

D4K40-RGB supports communications through the Art-Net using the Ethernet connector.

1. Select **MENU > Communications > Art-Net Settings**.
2. Verify the **Enable Art-Net** option is disabled.
   - Disabling Art-Net before configuring it ensures D4K40-RGB does not accidentally respond to DMX messages destined for other devices on the network.
3. To specify which subnet the projector belongs to, in the Art-Net Subnet field adjust the value between 0 and 15.
   - The subnet provides expandability beyond the universe level.
4. To confirm your selection, select **Enter**.
5. To specify which universe the projector belongs to, so it can filter out all other data packets, in the Art-Net Universe field, adjust the value between 0 and 15.
   - For Art-Net, data is broadcast over an Ethernet network, so every device receives every packet of data, whether the device belongs to that universe or not.
6. To confirm your selection, select **Enter**.
7. To determine the starting channel for this projector, in the Base Channel field, adjust the value between 1 and 488.
   - If multiple projectors are used on the same universe and are to be controlled independently, this value must be changed. For example, if both projectors are using the Shutter (20 channels), projector 1 should start at base channel 1 and projector 2 should start at base channel 21.
8. To confirm your selection, select **Enter**.
9. Select **Enable Art-Net**.
10. To enable the Art-Net functionality, select **Enter**.

### Art-Net channel listing

There are 512 channels per universe. D4K40-RGB specifies 24 channels.

D4K40-RGB has multiple methods of being controlled in addition to Art-Net. If a setting is changed through another interface, the DMX controller can re-assert control by changing the value on the appropriate DMX channel.
<table>
<thead>
<tr>
<th>Channel</th>
<th>Name</th>
<th>Description</th>
<th>Suggested starting position</th>
<th>Notes</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>

</tr>
</tbody>
</table>
Channel | Name | Description | Suggested starting position | Notes |
---|---|---|---|---|
12 | Lens Vertical Position (Fine) | 255 = Full upper position (100%) | | • A 250 ms delay exists before sending this channel to the projector. |
13 | Input | 1 to 80 = Input index 86 = Load 91 to 170 = Additional input indices 171 = Execute | 0 | To change inputs, send the following sequence: Load > Input index > Execute. For a list of input indices, see Index list for the input channel (on page 38). Channel 1 slider lock can be used if a keypad is not available for the input selection. |
14 | Fade Time | 0 = 0 seconds 250 = 2.5 seconds | | Determines the length of time it takes for the shutter to open and close with a fading effect. |
15 to 24 | Reserved | Reserved for future use. | | |

**Index list for the input channel**
the following table provides the index information for the input channel.

Not all options listed in the table are available on all products. Available options depend on the projector model and the cards installed on the projector. The QSFP+ options require the Enable Christie Link option to be set.

</tbody>
</table>
Working with macros

Automate tasks in D4K40-RGB with macros so the same tasks can be done on a regular basis. If the date and/or time is changed on the projector, a macro may be unexpectedly executed.

Adding a macro

Create a macro to automate a repetitive task.

Up to 10 macros can be created.

This feature is only available on the web interface.

1. From the home page of the web interface, select **MENU > Macros and GPIO**.
2. Click the **Add Macro**.
   If the limit of 10 macros is reached, the **Add Macro** button is disabled and displays a Limit Reached message.
3. In the Name field, enter a meaningful name for the macro.
4. Verify that **Scheduled Event** is listed in the Type list.
5. In the Start Date field, select a date from the calendar.
6. In the Start Time field, use the up and down keys to adjust the hour (HH), minutes (MM), and seconds (SS).
   You can also manually enter the hour, minutes, and seconds.
7. To make this a reoccurring event, click **Recurring**.
   When enabled, the button appears green. When disabled, the button appears gray.
   a) To determine the recurrence pattern, under Every, select the day or days of the week you want run the macro.
   b) Determine the life of the macro.
      • To have the macro run indefinitely, select **No end date**.
      • To run the macro for a defined period of time, in the Recur for field, use the up and down keys to adjust the number of weeks.
      You can also manually enter the number of weeks. The limit is 99 weeks.
8. In the Serial Command field, enter the serial command(s) you want to run.
   For available serial commands and their syntax, refer to the **D4K40-RGB Serial Commands Guide (P/N: 020-102972-XX)**.
9. To test the functionality, click **Test**.
   An **Action succeeded** message is displayed upon a successful test.
10. To save the macro, click **Save**.
Copying a macro

Duplicate a macro to create another macro of similar functionality.
Up to 10 macros can be created.

1. From the home page of the web interface, select **MENU > Macros and GPIO**.
2. From the list of macros, click **Duplicate** next to the macro you want to copy.

   ![Duplicate button]

   If the limit of 10 macros is reached, the **Duplicate** button is disabled and the **Add Macros** button displays a Limit Reached message.
3. In the Name field, enter a meaningful name for the macro.
4. Modify the appropriate fields.
5. To save the macro, click **Save**.

Editing a macro

Edit the macro if the functionality of the macro has changed.

1. From the home page of the web interface, select **MENU > Macros and GPIO**.
2. From the list of macros, click **Edit** next to the macro you want to edit.

   ![Edit button]

3. Modify the appropriate fields.
4. To save the macro, click **Save**.

Deleting a macro

Delete one or more macros if they are no longer relevant.

1. From the home page of the web interface, select **MENU > Macros and GPIO**.
2. From the list of macros, select one or more macros to delete.
   - To delete all the macros in the list, click **Select All**. The number of macros you want to delete is displayed next to the trash can.
3. Click **Delete**.

   ![Trash can]

4. At the confirmation prompt, click **Delete**.
Configuring the GPIO

The Generic Purpose Input Output (GPIO) provides a flexible method of interfacing with external devices to the projector.

The GPIO is configured to automate real time events. Each of the seven pins is defined as either an input or output depending on the required outcome. The remaining two pins are reserved for ground and power.

Configure the pin as an input if you want the projector to respond to something the device does and as an output if you want the external device to respond to an action taken by the projector. For example, configure the pin as an output if you want the lighting in a room to automatically dim when the projector is turned on.

This feature is only available on the web interface.

1. From the home page of the web interface, select MENU > Macros and GPIO.
2. Select GPIO Configuration.
3. In the GPIO Configuration dialog under Update the New Configuration, toggle the pins you want active for the input and output.
   A blue pin indicates input and a green pin indicates output.
4. Select Apply.

GPIO connector

The GPIO connector located on the input panel provides a flexible method of interfacing with the projector. Seven GPIO pins are available on the nine pin D-Sub GPIO connector. Two other pins are reserved for ground and power.

<table>
<thead>
<tr>

</tbody>
</table>

All GPIO pins are weakly pulled up to 3.3V.
Setting up projector profiles

Use the projector profiles to store configured settings so you can switch between the profiles as required.

Creating a new projector profile

Save the projector configuration to a profile so you can revert to those saved settings any time. You can save up to 10 projector profiles.

1. Configure the projector settings you want to save to the profile.
2. Select MENU > Admin > Projector Profiles.
3. Select an empty profile.
4. Select New Profile.
5. Select Save.

Importing a projector profile

Import projector profiles set on different projectors using a USB flash drive.

1. Insert the USB flash drive containing the projector profile file into the USB port on the projector.
2. Select MENU > Admin > Projector Profiles.
3. Select an empty profile.
4. Select Import From File.
5. From the File Selection dialog, select a projector profile file. The projector profile file is imported to the projector.

Restoring settings from a profile

Return the projector to the configuration specified in a specific projector profile.

1. Select MENU > Admin > Projector Profiles.
2. Select an existing profile.
3. Select Restore Profile.
4. From the Restore dialog, select the settings you want to restore.
5. Select Restore.
Renaming a projector profile

A newly created projector profile is given the name of the projector with the date the profile was saved, for example, . You can change the name of the saved profile to a more meaningful name.

1. Select **MENU > Admin > Projector Profiles**.
2. Select an existing profile.
3. Select **Rename Profile**.
4. Use the up and down keys to enter the new name of the profile.
5. Select **Save**.

**Exporting a projector profile to an external device**

Save the projector settings to a USB flash drive.

1. Insert a USB flash drive (properly formatted as FAT) into the USB port on the projector.
2. Select **MENU > Admin > Projector Profiles**.
3. Selecting an existing profile.
4. Select **Export to File**.
   A default name is assigned.

**Deleting a projector profile**

If the settings in the projector profile are no longer relevant, delete the profile.

1. Select **MENU > Admin > Projector Profiles**.
2. Select the profile you want to delete.
3. Select **Delete Profile**.
4. At the confirmation prompt, select **Delete**.
Back up, restore, and upgrade files

Learn how to back up, restore, and upgrade files.

Upgrading the D4K40-RGB software

When a new version of the software is released, D4K40-RGB must be upgraded.

1. Turn off the lasers before proceeding with the upgrade.
2. Insert a USB key that contains the software upgrade file.
   - The USB flash drive must be formatted using the FAT 32 file system.
   - The upgrade file must be located at the root of the USB key.
3. From the display panel, select MENU > Admin.
4. Select Software > Upgrade.
5. Select an upgrade file and select Enter.
6. To automatically restart D4K40-RGB, select Restart Now.
   - If you decide to restart D4K40-RGB at a later date (Restart Later), you cannot perform another upgrade until the D4K40-RGB is restarted.

Exporting backup settings to an external device

Save the D4K40-RGB settings to a USB flash drive (projector) or file (web interface).

1. If using the display panel to export settings, insert a USB flash drive (properly formatted as FAT) into the USB port on D4K40-RGB.
2. Select MENU > Admin > Backup & Restore.
3. Select the backup option.
   - On the projector, select Backup to USB.
   - On the web interface, select Backup to File.
   - A default name is assigned.
4. To edit the backup file name, select the up arrow and select Enter.
5. To save the name, navigate down and select SAVE.
   - The backup file is exported.
Importing a file from an external device to restore settings

Restore backed up files, stored on a USB flash drive (projector) or file (web interface), onto the projector.

1. If using the display panel to import the file, insert the USB flash drive containing the backup file into the USB port on the projector.
2. Select **MENU > Admin > Backup & Restore**.
3. Select the restore option.
   - On the projector, select **Restore from USB**.
   - On the web interface, select **Restore from File**.
4. From the File Selection dialog, select a file to restore.
   The backup settings file is imported to the projector.

Restoring projector default settings

Restore the D4K40-RGB settings back to the default values. Network configurations and calibration values are not reset.

1. From the display panel, select **MENU > Admin > Backup & Restore**.
2. Select .
   All customized settings are set to the default D4K40-RGB settings.
Diagnostic tools

Follow these procedures to help with diagnosing issues with D4K40-RGB.

Viewing D4K40-RGB information

View the licenses for the software added to D4K40-RGB and the licenses of the software used to operate D4K40-RGB. The information is read-only.

1. To view the additional software added to D4K40-RGB, select MENU > Admin > Licenses.
2. To view the software licenses used to run D4K40-RGB, select MENU > Admin > About.

Freezing an image

Use the Freeze Image diagnostic tool to examine in detail a still version of an incoming image. For example, in moving images sometimes it is difficult to observe artifacts such as external de-interlacing/resizing and signal noise.

1. Select MENU > Admin > Diagnostics.
2. To enable freezing of an image, select Freeze Image and select Enter.
3. To return to normal operation, select Enter again to clear the checkbox.

Test patterns

Use the projector to assist with configuration of the projector and to diagnose any issues that may occur.

Selecting a test pattern

21 test patterns are available to assist with the configuration of the projector and to diagnose any issues that may occur.

1. From the side panel home page, use the arrows to select Test Pattern.
   You can also select the test patterns from MENU > Test Pattern or MENU > Diagnostics > Test Pattern.
2. Scroll through the list of test patterns.
3. Select the required test pattern.
4. To confirm your selection, select Enter.
Modifying grey level test pattern characteristics

Set the level of grey displayed in the full grey test patterns.

1. Select MENU > Admin > Diagnostics.
2. Select Test Pattern.
3. Select one of the grey test patterns: GREY SCALE 16 or FLAT GREY.
4. Select Enter.
5. To change the grey scale of the test pattern, select Test Pattern Grey Level and adjust the slider to the value you want.
6. To confirm your selection, select Enter.

Modifying ramp test pattern characteristics

Modify the characteristics for the associated ramp video signal test patterns.

1. Select MENU > Admin > Diagnostics.
2. Select Test Pattern.
3. Select one of the ramp test patterns: RGBW RAMP, HORIZONTAL RAMP, VERTICAL RAMP, or DIAGONAL RAMP.
4. Select Enter.
5. To enable movement of the test pattern, select Test Pattern Ramp Motion and select Enter.
6. To change the slope of the ramp test pattern, select Test Pattern Ramp Slope and adjust the slider to the value you want.
7. To confirm your selection, select Enter.
8. To change the level of the ramp test pattern, select Test Pattern Ramp Level and adjust the slider to the value you want.
9. To confirm your selection, select Enter.

Modifying grid test pattern characteristics

Modify the characteristics for the associated grid test patterns.

1. Select MENU > Admin > Diagnostics.
2. Select Test Pattern.
3. Select one of the grid test patterns: SQUARE GRID or DIAGONAL GRID.
4. Select Enter.
5. To change the pitch of the grid test pattern, select Test Pattern Grid Pitch and adjust the slider to the value you want.
6. To confirm your selection, select Enter.
7. To change the color of the grid, select Test Pattern Grid Color and select Enter.
8. To enable movement of the test pattern, select Test Pattern Grid Motion and select Enter.
Enabling a specific test pattern color

You can enable a specific test pattern color to eliminate one or more colors to help with certain diagnostics and setups, such as overlaying one image on top of another from stacked projectors.

1. From the side panel home page, use the arrows to select Test Pattern. You can also select the test patterns from MENU > Test Pattern.
2. Select the Flat White test pattern.
3. To confirm your selection, select Enter.
4. On the IR remote keypad, press Func+6+<0 to 7>. Where <0 to 7> represents a specific color.

Selecting an engine test pattern

Several engine test patterns are available to assist with the calibration and internal optical alignments of the projector and to diagnose any issues that may occur.

1. Select MENU > Admin > Service.
2. Enter the service password.
3. Select Engine Test Patterns.
4. Scroll through the list of test patterns.
5. Select the required test pattern.
6. To confirm your selection, select Enter.
7. To disable the engine test patterns, select MENU > Admin > Service > Engine Test Patterns > Off.

Viewing D4K40-RGB status

Alarms contain information about the values of the items operating in normal range, warnings, and errors that can be reported by the status system of D4K40-RGB.

1. From the display panel, select Status. You can also view the statuses from MENU > STATUS.
2. Scroll to the status category you want to view and select it.

Running the D4K40-RGB interrogator

The interrogator captures diagnostic information Christie personnel uses to help diagnose and correct any issues.

1. Insert a USB flash drive in the USB port on D4K40-RGB. The USB flash drive must be formatted using the FAT 32 file system.
2. From the display panel, select MENU > Admin > Interrogator.
3. Select Run. The interrogator file is stored at the root directory on the USB flash drive.
4. At the completion prompt, select OK.
Identifying where alarm and trap messages are sent

Configure the email address and SNMP trap destination where alarms are recorded. Creating a distribution mailing list for SNMP alerts means that changes to the people receiving the emails does not require a change to the MIB browser configuration.

Setting the SNMP read community string

The SNMP read community string is similar to a userid or password that allows access to the device.

1. Select **MENU > Communications > SNMP > SNMP Read Community**.
2. Use the up and down arrows to enter the read community string.
3. To confirm your selection, select **Enter**.

Configuring traps

A trap is a condition that SNMP monitors on D4K40-RGB.

1. Select **MENU > Communications > SNMP > Trap Configuration**.
2. Select the trap you want to enable and select **Enter**.
   The available traps are:
   - Fan Stall
   - Thermal Sensors
   - Power
3. To enable additional traps, repeat step 2.

Defining a trap IP address

When a trap condition is met, a notification is sent using an SNMP notification to one or more specified IP addresses.

1. Select **MENU > Communications > SNMP**.
2. Select **Address 1**.
3. Use the up and down arrows to enter an IP address.
4. To confirm the address, select **Enter**.
5. To add a second and third IP address, repeat steps 2 to 4 for **Address 2** and **Address 3**.

Restoring factory default settings

Restoring factory settings removes all custom device settings.

Only Christie qualified technicians can reset factory defaults.

1. From the display panel, select **MENU > Admin**.
2. Select **Reset Factory Defaults**.
All customized settings are set to the default factory settings.

3. At the confirmation prompt, select **Reset**.
Regulatory

This product conforms to the latest regulations and standards related to product safety, environmental, and electromagnetic compatibility (EMC) requirements.

Safety

Electro-magnetic compatibility

Emissions

- CAN ICES-003 (A)/NMB-003 (A) – Information Technology Equipment (Including Digital Apparatus) – Limits and Methods of Measurement
- FCC CFR47, Part 15, Subpart B, Class A – Unintentional Radiators
- IEC 61000-3-3/EN61000-3-11:2000 – Limitations of Voltage Changes, Voltage Fluctuations, and Flicker
- IEC 61000-3-2/EN61000-3-12:2011 – Limits for Harmonic Current Emissions
