IMPORTANT SAFETY INFORMATION

Precautions
Please read this manual carefully before using your PLUS Data Projector and keep the manual handy for future reference.

This User’s Manual is for use with both Model U4-232 and U4-232h. The external appearance of these models is the same, but the picture color adjustment (Quick Color Adj.) and the brightness differ.

⚠️ CAUTION
TO PREVENT SHOCK, DO NOT OPEN THE CABINET. NO USER-SERVICEABLE PARTS INSIDE. REFER SERVICING TO QUALIFIED PLUS SERVICE PERSONNEL.

This symbol warns the user that uninsulated voltage within the unit may have sufficient magnitude to cause electric shock. Therefore, it is dangerous to make any kind of contact with any part inside of this unit.

This symbol alerts the user that important literature concerning the operation and maintenance of this unit has been included. Therefore, it should be read carefully in order to avoid any problems.

The above cautions are given on the bottom of the product.

⚠️ WARNING
TO PREVENT FIRE OR SHOCK, DO NOT EXPOSE THIS UNIT TO RAIN OR MOISTURE. DO NOT USE THIS UNIT'S GROUNDED PLUG WITH AN EXTENSION CORD OR IN AN OUTLET UNLESS ALL THREE PRONGS CAN BE FULLY INSERTED. DO NOT OPEN THE CABINET. THERE ARE HIGH-VOLTAGE COMPONENTS INSIDE. ALL SERVICING MUST BE DONE BY QUALIFIED PLUS SERVICE PERSONNEL.

⚠️ WARNING
This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

RF Interference

⚠️ WARNING
The Federal Communications Commission does not allow any modifications or changes to the unit EXCEPT those specified by PLUS Vision in this manual. Failure to comply with this government regulation could void your right to operate this equipment. This equipment has been tested and found to comply with the limits for a Class A digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference when the equipment is operated in a commercial environment. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instruction manual, may cause harmful interference to radio communications. Operation of this equipment in a residential area is likely to cause harmful interference in which case the user will be required to correct the interference at his own expense.

DOC Compliance Notice
This Class A digital apparatus meets all requirements of the Canadian Interference-Causing Equipment Regulations.

Hg: Lamp in This Product Contains Mercury. Dispose of Lamp According to Local, State or Federal Law.
Important Safeguards
These safety instructions are to ensure the long life of the unit and to prevent fire and shock. Please read them carefully and heed all warnings.

Installation
• For best results, use the unit in a darkened room.
• Place the unit on a flat, level surface in a dry area away from dust and moisture.
• Do not place the unit in direct sunlight, near heaters or heat radiating appliances.
• Exposure to direct sunlight, smoke or steam can harm internal components.
• Handle the unit carefully. Dropping or jarring can damage internal components.
• Do not place heavy objects on top of the unit.

Power Supply
• The unit is designed to operate on a power supply of 100 - 240 V 50/60 Hz AC. Ensure that your power supply fits these requirements before attempting to use the unit.
• Handle the power cable carefully and avoid excessive bending. A damaged cord can cause electric shock or fire.
• Disconnect the power cable (mains lead) from the power outlet after using the unit. Before disconnecting the power cable, make sure that the STANDBY indicator lights in amber (not blinking or in green).

Cleaning
• Disconnect the power cable (mains lead) from the unit.
• Clean the cabinet of the unit periodically with a damp cloth. If heavily soiled, use a mild detergent. Never use strong detergents or solvents such as alcohol or thinner.
• Use a blower or lens paper to clean the lens, and be careful not to scratch or mar the lens.
• Clean the ventilation slots and speaker grills on the unit periodically using a vacuum cleaner. If accumulated dust blocks the ventilation slots, the unit will overheat, which may cause the unit to malfunction. Use a soft brush attachment when using the vacuum cleaner. Do not use a hard attachment, such as a crevice tool, to prevent the damage to the unit.

Lamp Replacement
• Be sure to replace the lamp when the Status indicator comes on. If you continue to use the lamp after 1500 hours of usage, the lamp will turn off.

Fire and Shock Precautions
• Ensure that there is sufficient ventilation and that vents are unobstructed to prevent the buildup of heat inside the unit. Allow at least 10 cm (3 inches) of space between the unit and walls.
• Prevent foreign objects such as paper clips and bits of paper from falling into the unit. Do not attempt to retrieve any objects that fell into the unit. Do not insert any metal objects such as a wire or screwdriver into the unit. If something should fall into the unit, immediately disconnect the power cable from the unit and have the object removed by a qualified PLUS service person.
• Do not place any liquids on top of the unit.

Carrying around
When carrying the unit around, please use the carrying case that comes with it and, to protect the lens from scratches, always shut the sliding lens cap. Also, do not subject the unit to strong mechanical shock.

CAUTION – HOT!
The area around the exhaust vents is hot during and immediately after image projection. To avoid burns, keep your hands away from this area. Wait until the exhaust vents area cools off before touching it.

Do not look into the lens while the unit is on. Serious damage to your eyes could result.
Major Features

- **Lightweight (at about 1.5 kg/3.3 lb) high-intensity mobile projector**
  The synergy of the DLP™ (Digital Light Processing) display system and our own optical design serve to improve the optical utilization efficiency. The three primary colors (RGB) required in color expression are reproduced with one DMD (Digital Micromirror Device of high precision). These factors have enabled a design that offers both high intensity and small size/lightweight features.

- **Sharp, clear picture**
  The DLP™ display system affords RGB color fidelity and inconspicuous gaps between the individual dots, thereby permitting the display of small characters and diagrams with distinct clarity.

- **High contrast ration of 2000:1**
  Use of a new generation of DMD devices has given birth to an amazing 2000:1 high contrast ratio. By widening the difference of brightness between black and white, you can see a degree of sharpness that is greater than just the brightness based on specifications.

- **Great moving image playback capabilities using the same principles as DLP Cinema technology**
  Plus DLP type projectors have the same makings as the DLP Cinema technology used in movie theaters. Because of their extremely fast response, even images with much movement – sports, movies – play smoothly without blurring.

- **Security lock function**
  The lock can be set so that a password must be input when the projector is started up. Without the correct password, no operations other than turning the power on and off can be performed. This function effectively protects the projector from unauthorized use.

- **Powerful functions for presentations**
  A wide variety of easy-to-set functions have been built into the projector, from a digital keystone correction function (used when making settings) that corrects picture distortion, to an auto adjustment function that automatically identifies the PC signal. There is also a built-in “Presentation Timer” function for further presentation convenience.

- **Beautiful reproduction of high-quality images from DVD**
  Faithful reproduction of color tones gives rise to the display of natural images. High-quality images such as those from DVD and digital high-definition television broadcasts bring out the display capabilities that are an essential strength of the DLP™ display system projector.

- **Digital/analog RGB input**
  by using a DVI cable to connect the projector with a personal computer equipped with a DVI connector. This will allow fully digital pictures to be enjoyed.

- **Econo-mode switch function for the lamp output**
  Using the lamp Econo-mode will extend the life of the lamp and lower the power consumption. By switching the lamp mode to suit your operating environment, you will save on lamp cost as well as contribute to energy conservation and ecology.

Checking the Supplied Accessories

Remove the main unit and the accessories from the box and check that the following items are included.

**Remote control (includes one button battery) [1]**
This controls the projector. Please remove the transportation insulation sheet at time of purchase. (See Page E-11.)

**Power cable (1.8 m / 5.9 feet) [1]**
This power cable supplies power to the unit. See Page E-21 about connections.

**DVI / Mini D-sub 15-pin conversion cable (2 m / 6.6 feet) [1]**
This is used in making connections with a personal computer. See Page E-16 about connections.
No. 776702000

**Video cable (RCA pin plug, 2 m / 6.6 feet) [1]**
This cable is used in the connection of video equipment that has a video connector. Connections are described on Page E-18.
No. 771703000

**S-Video cable (Mini DIN 4-pin plug, 2 m / 6.6 feet) [1]**
This cable is used in the connection of video equipment that has an S-video connector. Connections are described on Page E-18.
No. 771709000

**Audio conversion adapter (Mini plug / RCA pin plug, 15 cm / 0.5 feet) [1]**
This cable is used with equipment whose audio connector is of the phono pin type. Connections are described on Page E-20.
No. 770704000

**Audio cable (Mini plug, 2 m / 6.6 feet) [1]**
This cable is used with equipment that has phono type audio jacks. Connections are described on Page E-20.
No. 769710000

---

[1] Indicates included items.
Checking the Supplied Accessories

Carrying case (for projector and accessories) [1]
This is a case designed for storing the projector and its accessories.
Use this carrying case when storing or moving the projector.

User’s Manual (Simplified Edition) [1]

“WARNING”
Handling the cables supplied with this product, will expose you to lead, a chemical known to the State of California to cause birth defects or other reproductive harm.
Wash hands after handling.
Names of the Main Unit Parts

- Exhaust vents
- Remote control sensor [E-12]
- Focus ring [E-25]
- Lens
- Zoom ring [E-24]
- Front adjuster button [E-25]
- (There is also one on the right side.)
- Lens cap
  Remove before use. Attach the lens cap after use to protect the lens.
- Ventilation slots
- Rear adjuster [E-25]
- Front adjusters [E-25]
- Lamp cover [E-59]
Names of the Main Unit Parts

Built-in Security Slot
This security slot supports the MicroSaver Security System manufactured by Kensington Microware Inc.

- Built-in Security Slot

- QUICK MENU button

SELECT (▲▼►) buttons

Ventilation slots

PC connector [E-15, 16, 19]

A separately sold “VR-100 Remote Mouse Set” (ordering code: 28-052) is required to use the MOUSE connector.

Built-in security slot
(See description below.)
Names of the Remote Control Parts

STANDBY button [E-21, 23]
This button is used to switch ON the power and set the unit to the STANDBY mode.

Buttons used for menu operations [E-35]
The \( \Delta \), \( \downarrow \), \( \uparrow \), and \( \rightarrow \) buttons are the select (\( \Delta \), \( \downarrow \), \( \uparrow \), and \( \rightarrow \)) buttons.

Buttons used for input selection [E-26]
RGB button and VIDEO button (VIDEO / S-VIDEO)

MUTE button [E-28]
(Temporarily cancels the video and audio)

Number buttons [E-32]
(Used for the security lock.)

FREEZE button [E-28]
(Freezes moving pictures)

VOL button [E-29]
(Volume adjustment)

KSTN button [E-29]
(Keystone correction adjustment)

QUICK button [E-34]
(Displays a simplified menu)

ECO button [E-28]
(Selection of lamp mode)

AUTO button [E-26]
(Automatic adjustment of the Analog RGB moving image)

ASPECT button [E-27]
(Selects the vertical and horizontal ratio of the screen)

TIMER button [E-31]
(Presentation timer time setting display)

ZOOM button [E-30]
(Digital zoom adjustment)

Infrared transmitter [E-12]

Note
If a button on the remote control unit is held in continuously for approximately 30 seconds, signal transfer will be suspended. To resume transferring signals, press the button again.

Precautions
Handling of the Remote Control
* Do not drop the remote control or handle it inappropriately.
* Do not expose the remote control to water or other liquids. Should the remote control become wet, wipe it dry immediately.
* Try to avoid use in hot and/or humid locations.
* Please keep button battery out of the reach of children. If a battery is swallowed, promptly obtain the medical care of a doctor.
* Remove the battery from the remote control when it is not going to be used for a long period.
* Some operations (such as menu operations) are available only through the use of the remote control and attention should be given to its careful handling.
Preparing the Remote Control

Button Battery Replacement

Using the remote control for the first time
The battery compartment is fitted with a transportation insulation sheet at the time of shipping. Pull out the sheet and remove it. The remote control is now ready for use.

Replacement Method

1. (A) With the knob pressed to the right side, (B) draw out the battery case.
2. Remove the old battery and install a new button battery with (+) side facing upward in the battery holder.
3. Insert the battery holder into the remote control and push in until the battery holder closes with a “click” sound.

Purchase a CR2025 type battery for replacement.

CAUTION
Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type (CR2025) recommended by the manufacturer.
Dispose of used batteries according to your local regulations.

Remote Control Range

Point the infrared transmitter of the remote control toward the remote control sensor located at the front or rear of the main unit and operate.
Reception of the remote control signal should generally be possible within the range illustrated below.

![Remote Control Range Diagram]

Note
* Exposure of the main unit’s remote control sensor or the remote control infrared transmitter to bright light or the obstruction of the signal by an obstacle located in the pathway may prevent operation.
* The remote control will not function when the battery is exhausted.
The Procedure Up to Projecting to the Screen

Perform setup adjustments in the following order.

1 **Position the projector**
   
   Determine the locations to set up the screen and the projector.
   

2 **Connect the video equipment and personal computer**

   **Connect your equipment to the projector.**
   
   When making connections with the personal computer’s DVI connector or RGB connector, see “Connections with Personal Computers” on Page E-15.
   
   When making connections with the video equipment’s video connector or an S-video connector, see “Connections with Composite Signals” on Page E-18.
   
   When making connections with the video equipment’s YCbCr connector or YPbPr connector, see “Connections with Component Signals” on Page E-19.
   
   When playing the audio through the built-in speaker of the projector, see “Connections with Audio Connectors” on Page E-20.

3 **Opening the lens shutter or lens cap**

4 **Connecting the power cable and switching on the power**

   
   See “Finishing” on Page E-23.

5 **When selecting the language of menu displays, etc.**

   **(Only when the power is first switched on following purchase)**
   

6 **Switching on the power of the personal computer and video equipment**

7 **Properly adjust the projection image to the screen**

8 **Selecting input equipment**

9 **Adjust the screen or video image**

   Adjust the image to the optimum condition as required.
   
   See the Table of Contents for the adjustment items.

---

**About DLP projectors**

Though careful attention is paid to providing optimum quality, please note that with DLP type projectors, in rare cases there may be black spots or bright spots among the picture elements.

**Note:**

* Please purchase a screen.
* A DVI-D cable (order code 28-697), which is available separately, is required for connections with the DVI connector of the personal computer.
* A component cable (order code 28-690), which is available separately, is required to connect a DVD player or other equipment with YCbCr connectors.
* A component cable (order code 28-690), which is available separately, is required to connect high definition (HD) video equipment or other equipment with YPbPr connectors.
• Use this information as a guide to find out about the screen size when the projector is placed at a certain location, or to find out the approximate size of a screen that will be required.
• The projection distance over which focussing is adjustable is 1.20 m (3.9 feet) to 14.17 m (46.50 feet). The projector should be placed within this range.

Screen Size and Projection Distance

</tbody>
</table>

* There is a tolerance of ±5% due to design values.
* This table uses the lens apex and lens center as references and requires that the projector be in a horizontal condition (with front and rear adjusters fully withdrawn).
Connecting Personal Computers and Video Equipment

Connecting this unit with a personal computer permits presentation data to be projected as a large screen display at conferences, lectures, and on other occasions. Furthermore, connecting this unit to a DVD player or other video equipment source in combination with an audio/video amplifier and speaker system will allow you to enjoy convincing home theater.

Connections with Personal Computer

Please check the following before making connections with the personal computer.

- A suitable resolution for the U4-232/U4-232h is 1024 × 768 dots (XGA) and the maximum displayable resolution is 1280 × 1024 dots (S-XGA).
  Make changes to a displayable resolution at the personal computer side. Please check with “Table of Supported Frequency” on Page E-62.
- The setting method for the personal computer will differ depending on the specific model. Please read the personal computer instruction manual or the on-line help information, or contact the manufacturer of your personal computer.
- Projection might not be possible when connection is with a personal computer that is equipped with a DVI-I connector such as some PowerBook G4 computers and others when the signal is converted to analog RGB (which uses a mini D-sub 15-pin connector) and connection is made with the pertinent equipment. In circumstances such as this, please purchase separately a DVI-D cable and use the unit through the DVI connection.
  Note that connections via DVI will enable the projection of a high quality image compared to connections using analog RGB.

Personal Computers with a DVI Connector

- Make the connection with a DVI-D cable and the PC connector of the projector.
  When connecting, arrange the connectors in the proper orientation and plug in. Turn the screw knobs and fasten to the connector of the main unit.
- The projector has been set to “Auto” at the factory; however, if it does not project, please change the input setting to “Digital” using the menu sequence of [Setup] → [Input Format] → [PC].

Note
This projector uses a 29-pin DVI connector that supports the digital interface. Digital signal TMDS (Transition Minimized Differential Signaling) of the DVI (Digital Visual Interface) standard is used.
Connecting Personal Computers and Video Equipment

**Personal Computers with a Mini D-Sub 15-Pin Connector**

- When making connections with the DVI connector of the projector, please make the connection via the supplied DVI/mini D-Sub 15-pin conversion cable.

  The projector has been set to “Auto” at the factory; however, if it does not project, please change the input setting to “RGB” using the menu sequence of [Setup] → [Input Format] → [PC].

---

**Note:**

* Before making connections, check the power of the projector and the equipment to be connected is switched off.

* When projection will be with a notebook computer connected, knowledge will be required for the cable connection and notebook computer startup procedure as well as the operation that follows startup. Please consult the instruction manual of your notebook computer or the on-line help.
Connecting Personal Computers and Video Equipment

To Output the External Output Signal of a Notebook Computer
When projection will be with a notebook computer connected, knowledge will be required for the cable connection and notebook computer startup procedure as well as the operation that follows notebook startup. Please consult the instruction manual of your notebook computer or the on-line help while performing the following procedure.

1. Check whether a signal is being sent from the notebook computer to the projector. An indication appearing on the liquid crystal display of the notebook computer does not necessarily mean that an external output signal is being output.

2. Should a sign not be output from the notebook computer, please try the operation described below. For an IBM PC/AT, DOS/V computer, press the [Fn] key plus any one of the [F1] to [F10] keys. (See the table below.)

Note: Table information is current to December 2003.

Note
When the liquid crystal display of the notebook computer and the projector are displayed at the same time, the projected image might not be correct even though the liquid crystal display shows a correct indication. Should this occur, stop the simultaneous display of the notebook computer and try the mode with external output only. (Try an operation such as that described in aforementioned Step 2 and try closing the liquid crystal panel which might result in external output only.)
Connecting Personal Computers and Video Equipment

Connections with Composite Signals

**Video Equipment with VIDEO Connectors**
- Make the connection to the VIDEO connector of the projector using the supplied Video cable.
- The input setting of the VIDEO connector has been set to “Auto” at the factory; however, if the projector does not project, please change the input setting to “Your Country’s Television Broadcast System” using the menu sequence of [Setup] → [Input Format] → [Video].

**Video Equipment with S-VIDEO Connectors**
- Make the connection to the S-VIDEO connector of the projector using the supplied S-video cable.
- The input setting of the S-VIDEO connector has been set to “Auto” at the factory; however, if the projector does not project, please change the input setting to “Your Country’s Television Broadcast System” using the menu sequence of [Setup] → [Input format] → [S-Video].

Video cable (Supplied item)

Video deck, DVD player, document camera, etc.

S-Video cable (Supplied item)
Connecting Personal Computers and Video Equipment

Connections with Component Signals

When the Video Equipment Has a YCbCr Connector or YPbPr Connector

- The projector has been set to “Auto” at the factory; however, if it does not project, please change the input setting to “Component” using the menu sequence of [Setup] → [Input Format] → [PC].
- This projector automatically distinguishes the YCbCr input signal and the YPbPr input signal and projects it. When projecting the YCbCr signal or YPbPr signal, if the color of the overall image strongly leans toward being greenish or another color, change the setting under the menu of [Color] → [Color Space].
  See “Color Space” on Page E-45.

Projecting component signals

Please note that when inputting 480i or 576i signals using a separately sold component cable and viewing video images, depending on the connected device and the video source being projected, the picture may be disturbed or may not be projected properly.
In such cases, it is possible to achieve a picture with no disturbance that is projected properly by either switching to 480p signals or connecting using an S-Video cable instead.

Note

In some rare cases, the picture may not be displayed, depending on the connected device.
**Connections with Audio Connectors**

* Make the connection to the projector’s AUDIO connector using the supplied audio cable. When the audio jack of the equipment that is to be connected is of the RCA phono type, make connection via the supplied audio conversion adapter.
* The built-in speaker of the projector provides monaural audio. To enjoy convincing audio reproduction, please connect the audio output of the video equipment to your audio system.
* The built-in speaker outputs the audio of the equipment connected to the AUDIO connector.
Power Cable Connections and Switching the Power On/Off

There is an order in which the power cable is connected and the power is switched on/off.

**Operating**

1. **Connect the AC IN connector of the projector and the power outlet using the supplied power cable.**
   - The STANDBY indicator will light in amber, and the unit will enter the standby mode.

2. **Switch on the projector power**
   - **Main unit operation:** Press the STANDBY button.
   - **Remote control operation:** Press the STANDBY button.
   - This indicator is also lit green in Eco-mode.

   The first time the power is switched on after purchase, [Menu Language Select] will be displayed. See Page E-22 for information about language selection.
   - When the power is switched on, the STANDBY indicator changes to blinking green, then lights steadily after about 60 seconds and the projection screen is set to the brightness of normal mode. At this time, if the STATUS indicator is lit in green, [Lamp Mode] is set to “Eco”. See Pages E-28 and E-50 for information about the selection method.
   - If the power does not come on, see “When the STATUS Indicator is Lit or Blinking” on Page E-55.

   If the “Password” input window is displayed: See Page E-33.
   - A password is set for this projector.
   - The projector cannot be used unless the correct password is input.
   - To turn off the power: See Page E-23.

   The projector is now capable of regular projection.

3. **Switch on the power of the connected equipment**

---

**Note:**
- When the power plug will be unplugged from the power outlet, please place the projector near the power outlet so that it may be reached easily.
- Press the STANDBY button after the STANDBY indicator is lit in amber.
- The included power cable is exclusively for use with the U4-232/U4-232h. Never use it with other products.
Power Cable Connections and Switching the Power On/Off

When [Menu Language Select] is Displayed Upon Switching On the Power

The first time the power is switched on after purchase, [Menu Language Select] will be displayed. Follow the procedure described below and select the display language of the projector.

If the image is blurred, turn the focus ring counterclockwise or clockwise to focus it. See Page E-25.

1. Press the SELECT (▲▼) buttons of the projector and align the deep blue cursor with [English].

2. Press the ENTER button to set.
   This will set the language and [Menu Language Select] will close.

Caution:
[Menu Language Select] will not appear the next time the power is switched on.
Should a change of language become necessary, see “Language” on Page E-51.
**Finishing**

1. **Switch off the power of the connected equipment**

2. **Switch off the power of the projector**
   - **Main unit operation:** Press the STANDBY button.
   - **Remote control operation:** Press the STANDBY button.

   ![Remote control and STANDBY button](image)

   The [Power Off] display appears. When the level gauge reaches maximum, the projection screen will go off (in about 5 seconds) and the projector will enter the power-off operation.

   **Note**
   - The operation can be cancelled by pressing a button other than the STANDBY button.
   - One more press of the STANDBY button will switch off the power.

3. **Unplug the power cable**
   - Check that the STANDBY indicator is lit in amber and then unplug the power cable.
   - The STANDBY indicator will go off when the power cable is unplugged.

   ![STANDBY indicator](image)

   **Warning**
   Do not unplug the power cable while the STANDBY indicator is blinking amber. Doing so may shorten the life of the lamp or damage the projector.
Adjustment of the Projection Screen

Switch on the power of the connected equipment and make the adjustments with the video signal being input to the projector.

Adjustment of the Projection Screen

1. **Turn the zoom ring to adjust the screen size of the projection image.**
   Adjust the image to match the desired screen size. When outside of the adjustment range, move the projector to the rear or forward.

2. **Adjust the projection image to the screen.**
   Check that the screen is set level and vertically.
   (1) If the image is shifted to the left or right, move the main unit horizontally. (Align the center of the screen and the center of the projector lens.)
   (2) If the image is shifted vertically, move the image up or down with the adjuster. See “Making Adjustments with the Adjusters” on Page E-25.
   (3) If the image is slanted, adjust by turning the right or left front adjuster. See “Making Adjustments with the Adjusters” on Page E-25.
   (4) A projection image such as that illustrated in the diagram is the result of the projector not being perpendicular to the screen. Set the projector so that it is pointing straight toward the screen.
   (5) If the image shows keystone distortion, adjust using remote control or menu operations. See “Keystone” on Page E-29, 48.
3 Turn the focus ring and adjust the focus of the screen

![Focus ring](image)

Making Adjustments with the Adjusters

Raising the projection image
While viewing the projection image, (1) press and hold the front adjuster buttons located at the left and right and, (2) raise the projector to align the image with the screen, then release your fingers. Turn the left and right front adjusters for fine adjustment. Adjust so that there is no shaking of the projector.

Lowering the projection image
Lower the front adjusters using the operation described above. To lower the projection screen further, raise the rear adjuster. Fine adjustments are made by turning the left and right front adjusters. Make adjustments so that there is no rattling.

**Note:**
When the projector has a suspended or rear installation is used, the orientation of the projection will need to be changed. Please see “Vertical Flip/Horizontal Flip” on Page E-48.
General Operation

This section describes the use of direct operation with the main unit or remote control buttons. For information about using the menu, see "Menu Operation Method" on Page E-35 and the various items on Pages E-42 to E-54.

**Input Selection**

This operation selects the input signal to be projected.

**Main unit operation:** Press the SOURCE button.

(If it will not function while the menu or the quick menu is displayed.)

**When Auto Source is On**

If there is no input signal at the source that was previously used, the projector automatically selects another source that has the next input signal.

**When Auto Source is Off**

Each press of the button switches the selection one step in the sequence of Analog RGB → Component → Digital RGB → VIDEO → S-VIDEO.

**Remote control operation:** Press the desired input selection button.

- RGB button ....... This is used to switch to the PC connector.
- VIDEO button ..... Each press of this button switches the input between Video and S-Video.

**When Auto Source is On**

When an input signal is not present at the selected source, the projector automatically selects the next source that has an input signal.

**When Auto Source is Off**

The projector switches to the selected source regardless of whether an input signal is present.

**Note**

* When you do not operate source selection, the projector will assume the input selection condition that was previously used.
* See "Auto Source" on Page E-49 for information about the Auto Source on and off conditions.
* When the input format has been switched, you may be required to reconnect the input signal.

**Automatic Adjustment of Analog RGB**

This function automatically adjusts the position shift of the analog RGB input signal, the size of the picture, vertical striping, and color infidelity.

Normally, this function is adjusted automatically at the time of signal selection.

**Main unit operation/Remote control operation:** Press the AUTO button. (This will not function while the menu or the quick menu is displayed.)

A press of the AUTO button starts the automatic adjustment.

**Note**

* If the display position is shifted, vertical lines appear on the picture, or the projection is not good even after using automatic adjustment, please perform image adjustment manually. See "Picture Adj. / Fine Picture / H Position / V Position" on Page E-42.
* If the position is off or there are dark vertical bands on the picture, press the AUTO button with the screen as bright as possible (make the screen as bright as possible by for example displaying the trash window over the entire screen). If the problem persists after pressing the AUTO button several times, set manually at the “Picture Adjustment” menu.
* When the image extends beyond the boundaries of the screen or is smaller than the screen, set Aspect to “Auto”. See "Selection of Aspect Ratio" on Page E-27 and "Aspect" on Page E-47.
**Selection of Aspect Ratio**

This function selects horizontal and vertical picture proportions of the input signal.

Press the ASPECT button while viewing the projected image and select the aspect ratio.

**Personal Computer Signal**
Each press of the ASPECT button advances the selection one step in the sequence of Auto → Direct → Real, and then repeats.

Auto ............ Automatically enlarges or reduces the image to project a full screen in a ratio of 4:3
Direct ........... Maintains the aspect ratio and projects a picture of the maximum displayable size
Real ............ Projects the input signal without pixel conversion.

<table>
<thead>
<tr>
<th>Input Signal</th>
<th>Auto</th>
<th>Direct</th>
<th>Real</th>
</tr>
</thead>
<tbody>
<tr>
<td>The setting is higher than the display resolution of the projector.</td>
<td><img src="image1.png" alt="Image" /></td>
<td><img src="image2.png" alt="Image" /></td>
<td><img src="image3.png" alt="Image" /></td>
</tr>
<tr>
<td>The setting is lower than the display resolution of the projector.</td>
<td><img src="image4.png" alt="Image" /></td>
<td><img src="image5.png" alt="Image" /></td>
<td><img src="image6.png" alt="Image" /></td>
</tr>
</tbody>
</table>

**Video Signals / Component Signals**
Each press of the ASPECT button advances the selection one step in the sequence of Auto → Wide → Zoom, and then repeats.

Auto ............ While maintaining the aspect ratio, projects a full screen so that no portions extend beyond the boundaries of the screen. The top and bottom of the 16:9 image becomes black.
Wide ........... Projects to fill the full width with the entire image at 16:9. (This feature is used to project a squeezed image in a proper aspect ratio.)
Zoom ........... Projects only the 4:3 portion within 16:9 image to fill the screen. (Portion that extend off screen is cut.)

<table>
<thead>
<tr>
<th>Aspect ratio selection</th>
<th>Auto</th>
<th>Wide</th>
<th>Zoom</th>
</tr>
</thead>
<tbody>
<tr>
<td>4:3 screen</td>
<td><img src="image7.png" alt="Image" /></td>
<td><img src="image8.png" alt="Image" /></td>
<td><img src="image9.png" alt="Image" /></td>
</tr>
<tr>
<td>16:9 screen</td>
<td><img src="image10.png" alt="Image" /></td>
<td><img src="image11.png" alt="Image" /></td>
<td><img src="image12.png" alt="Image" /></td>
</tr>
</tbody>
</table>

**Note:**
The “Real” setting under “Aspect” for digital RGB signals can only be adjusted when the input signal is of XGA size or smaller.

**Note:**
When selection has been made for the “Real” setting of the personal computer signal (i.e., when the input signal and the projector display resolution are high) and the “Zoom” setting of the video signal, pressing the SELECT (↑↓←→) buttons on the remote control will permit movement of the display position. Note that there will not be any movement when the menu or the quick menu is displayed.
General Operation

**Freezing a Moving Picture**

This function is used to stop and view a moving picture. Note that the input image continues to advance even though the picture there is a still picture condition.

A press of the FREEZE button changes the screen to a still picture. A further press returns the screen to a moving picture.

**Cancelling Video and Audio Temporarily**

This function is used to cancel the video and audio at the same time.

A press of the MUTE button will blank the picture and the sound, and the screen will take on the background color that has been set. Another press will cause a return to the original conditions.

**Lamp Mode**

Use this if the picture is projected on a small screen and the picture is too bright or when projecting images in dark rooms.

Pressing the ECO button will set the lamp mode.

**Eco (STATUS indicator is lit green)**

Lamp brightness is set to 80% and the lamp life is extended.

**Normal (STATUS indicator is off)**

Lamp brightness is set to 100% and the screen is bright.

*Note:*

Frequent switching this mode can degrade the lamp.
**Keystone**

Use this to adjust for trapezoidal (keystone) distortion of the projected image.

**Adjustment Method**

1. Press the ▲ or ▼ KSTN button to make the left and right sides parallel. The keystone adjustment display appears when one of the buttons is pressed.

   ![Keystone Adjustment Display]

2. Press the CANCEL button to immediately close the display. The display will close when there has not been an operation in about 10 seconds.

   **Note:**
   * Keystone adjustment values can be saved. See “Keystone Save” on Page E-48.
   * Screen examples have been drawn in an exaggerated style for the purpose of description.
   * Please note that depending on the projected picture and the projection conditions, it may not be possible to eliminate keystone distortion completely.

---

**Adjustment of the Volume**

This function adjusts the volume of the built-in speaker.

1. Press the ▲ or ▼ VOL button to adjust the volume. The volume adjustment display appears when one of the buttons is pressed.

   ![Volume Adjustment Display]

   The ▲ button increases the volume and the ▼ button decreases the volume.

2. Press the CANCEL button to immediately close the display. The display will close when there has not been an operation in about 10 seconds.

   **Note:**
   * Adjustment of the volume will not produce any sound unless an image is being projected.
General Operation

Enlargement of the Image and Video Movement

This function digitally enlarges the personal computer image and video image.

1) Press the ZOOM button to enlarge the image.
   - The zoom display appears when the ZOOM button is pressed.

   ![Zoom Display]

   When the ▲ button is pressed, the image is enlarged approximately 2 times, and when the ▼ button is pressed the image is reduced (returning to 1:1).
   • The enlargement function cannot be used with digital RGB inputs.

   ![Image Enlargement Examples]

2) Pressing the SELECT (▲▼◄►) buttons on the remote control at the time of the zoom operation will cause the display position to move.
   - (There will not be any movement when zoom is at 0.)

   ![Movement Examples]

3) Press the CANCEL button to immediately close the display.
   - The display will close when there has not been an operation in about 10 seconds.

   ![Display Close]

   **Note:**
   - After magnifying the image, be sure to use the ZOOM button to bring the gauge value back to “0”.

The image can also be moved in the following circumstances.
- When “Aspect” is set to “Real” by the signal of the Analog RGB, and the input resolution is higher than the display resolution of the projector.
- When “Aspect” is set to “Zoom” by the video signal.

**Note:**
- * Zoom and image movement functions are cancelled when the input is switched.
- * Movement of the screen will not be possible when the menu screen is being displayed.
General Operation

Using the Presentation Timer

The presentation is given while checking the timer displayed on the screen. The gauge display allows the remaining time to be known at a glance.

(1) Press the TIMER button to show the settings display.
   The display will close when an operation has not been made for about 10 seconds.

   [Timer settings display]
   Press the CANCEL button to close the display immediately.

(2) Use the ▼ and ▶ SELECT buttons to set the time.
   The setting contents are “Off” and from 10 to 60 minutes (in 10-minute intervals)
   Settings can also be made with the SELECT (◄ ►) buttons.

   Presentation Timer ▼ 10 min. ▶

(3) Press the ENTER button and start the timer.
   • The display of the timer setting will close, the display of the timer will appear and simultaneously the timer will start.

   [Timer Display]
   The blue gauge indicates the remaining time. When the gauge disappears, the time is up.
   The gauge continues to be displayed when the timer is stopped.

   [Timer Display]
   When the remaining time is “0” (Gray)

   • Press the ENTER button to restart the timer. The timer will start with the same time setting.
   • Press the CANCEL button to close the timer display. The timer setting will return to “Off”.

Moving the Position of the Timer Display
The SELECT (▲ ▼ ◄ ►) buttons on the remote control permit movement within the movable range of the timer display.

Note:
* The timer display will be closed while the menu or the quick menu is displayed, and while a message is displayed; however, the timer will still be operating at such times. Also, the timer will not be displayed unless a signal is being input.
* While the presentation timer is being displayed, screen movement will not be possible in the zoom mode.
Protecting the Projector with the Security Lock

A password can be registered and the security lock set in order to protect the projector from unauthorized use.

Registering the password
The password is registered using the menus. For instructions on operating the menus, see “Menu Operation Method” on E-35.

(1) Select “Security Lock” in the “Option” menu and set it to “Enable”.
   The menu closes and the password registration display appears.

(2) Use the number buttons (1 to 4) to register the password.
   Be sure to input a 4-digit number.
   Example: Registering the password “2441”
   (1) Press number button “2”, An “*” (asterisk) appears at the first place.
   Next press number buttons “4”, “4” and “1” in that order. Asterisks appear in all four places.

   (2) Input the password again. An “*” appears when the input number matches. If there is a mistake, the asterisks turn off. Start over from step (1) above.
   If the password matches, the password registration display closes.

Note:
To cancel the number you have input, press the CANCEL button.
The asterisks disappear and the display returns to the input standby mode at the first place.
To cancel the password registration mode, press the CANCEL button again. The “Password” display turns off.

This completes password registration.
The “Password” input display appears the next time the power is turned on.

Note:
The numbers you have input are not displayed. Be sure to write down the password and store it in a safe place.
General Operation

If the password input display appears when the power is turned on
When a password has been registered, the “Password” input window appears on the projected image when the power is turned on. The projector continues projecting this image until the correct password is input. At this time, only the STANDBY button (power off) works. Use the procedure described below to input the registered password. For instructions on registering the password, see E-32.

Input the password using the number buttons (1 to 4).
Be sure to input the registered 4-digit number.

Example: To input the password “2441”
Press number button “2”. An “*” (asterisk) appears at the first place.

Next press number buttons “4”, “4” and “1” in that order. Asterisks appear in all four places.
If the password matches, the window turns off and the projector can be used normally.

Canceling the password/Changing the password
The password is canceled and changed using the menus. For instructions on operating the menus, see “Menu Operation Method” on E-35.

Canceling the password
Select “Security Lock” in the “Option” menu and set it to “Disable”.
This clears the password and disables the security lock.
The password input display no longer appears when the power is turned on.

Changing the password
After setting “Security Lock” to “Disable” as described above, set it back to “Enable”. The menu closes and the password registration display appears.
Register the new password. See “Registering the password” on E-32.
Using the Quick Menu

This function permits frequently used adjustments to be performed quickly.
Note that the Quick Menu will not be displayed unless the signal of the connected equipment is input. Please select the input that you wish to adjust.

Main unit operation
(1) Press the QUICK MENU button to display the quick adjustment display.
   Further presses cause the adjustment display to change in sequence.
   Press the SELECT ▲ or ▼ button to switch to the desired adjustment display.
(2) Press the SELECT ◄ or ► button to adjust.

Remote control operation
(1) A press of the QUICK MENU button brings up the quick adjustment display.
   Further presses cause the adjustment display to change in sequence.
   The adjustment display can be selected with use of either the SELECT ▲ or ▼ button.
(2) Press the cursor ◄ or ► button to make the adjustment.
(3) To close the display immediately, press the CANCEL button.
   In the absence of operations for a period of about 10 seconds, the display will close automatically.

Content of Adjustments and Settings

Example: Brightness adjustment display

<table>
<thead>
<tr>
<th>Display Item</th>
<th>Adjustment/Setting</th>
</tr>
</thead>
<tbody>
<tr>
<td>Brightness</td>
<td></td>
</tr>
</tbody>
</table>

Brightness Adjusts the brightness of the image. See page E-42.
Contrast Adjusts the contrast of the image. See page E-42.
Keystone Corrects (vertical) keystone distortion of the screen. See page E-29, 48.
Volume This function adjusts the volume of the built-in speaker. See page E-29.
Presentation timer Sets the time of the presentation timer. See page E-31.
Quick Color Adj. Select the preset color mode. See page E-44.
Menu Operation Method

• This section describes only the menu operation method. Please see this item should you need information while performing menu operations.
• For information about a menu function, adjustment, or setting, please see one of the pages containing such descriptions.
• Adjustments and settings are made by projecting an image and adjusting to an optimum condition.
• The remote control should be pointed toward the remote control sensor of the projector and operated.
• To return the various items that have been changed via the menu to their standard values (i.e., default values at time of shipping from the factory), see “Factory Default” on Page E-53. (Some items will not return to their initial values.)
• The adjustment/setting items and contents will differ depending on the input selection and the adjustment/setting items that can be used with the input signal are displayed on the menu.

Names and Functions of Buttons Used for Menu Operations

(Remote Control)

- **MENU button**
  Used for menu display and menu closure.

- **SELECT (▲▼◄►) buttons**
  Used in the selection of menu names and item names as well as in setting and adjusting the item contents.

- **ENTER button**
  Used to enter settings.

- **CANCEL button**
  Used to return to menu name selection as well as to close the menu (and the sub menu display).

(Main Unit)

- **SELECT (▲▼◄►) buttons**

- **ENTER button**
  Used to display menus, to return to menu name selections, and to close menus (i.e., closing sub menu displays).
Menu Operation Method

Menu Screen Names and Functions

**Menu Name**
This is the title of the menu. There is a change to the title screen when the menu is selected. The cursor moves to the selected menu name.

**Item Name**
This is the name of the adjustment or setting.

**Adjustment Bar and Settings Contents**
Adjustment Bar: The increases and decreases in bar length express the adjustment condition. Setting Contents: Displays the contents that have been set.

**Cursor (Deep Blue)**
This permits setting/adjustment of the item located at the cursor position.

**Icon:** Pressing the ENTER button displays the sub menu or setting contents.
Menu Operation Method

Performing Menu Operations

- Only “Setup”, “Options” and “Info.” can be selected when no signal is being input.
- The menu display will close if, after pressing a button, the next button operation is not made within 30 seconds.
- The adjustment and the setting values are stored even when the power is switched off or the plug is disconnected from the power outlet.
  (Note that some items are not stored.)

Preparation

Switch on the power of the connected equipment, start the play operation or another operation, and input the signal to the projector.
Select the input that you wish to adjust.
The menu display of the description diagram depicts an example in which the “Keystone” item name is selected.

Menu Display

1 Press the MENU button to display the menu

![Menu Display]

The menu name that existed when the menu was closed previously will be displayed.

Selection of the Menu Name

2 Press the SELECT (PushButton) button to select the menu name

![Selection of the Menu Name]

The cursor moves to the selected menu name.

Note:
Please check that the cursor of the item name has disappeared at the time of menu name selection.
Press the CANCEL button to make the cursor disappear.
Menu Operation Method

Displaying the Cursor

3 Press the ▼ SELECT button to display the item name selection cursor.

Selection of the Item Name

4 Press the SELECT (▲▼) button to align the cursor with the item name

Items for which the icon is Displayed
Press the ENTER button to display the submenu.
Press the SELECT (▲▼) button and align the cursor with the desired item name.
There are also some items for which the setting display or the verification display will appear. Please see the various item descriptions.

Making Adjustments/Settings

5 Press the SELECT (◄►) button and make the adjustment (or setting) while viewing the image
When a button is pressed, the image will also change.

Adjustment display: Each press of the button results in a change of 1 point and continued presses cause changes to proceed in order.
Setting display: The setting contents display changes with each press of the button.
**Closing the Menu**

**6** Press the MENU button and close the menu display.

![Remote Control Illustration]

**Selecting Another Menu Name with Remote Control Operation**

When a sub menu is displayed, press the CANCEL button and close the sub menu. Press the CANCEL button again to turn off the item name cursor.

![Remote Control Illustration]

Press the SELECT (→) button and select the menu name. (Menu names cannot be selected when the item name cursor is displayed.)

![Remote Control Illustration]

**Note:**
A press of the QUICK button while the menu is displayed will close the menu and display the quick menu. A press of the MENU button while the quick menu is displayed will close the quick menu and display the menu.
List of Item Names Offering Input Selection and Adjustments/Settings

The item names that can be adjusted/set will differ depending on the input signal.

* “Tint” can be adjusted only at the time of NTSC composite/S signal input.
* The color space can only be adjusted with high definition TVs.
* The “Real” setting under “Aspect” for digital RGB signals can only be adjusted when the input signal is of XGA size or smaller.

• Perform this operation while projecting the picture for which the adjustment/setting will be made.
• Select the menu name “Image”.

See “Menu Operation Method” on Page E-35 for information about performing menu operations. The item name display will differ depending on the input signal. See “List of Item Names Offering Input Selection and Adjustments/Settings” on Page E-40.

**Brightness / Contrast / Color / Tint / Sharpness**

Picture qualities such as brightness and contrast will change depending on the whether the room is bright or dark. Please adjust to suit your preference.

Select the desired item name and then adjust with the SELECT (◄►) buttons.

<table>
<thead>
<tr>
<th>Item Name</th>

<td>Sharper image</td>
</tr>
</tbody>
</table>

**Note:**
* The adjustment values of the adjustable items are stored according to input source.
* “Tint” can only be adjusted when inputting NTSC composite/S-Video signals or component signals.

**Picture Adj. / Fine Picture / H Position / V Position**

Usually, automatic adjustment is performed at the time of signal selection, but when automatic adjustment is not effective, these adjustments can be performed.

**Note:**
When the image extends beyond the boundaries of the screen or is smaller than the screen, check that the “View” → “Aspect” setting is set to “Auto”. See “Aspect” on Page E-47.

**Picture Adj. (Picture Adjustment)**

Adjust this when bright and dark vertical bands appear on the screen.

Select the “Picture Adj.” item name and adjust with the SELECT (◄►) buttons so that the vertical bands disappear and brightness becomes uniform across the screen.
Fine Picture
Adjust this when the picture shows a lack of color fidelity or flickering.
Select the “Fine Picture” item name and adjust with the SELECT (▶) buttons so that the lack of color fidelity or the flickering disappears.

H Position
Adjust this when the picture is shifted to the left or right.
Select the “H Position” item name and adjust with the SELECT (▶) buttons.

V Position
Adjust this when the picture is shifted up or down.
Select the “V Position” item name and adjust with the SELECT (▶) buttons.

Reset
This function resets (i.e., returns to the standard settings) the adjustment/setting value of the “Image” menu name.
A press of the ENTER button forces the reset.

Note:
* The item name “Fine Picture” at the time of RGB input will not be reset.
* “Reset” of the menu name “Image” can be reset for each input source.
* To reset the adjustments/settings of all the menu items (while noting that there are some items that cannot be reset), see “Factory Default” on Page E-53.
Do the following operation while displaying the image you want to adjust or set.

Select the menu name “Color”.

See “Menu Operation Method” on Page E-35 for information about performing menu operations. The item name display will differ depending on the input signal. See “List of Item Names Offering Input Selection and Adjustments/Settings” on Page E-40.

Quick Color Adj.

Select the preset color mode.

Select the “Quick Color Adj.” item name and select the setting contents with the SELECT (▲▼) buttons.

[U4-232]
Color ........... Select this to prioritize color.
Standard ...... Select this to prioritize brightness.

* When “Color” or “Standard” is selected, the “Gamma”, “Color Temp.” and “White” adjustment items are displayed in gray and cannot be selected or adjusted.

Custom ........ “Gamma”, “Color Temp.” and “White” adjustment items can be selected and adjusted

* The selected values for the different adjustment items are stored in the memory so the desired color adjustments can be set.

[U4-232h]
Picture ........ Select this to prioritize color.
Standard ...... This is the standard selection. (Default setting)
Dynamic ...... Select this for prioritizing brightness.

* When “Picture”, “Standard” or “Dynamic” is selected, the “Gamma”, “Color Temp.” and “White” adjustment items are displayed in gray and cannot be selected or adjusted.

Custom ........ “Gamma”, “Color Temp.” and “White” adjustment items can be selected and adjusted

* The selected values for the different adjustment items are stored in the memory so the desired color adjustments can be set.

Gamma

Gamma corrects the proportion of change of the dark portions from the bright portions of the input signal.
Set this to reproduce natural color tone or to distinctly project a personal computer picture in a bright conference room.

Select the “Gamma” item name and select the setting contents with the SELECT (▲▼) buttons.

Normal ........ Correction with standard settings
Natural ........ Corrects for natural color tones
Real ........... Corrects with emphasis on brightness

Note:
[U4-232]
When “Color” or “Standard” is selected for “Quick Color Adj.”, the “Gamma” adjustment item is displayed in gray and cannot be selected or adjusted.

[U4-232h]
When “Picture”, “Standard” or “Dynamic” is selected for “Quick Color Adj.”, the “Gamma” adjustment item is displayed in gray and cannot be selected or adjusted.
**Color Temp.**

The screen color is affected by the color of the illumination and other extraneous light. This function adjusts the white, which is the reference color for video equipment, and improves the quality of color reproduction. Adjustment can also be used to enhance skin colors.

Select the item name “Color Temp.” and select the setting contents with the SELECT (▶) buttons.

- **Low** .......... Produces warm whites (reddish)
- **Medium** ...... Produces warm whites (yellowish)
- **Normal** ...... Produces the white of sunlight
- **High** .......... Produces cool whites (bluish)

**Note:**

[U4-232] When “Color” or “Standard” is selected for “Quick Color Adj.”, the “Color Temp.” adjustment item is displayed in gray and cannot be selected or adjusted. See “Quick Color Adj.” on E-44.

[U4-232h] When “Picture”, “Standard” or “Dynamic” is selected for “Quick Color Adj.”, the “Color Temp.” adjustment item is displayed in gray and cannot be selected or adjusted. See “Quick Color Adj.” on E-44.

---

**White**

When projecting, this function is used to emphasize the whites of text or diagrams on the personal computer.

Select the item name “White” and use the SELECT (▶) buttons to select the setting contents.

Select the desired degree of white from among “Low”, “Medium”, and “High”.

**Note:**

[U4-232] When “Color” or “Standard” is selected for “Quick Color Adj.”, the “White” adjustment item is displayed in gray and cannot be selected or adjusted. See “Quick Color Adj.” on E-44.

[U4-232h] When “Picture”, “Standard” or “Dynamic” is selected for “Quick Color Adj.”, the “White” adjustment item is displayed in gray and cannot be selected or adjusted. See “Quick Color Adj.” on E-44.

---

**Color Space**

Set this function when a component signal (YPbPr) is projected and the image is extremely red or extremely green.

Select the item name “Color Space” and use the SELECT (▶) buttons to select a color space setting that provides a normal image.

**Selection contents at the time of YPbPr input**

BT.709, SMPTE240

**Note:**

* When the component signal undergoes conversion processing to red, green, and blue which express the image of the projector, the correct color cannot be reproduced unless a system compliant with the color difference conversion system of the input signal is used. Color Space serves to make this selection.
* The color space can only be adjusted with high definition TVs.
Color

**White Balance**

This function automatically adjusts the black level and the white level of the analog RGB input signal to suit the personal computer.

1. Select the item name [White Balance] and press the ENTER button. The display will change to [Input Black Signal].

2. The screen background color of the connected personal computer will be set to black.

3. Press the ENTER button. The display will change to [Adjusting Black] and the black level will be adjusted.

4. The adjustment of the black level is completed and the display changes to [Input White Signal].

5. The screen background color of the connected personal computer will be set to white.

6. Press the ENTER button. The display will change to [Adjusting White] and the white level will be adjusted.

[White balance complete] is displayed for a while and the adjustment is completed.
Perform this operation while projecting the picture for which the adjustment/setting will be made.

Select the menu name “View”.

See “Menu Operation Method” on Page E-35 for information about performing menu operations. The item name display will differ depending on the input signal. See “List of Item Names Offering Input Selection and Adjustments/Settings” on Page E-40.

**Aspect**

This function sets the horizontal and vertical picture proportions of the input signal.

Select the item name “Aspect” and select the setting contents with the SELECT (↕) buttons.

**Personal Computer Signal**

- **Auto** ............ Automatically enlarges or reduces the image to project a full screen in a ratio of 4:3
- **Direct** .......... Maintains the aspect ratio and projects a picture of the maximum displayable size
- **Real** ............ Projects the input signal without pixel conversion

**Video Signals**

- **Auto** ............ While maintaining the aspect ratio, projects a full screen so that no portions extend beyond the boundaries of the screen. The top and bottom of the 16:9 image becomes black.
- **Wide** .......... Projects to fill the full width with the entire image at 16:9. (This feature is used to project a squeezed image in a proper aspect ratio.)
- **Zoom** .......... Projects only the 4:3 portion within 16:9 image to fill the screen. (Portion that extend off screen is cut.)

See “Selection of Aspect Ratio” on Page E-27 for diagrams of projection screen images that correspond to the input signals.

---

**Note:**
The “Real” setting under “Aspect” for digital RGB signals can only be adjusted when the input signal is of XGA size or smaller.

**Note:**
Please note that using this monitor for the purpose of commercial gain or the attraction of public attention in a venue such as a coffee shop or hotel and projecting a 4:3 screen in wide mode or leaving a squeezed screen as a compressed image raises concern about the infringement of the copyright holder’s rights which are protected by copyright law.

---

**Filter**

This function sets the sharpness when the input signal is adjusted to the resolution of the projector and enlarged or reduced.

Select the item name “Filter” and select the setting contents with the SELECT (↕) buttons.

Smaller numerical values result in a sharper picture and larger values result in a softer picture. Please select your desired setting value.
**Vertical Flip/Horizontal Flip**

In selecting the method of projecting to the screen, these functions are set when the projector is in a rear screen installation.

Select the item name “Vertical Flip” or “Horizontal Flip” and select the setting contents with the SELECT (ʼʼ) buttons.

---

**Keystone**

Keystone distortion will occur when the projector and screen are on an angle (in the vertical orientation). This function is used to correct this distortion.

Select the item name “Keystone” and correct the keystone distortion using the SELECT (ʼʼ) buttons.

---

**Keystone Save**

This function is used to save the keystone adjustment values. Setting Keystone Save to on will set the previous keystone adjustment values when projecting after the power cable has been disconnected and then reconnected.

Select the item name “Keystone Save” and set with the SELECT (ʼʼ) buttons.

---

**Note:**
* The menus and other on-screen displays cannot be adjusted.
* Please note that depending on the projected picture and the projection conditions, it may not be possible to eliminate keystone distortion completely.

---

**Note:**
Regardless of whether Keystone Save is set to “On” or “Off”, when projection is from the standby condition, the picture is projected using the previous keystone adjustment values.
• Select menu name “Setup”.
   See “Menu Operation Method” on Page E-35 for information about performing menu operations. The item name display will differ depending on the input signal. See “List of Item Names Offering Input Selection and Adjustments/Settings” on Page E-40.

### Auto Source

The Auto Source function automatically detects the input signal when the power supply is switched on and when the input is switched.

Select the item name “Auto Source” and select the setting contents with the SELECT (↑↓) buttons.

- On ............... Switches on the automatic detection function
- Off .............. Switches off the automatic detection function

#### Signal Detection Order When On

The sequence of Analog RGB → Component → Digital RGB → VIDEO → S-VIDEO is searched repeatedly. When a signal is detected, the search is stopped and the image is projected.

### Auto Power Off

This function switches off the projector power automatically when the input of the projector enters a no-signal condition.

Select item name “Auto Power Off” and select the setting contents with the SELECT (↑↓) buttons.

- On ............... The power is switched off when there is no signal.
- Off .............. The power is not switch off even when there is no signal.

#### Operation when Function is On

- The “No Signal Power Off” display appears when a no-signal condition continues for approximately 10 seconds. The power is switched off about 5 minutes after this.
- If a signal is input during the appearance of the display and an operation button other than the STANDBY button is pressed, the display is closed and the function is cancelled.

**Note:**

Some video decks and other equipment output a blue background or other video when playback ends. When this happens, a signal is being input to the projector and Auto Power Off is not activated.

### Menu Position

This function sets the display position of the menu.

Select item name “Menu Position” and select the setting contents with the SELECT (↑↓) buttons.

- ............... Displays on the left side
- ............... Displays on the right side
**Lamp Mode**

Use this if the picture is projected on a small screen and the picture is too bright or when projecting images in dark rooms.

Select the item name “Lamp Mode” and select the setting contents with the SELECT (◄►) buttons.

Eco ............. The lamp brightness is set to 80% and the lamp life is extended. (STATUS indicator is green)
Normal ........ The lamp brightness is set to 100% and the screen is bright. (STATUS indicator is off)

*Note:*
Frequent switching this mode can degrade the lamp.

**Input Format**

This function is used in setting the input signals of the input connectors. Normally, this should be set to Auto. When identification is not possible with Auto, make the setting.

Select the item name “Input Format”, press the ENTER button, and the sub menu will open.
Select the connector that is to be changed, and select the setting contents with the SELECT (◄►) buttons.

**[PC]**

- Auto ............ Automatically identifies the signal.
- RGB ............ Analog RGB signal is set.
- Digital ........ Digital RGB signal is set.
- Component . Component signal is set.

**[Video] and [S-Video]**

“Video” and “S-Video” are the color format settings for the VIDEO connector.

- Auto ............ Automatic identification.
- NTSC .......... Fixed to the NTSC system.
- NTSC 4.43 .. Fixed to the NTSC 4.43 system.
- PAL ............ Fixed to the PAL system.
- PAL M ......... Fixed to the PAL M system.
- PAL N ......... Fixed to the PAL N system.
- PAL 60 ......... Fixed to the PAL 60 system.
- SECAM ....... Fixed to the SECAM system.

*Note:*
* When the input format has been switched, you may be required to reconnect the input signal.
* The picture may be disturbed when the input format is switched or when the mode is set back to auto. This is not a malfunction. The picture will return to normal when the input is switched, etc.

**Presentation Timer**

The presentation is given while checking the timer displayed on the screen.
The gauge display allows the remaining time to be known at a glance.

Select the item name “Presentation Timer” and select the setting contents with the SELECT (◄►) buttons.

**Setting contents:** Off, 10 min., 20 min., 30 min., 40 min., 50 min., 60 min.

To start the timer...
Press the MENU button and open the menu.
The timer display will appear at the lower right and the timer will start.
See “Using the Presentation Timer” on Page E-31 for details.
• Select menu name “Option”.  
See “Menu Operation Method” on Page E-35 for information about performing menu operations. The item name display will differ depending on the input signal. See “List of Item Names Offering Input Selection and Adjustments/Settings” on Page E-40.

### Language

This function sets the language that is displayed on screen in the messages and menu displays.

Select item name “Language” and press the ENTER button to open the Language sub menu. Select the language with the SELECT (▲▼) buttons.

<table>
<thead>
<tr>
<th>Language</th>
<th></th>
<th>English</th>

<td></td>
<td>日本語</td>
</tr>
</tbody>
</table>

### On Screen

This function switches on/off the messages displayed with a black frame such as the input signal information and the aspect ratio.

Select item name “On Screen” and select the setting contents with the SELECT (◄►) buttons.

On ............... The message is displayed.  
Off ............... The message is not displayed.

**Note:**  
Even when set to off, messages that are not in a black frame will be displayed.

### Background

This function sets the screen color when the input source is no-signal.

Select item name “Background” and select the setting contents with the SELECT (◄►) buttons.

Blue ............ Sets a blue screen when there is no signal  
Black ........... Sets a black screen when there is no signal
**Option**

### Startup Screen

This is the selection of whether or not to display the logo screen at startup time.

Select item name “Startup Screen” and select the setting contents with the SELECT (◣◤) buttons.

Logo .......... Displays the logo.
Blank .......... Does not display the logo.

**Note:**

When “Logo” is selected at the startup screen, the “PLUS” logo is displayed.

### Security Lock

A password can be registered and the security lock set in order to prevent unauthorized use of the projector.

For instructions on using the security function, see “Protecting the Projector with the Security Lock” on E-32.

Select item name “Security Lock” and select the setting contents with the SELECT (◣◤) buttons.

Disable ....... The security lock is disabled.
Enable ......... The security lock is enabled.

The projector can be operated without inputting the password.
The security lock is activated when the power is turned on, and the password must be input in order to operate the projector.
• Select menu name “Info.”
  See “Menu Operation Method” on Page E-35 for information about performing menu operations. The item name display will differ depending on the input signal. See “List of Item Names Offering Input Selection and Adjustments/Settings” on Page E-40.

**Status**

This displays information about the equipment.

Select item name “Status” and press the ENTER button.
There is a change to the status display.
Press the CANCEL button to return to the menu.

**Display Contents:**
Projector model, firmware version, and the internet home page address of PLUS Vision Corp.

<table>
<thead>
<tr>
<th>Status</th>

</table>

**Factory Default**

This function returns the adjustments and settings of all the input sources to the standard factory default values.

Select item name “Factory Default” and press the ENTER button.
There is a change to the display [Press “ENTER” to Factory Default Set].

Press the ENTER button to initialize.
To cancel, press the CANCEL button and there will be a return to the menu.

**Items that are not set to the factory default:**
Vertical Flip/Horizontal Flip, Language and Lamp Timer and Security.

<table>

</table>

**Lamp Timer Reset**

This function resets the lamp timer. Be sure to perform the reset operation when the lamp cartridge has been replaced.

Select item name “Lamp Timer Reset” and press the ENTER button.

There is a change to the display “Press “ENTER” to Lamp Timer Reset”.

Press the ENTER button to initialize.
To cancel, press the CANCEL button and there will be a return to the menu.

**Lamp Timer**

This displays the lamp timer.

This projector has an Eco mode function. The lamp life will differ between Normal mode and Eco mode.

**Lamp Life**

- Use only in Normal mode: approx.1500 hours
- Use only in Eco mode: approx.2000 hours

* Lamp life will differ when there has been switching between the modes.

- **When Lamp Life Has Been Reached**
  "Replace the Lamp Cartridge" is displayed on the screen for 10 seconds in a 1-minute interval.
  Please replace the lamp with a new one.
  See "Replacing the Lamp Cartridge" on Page E-58 for information about lamp cartridge replacement.

- **When Over 100 Hours Have Elapsed Since Reaching Lamp Life (Including Eco Mode)**
  [Warning!! System Shutdown] is displayed for 10 seconds and the power is switched off. Pressing the STANDBY button under this condition will not switch on the power. Please replace the lamp cartridge.
When an Indicator is Lit or Blinking

The indicators on the projector’s control panel lit or blink to notify of problems, as described below. An indicator is also used to notify you of the currently set power mode (under normal circumstances). See “Power Cable Connections and Switching the Power On/Off” on page E-21.

<table>
<thead>
<tr>
<th>Indicator status</th>
<th>What you should do</th>
</tr>
</thead>
</table>
| **When the power is on** (Lit green)  
Standby (Lit amber)  
Lit red | It is time to replace the lamp.  
Replace with a new lamp cartridge.  |
| Blinks amber for 60 seconds, then lit amber  
Lit red | The lamp has reached the end of its service life. The power will no longer turn on.  
The projector can be used for 100 hours after the lamp has reached the end of its service life.  
Replace with a new lamp cartridge.  |
| Lit red  
Blinks red  
(lit for 1 seconds/off for 1 seconds) | The lamp cover is open.  
The lamp cover is not properly mounted. Mount it properly.  |
| Lit red  
Blinks red  
(lit for 0.5 seconds/off for 0.5 seconds) | The temperature is abnormally high.  
• The temperature protector has been activated. If the room temperature is high, move the projector to a cool place. If the projector’s internal temperature is high, check the cooling fan’s ventilation slots and clean them if they are clogged.  
• When the temperature protector is activated, the power turns off and in some cases will not turn back on immediately. In this case wait about 90 seconds, then try again.  |
| Lit amber  
Blinks red  
(lit for 0.5 seconds/off for 0.5 seconds) | The fan has stopped.  
Unplug the power cable and contact a store that sells the U4-232/U4-232h for repairs.  |
| **When the lamp has burned out during use**  
Blinks amber for 90 seconds, then lit amber  
When the lamp does not come on from the start  
Lit amber  
Blinks red  
(lit for 1 seconds/off for 1 seconds) | The lamp will not light.  
Wait at least 90 seconds, then turn the power back on. If the problem persists, unplug the power cord and contact a store that sells the U4-232/U4-232h for repairs.  |

Should an indicator be in a condition other than normal or flash at a rate other than the aforementioned, disconnect the power cable and contact your store of purchase.

**Thermal Protector**

When the temperature inside the projector becomes abnormally high, the STATUS indicator blinks red (0.5 seconds on/0.5 seconds off), the STANDBY indicator is a steady red, and at the same time the temperature protector operates and switches off the power of the projector. Should this happen, please take the following actions.

1. **Switch off the power and disconnect the power plug from the wall outlet.**

2. **Check the following matters and take the required measures.**
   - When the projector is being used in a location that has a high ambient temperature, set it up again in a cool location. Check the outflow and intake holes and clean them if they are obstructed.

3. **Wait about 60 minutes until the temperature of the projector drops.**
   - If after having performed the above matters, the problem still has not been solved, please contact your store of purchase.
**Troubleshooting**

Check the following matters before requesting servicing.

</table>
Cleaning

• Be certain to disconnect the power plug from the power outlet before cleaning.
• Do not spray or otherwise expose the projector, lens, or screen to volatile substances such as insecticides. Do not leave rubber or vinyl products in contact with the projector for long periods. Doing so could cause them to undergo qualitative changes or the coatings may peel, etc.

Cleaning a Soiled Projector Main Unit
• Wipe with a lint-free, soft, dry cloth.
  When very dirty, wipe with a cloth that has been moistened with a diluted neutral detergent, then finish with a dry cloth. If a chemically-treated cloth is going to be used, please follow any written warnings.
• Do not wipe with thinner, benzene, or other solvents. Doing so could cause them to undergo qualitative changes or the coatings may peel, etc.
• When removing the dust of the outflow and intake holes, use the brush attachment on a vacuum cleaner to clean out the dust. Avoid using the vacuum directly without attaching the adapter as well as the use of a nozzle adapter.
• Do not scratch or otherwise hit the projector body with your nails or other hard object, since this will cause scratches.

Dirty Lens
• Clean using the same method you would use to clean a camera lens: Use a commercial blower for camera use or cleaning paper for eye glasses. Be careful not to scratch the lens at this time.

Dust of the Intake and Outflow Holes
Dust that collects in the intake and outflow holes will obstruct the ventilation and cause the internal temperature to rise which could cause damage. Clean this area carefully. As a guideline, clean at least every 100 hours of usage.

• Switch off the power, check that the STANDBY indicator has changed to a steadily lit amber, then unplug the power cable.
• Clean out the holes from the outside using a vacuum cleaner. Use the brush adapter of the vacuum cleaner to do this. Avoid using the vacuum directly without attaching the adapter as well as the use of a nozzle adapter.

Cleaning the Inside of the Projector
Cleaning of the inside of the projector is required about once a year. Failure to clean over a long period while dust has collected inside the projector could cause a fire or breakdown. Do not clean the inside of the projector by yourself. Please be sure to contact your dealer.
Replacing the Lamp Cartridge

- The lamp that is used as a light source in the projector has a limited service life. The rated service life of the lamp is about 1500 hours (when used in normal mode only). This could be shortened depending on conditions of use and other factors.
  
  Note that lamp life will be extended when the projector is often used in Eco mode. (The rated service life of the lamp means the average value of lamp life for lamps that have been manufactured over a long period, and it is derived from test conditions at this company.)

- When the life of the lamp is exceeded, the STATUS indicator lights a steady red and the message [Replace the Lamp Cartridge] is displayed on the screen. When this occurs, it is time to replace the lamp cartridge. Please make the replacement following the procedure below.

- If the projector is used another 100 hours after the lamp’s service life is reached, the power is set to the standby mode and no longer turns on.

- Contact a store that sells the U4-232/U4-232h for a replacement lamp. Indicate you need a U4-150 replacement lamp for the U4-232/U4-232h (order code 28-061).

⚠️ CAUTION

- Replacement of the lamp cartridge is performed after switching off the power, waiting for the cooling fan to stop, disconnecting the power plug from the power outlet, and then leaving the projector for about 60 minutes before replacement is started. Replacement of the lamp cartridge during operation or immediately after operation stops will cause burns because of the high temperature.

- Do not remove any screws other than those specified.

- Do not touch the lamp with bare hands. Doing so could shorten the life of the lamp.

- If lamp has reached the end of its usable life, the lamp bulb may shatter. When this happens, an explosive sound can be heard and pieces of glass may be scattered in the lamp cartridge. Do not touch them as the pieces of glass may cause injury. If this happens, contact your dealer or the store the projector was purchased.
Replacing the Lamp Cartridge

Preparations: Turning the projector upside-down on top of a soft cloth, etc., so that it does not get scratched makes it easier to replace the lamp cartridge. Turn the projector right-side up after replacing the lamp cartridge.

1 Unplug the power cord.

2 Turn the projector upside-down.

3 Remove the lamp cover.
   (1) Turn the lamp cover’s set screw counterclockwise and loosen until the screw turns freely. (The screw does not come off.)
   (2) Open the lamp cover a little, then pull it in the direction of the arrow and remove it.

4 Remove the lamp cartridge.
   (1) Turn the lamp cartridge’s two set screws counterclockwise and loosen them until the screws turn freely. (The screws do not come off.)
   (2) Grasp the lamp cartridge’s handle and pull upward to remove the lamp cartridge.
Replacing the Lamp Cartridge

5 Mount the new lamp cartridge.

(1) Place the lamp cartridge with its socket facing to the right and push it in slowly.
   (Line it up with the screw holes in the projector.)
   (2) Turn the two lamp cartridge screws clockwise to tighten them.

6 Mount the lamp cover.

(1) Set the tip of the lamp cover in place, then close the lamp cover.
   (2) Turn the lamp cover’s screw clockwise to tighten it.

7 Reset the Lamp Timer.

Connect the power cable, switch on the power, and then reset.
Select [Info.] → [Lamp Timer Reset] on the menu and press the ENTER button. There is a change to the initialization verification display. Press the ENTER button again. See “Lamp Timer Reset” on Page E-53.

Note:
After reaching the lamp service life, if the lamp is used for more than another 100 hours, it will not be possible to switch on the power. Should this happen, while the projector is in the standby mode, simultaneously holding down the projector’s SOURCE button and AUTO button for more than 5 seconds will clear the lamp timer. Checking that the STATUS indicator is out will show that the lamp timer has been cleared.
Contact a store that sells the U4-232/U4-232h for a replacement lamp. Indicate you need a U4-150 replacement lamp for the U4-232/U4-232h (order code 28-061).

### Mechanical

| Dimensions Excluding Stand    | 190 mm (W) × 53 mm (H) × 242 mm (D) |
|                              | 7.5 in.(W) × 2.1 in.(H) × 9.5 in.(D) |
| Weight                       | Approximately 1.5 kg / 3.3 lbs |
| Operational Temperatures     | Data projector: 5°C to 35°C (41°F to 95°F), 30 to 85% humidity |

* Specifications and design are subject to change without notice.*
The projector automatically identifies the signal input from the computer and selects the optimum resolution as shown on the table below. Manual adjustments may be required for some input signals. See “Picture Adj. / Fine Picture / H Position / V Position” on page E-42, 43.
