Important safety instructions

Your projector is designed and tested to meet the latest standards for safety of information technology equipment. However, to ensure safe use of this product, it is important that you follow the instructions mentioned in this manual and marked on the product.

### Safety Instructions

1. Please read this manual before you operate your projector. Save it for future reference.

2. Do not look straight at the projector lens during operation. The intense light beam may damage your eyes.

3. Refer servicing to qualified service personnel.

4. Always open the lens shutter (if any) or remove the lens cap (if any) when the projector light source is on.

5. In some countries, the line voltage is NOT stable. This projector is designed to operate safely within a mains voltage between 100 to 240 volts AC, but could fail if power cuts or surges of ±10 volts occur. In areas where the mains voltage may fluctuate or cut out, it is recommended that you connect your projector through a power stabilizer, surge protector or uninterruptible power supply (UPS).

6. Do not block the projection lens with any objects when the projector is under operation as this could cause the objects to become heated and deformed or even cause a fire. To temporarily turn off the light source, press ECO BLANK on the projector or remote control.
7. Do not operate light sources beyond the rated light source life. Excessive operation of light sources beyond the rated life could cause them to fail on rare occasions.

8. Do not place this product on an unstable cart, stand, or table. The product may fall, sustaining serious damage.

9. Do not attempt to disassemble this projector. There are dangerous high voltages inside which may cause death if you should come into contact with live parts. Under no circumstances should you ever undo or remove any cover. Refer servicing only to suitably qualified professional service personnel.

10. When the projector is under operation, you may sense some heated air and odor from its ventilation grill. It is a normal phenomenon and not a product defect.

11. Do not place this projector in any of the following environments.
- Space that is poorly ventilated or confined. Allow at least 50 cm clearance from walls and free flow of air around the projector.
- Locations where temperatures may become excessively high, such as the inside of a car with all windows rolled up.
- Locations where excessive humidity, dust, or cigarette smoke may contaminate optical components, shorten the projector's life span and darken the image.
- Locations near fire alarms
- Locations with an ambient temperature above 40°C / 104°F
- Locations where the altitudes are higher than 3000 m (10000 feet).
Safety Instructions (Continued)

12. Do not block the ventilation holes.
- Do not place this projector on a blanket, bedding or any other soft surface.
- Do not cover this projector with a cloth or any other item.
- Do not place inflammables near the projector.

If the ventilation holes are seriously obstructed, overheating inside the projector may result in a fire.

13. Always place the projector on a level, horizontal surface during operation.
- Do not use if tilted at an angle of more than 10 degrees left to right, nor at angle of more than 15 degrees front to back. Using the projector when it is not fully horizontal may cause a malfunction of, or damage to, the light source.

14. Do not stand the projector on end vertically. Doing so may cause the projector to fall over, causing injury or resulting in damage to the projector.

15. Do not step on the projector or place any objects upon it. Besides probable physical damage to the projector, doing so may result in accidents and possible injury.

16. Do not place liquids near or on the projector. Liquids spilled into the projector may cause it to fail. If the projector does become wet, disconnect it from the power supply's power outlet and call BenQ to have the projector serviced.

17. This product is capable of displaying inverted images for ceiling mount installation.
Use only BenQ's Ceiling Mount Kit for mounting the projector and ensure it is securely installed.

18. This apparatus must be earthed.
Safety Instructions (Continued)

⚠️ Ceiling mounting the projector

We want you to have a pleasant experience using your BenQ projector, so we need to bring this safety matter to your attention to prevent possible damage to person and property.

If you intend to mount your projector on the ceiling, we strongly recommend that you use a proper fitting BenQ projector ceiling mount kit and that you ensure it is securely and safely installed.

If you use a non-BenQ brand projector ceiling mount kit, there is a safety risk that the projector may fall from the ceiling due to an improper attachment through the use of the wrong gauge or length screws.

You can purchase a BenQ projector ceiling mount kit from the place you purchased your BenQ projector. BenQ recommends that you also purchase a separate Kensington lock compatible security cable and attach it securely to both the Kensington lock slot on the projector and the base of the ceiling mount bracket. This will perform the secondary role of restraining the projector should its attachment to the mounting bracket become loose.
Introduction

Projector features

The projector integrates high-performance optical engine projection and a user-friendly design to deliver high reliability and ease of use.

The projector offers the following features.

- **ECO BLANK** - With technology, the Eco Blank function will save up to 90% of your light source power at the same time your image is hiding
- **Network Settings** allowing management of projector status from a computer using a web browser
- **Microphone jack** to output the sound through the projector speaker
- **USB MINI-B** jack to display computer signal through a USB cable
- **USB TYPE-A** jack to present images stored on a USB flash drive
- **3D function** to enjoy the 3D movies, videos, and sporting events in a more realistic way by presenting the depth of the images
- **Filter free design** to lower maintenance and operating costs
- **Auto keystone function** to correct image keystoning automatically
- **Brilliant color / VIDI** to provide truer, more vibrant colors in picture
- **Closed captioning** to display the dialogue, narration, and sound effects of TV programs and videos
- **Variable audio output**
- **Wall color correction** allowing projection on surfaces of several predefined colors
- **Quick auto search** speeding up the signal detecting process
- **Selectable password protected function**
- **3D color management** allowing color adjustments to your liking
- **Presentation timer** for better control of time during presentations
- **One-key auto-adjustment** to display the best picture quality
- **Digital keystone correction** to correct distorted images
- **Adjustable color balance control** for data/video display
- **Ability to display 1.07 billion colors**
- **Multi-language On-Screen Display (OSD) menus**
- **Switchable normal and economic modes** to reduce the power consumption
- **Built-in speakers providing** mixed mono audio when an audio input is connected
- **Component HDTV compatibility** (YPbPr)

The apparent brightness of the projected image will vary depending on the ambient lighting conditions, selected input signal contrast/brightness settings, and is directly proportional to projection distance.

The light source brightness will decline over time and may vary within the light source manufacturers specifications. This is normal and expected behavior.
Shipping contents

Carefully unpack and verify that you have all of the items shown below. If any of these items are missing, please contact your place of purchase.

Standard accessories

*The supplied accessories will be suitable for your region, and may differ from those illustrated.
*The warranty card is only supplied in some specific regions. Please consult your dealer for detailed information.

Optional accessories

1. Wall mount kit
2. RS232 cable
3. Soft carry bag
Projector exterior view

1. External control panel
   (See "Controls and functions" on page 10 for details.)
2. Vent (cool air intake)
3. Lens cover
4. Focus ring
5. Vent (heated air exhaust)
6. Front IR remote sensor
7. Projection lens
8. AC power jack
9. 12V DC output terminal
   Used to trigger external devices such as an electric screen or light control, etc. Consult your dealer for how to connect these devices.
10. RJ45 LAN input jack
11. USB Mini-B port
12. RS232 control port
13. USB Type-A ports
14. HDMI input port
15. RGB signal output jack
16. RGB (PC)/Component Video (YPbPr/YCbCr) signal input jack
17. S-Video input jack
18. Audio (L/R) input jacks
19. Audio input jacks
   Audio output jack
   Microphone jack
20. Rear IR remote sensor
21. Kensington anti-theft lock slot
22. Ceiling mount holes
Controls and functions

Projector

1. **Focus ring**
   Adjusts the focus of the projected image.

2. **TEMPerature warning light**
   Lights up red if the projector’s temperature becomes too high.

3. **LIGHT indicator light**
   Indicates the status of the light source. Lights up or flashes when the light source has developed a problem.

4. **MENU/EXIT**
   Turns on the On-Screen Display (OSD) menu. Goes back to previous OSD menu, exits and saves menu settings.

5. **Keystone/Arrow keys ( ▼ / ▲ Up, ◄ / ▼ Down)**
   Manually corrects distorted images resulting from an angled projection.

6. **Left/ ▼ ▼**
   Decreases the projector volume.

7. **MODE/ENTER**
   Selects an available picture setup mode. Activates the selected On-Screen Display (OSD) menu item.

8. **ECO BLANK**
   Used to hide the screen picture.

9. **POWER indicator light**
   Lights up or flashes when the projector is under operation.

10. **AUTO**
    Automatically determines the best picture timings for the displayed image.

11. **Right/ ▲ ▲**
    Increases the projector volume. When the On-Screen Display (OSD) menu is activated, the #6, #5, and #11 keys are used as directional arrows to select the desired menu items and to make adjustments.

12. **POWER**
    Toggles the projector between standby mode and on.

13. **SOURCE**
    Displays the source selection bar.
Remote control

1. **ON/OFF**
   Toggles the projector between standby mode and on.

2. **Source selection buttons**
   (COMPUTER-1, COMPUTER-2, VIDEO, S-VIDEO)
   Selects an input source for display.

3. **MENU/EXIT**
   Turns on the On-Screen Display (OSD) menu. Goes back to previous OSD menu, exits and saves menu settings.

4. **ECO BLANK**
   Used to hide the screen image.

5. **Left**
   Decreases the projected image brightness.

6. **MODE/ENTER**
   Selects an available picture setup mode.
   Activates the selected On-Screen Display (OSD) menu item.

7. **LASER**
   Emits visible laser pointer light for presentation purposes.

8. **PAGE UP/PAGE DOWN**
   Operates your display software program (on a connected PC) which responds to page up/down commands (like Microsoft PowerPoint).

9. **FREEZE**
   Freezes the projected image.

10. **NETWORK SETTING**
    Enters network setting directly.

11. **TEST**
    Displays the test pattern.

12. **SMART ECO**
    Displays the light source mode selection bar.

13. **NETWORK**
    Searches the network signal and project it within a few seconds once available.

14. **SOURCE**
    Displays the source selection bar.

15. **AUTO**
    Automatically determines the best picture timings for the displayed image.

16. **Keystone/Arrow buttons ( ▲/▲ Up, ◄/▼ Down)**
    Manually corrects distorted images resulting from an angled projection.

17. **Right**
    Increases the projected image brightness.
    When the On-Screen Display (OSD) menu is activated, the #5, #16 and #17 buttons are used as directional arrows to select the desired menu items and to make adjustments.
18. **ZOOM+/ZOOM-**
   Magnifies or reduces the projected image size.

19. **VOLUME+/VOLUME-**
   Adjusts the sound level.

20. **MUTE**
   Toggles projector audio between on and off.

21. **ASPECT**
   Selects the display aspect ratio.

22. **MIC/VOL +/−**
   Adjusts the microphone sound level.

23. **CAPTURE**
   Captures the projected picture and save it as your startup screen.

24. **Numeric buttons**
   Enters numbers in network settings.
   Numeric buttons 1, 2, 3, 4 cannot be pressed when asked to enter password.

**Operating the LASER pointer**

The Laser Pointer is a presentation aid for professionals. It emits red colored light when you press it.

The laser beam is visible. It is necessary to press and hold **LASER** for continuous output.

⚠️ Do not look into the laser light window or shine the laser light beam on yourself or others. See the warning messages on the back of the remote control prior to using it.

The laser pointer is not a toy. Parents should be mindful of the dangers of laser energy and keep this remote control out of the reach of children.
Remote control effective range

Infra-Red (IR) remote control sensors are located on the front and the rear of the projector. The remote control must be held at an angle within 30 degrees perpendicular to the projector’s IR remote control sensors to function correctly. The distance between the remote control and the sensors should not exceed 8 meters (~26 feet).

Make sure that there are no obstacles between the remote control and the IR sensors on the projector that might obstruct the infra-red beam.

- **Operating the projector from the front**
- **Operating the projector from the rear**

Replacing the remote control batteries

1. To open the battery cover, turn the remote control over to view its back, push on the finger grip on the cover and slide it up in the direction of the arrow as illustrated. The cover will slide off.
2. Remove any existing batteries (if necessary) and install two AAA batteries observing the battery polarities as indicated in the base of the battery compartment. Positive (+) goes to positive and negative (-) goes to negative.
3. Refit the cover by aligning it with the base and sliding it back down into position. Stop when it clicks into place.

- Avoid leaving the remote control and batteries in an excessive heat or humid environment like the kitchen, bathroom, sauna, sunroom or in a closed car.
- Replace only with the same or equivalent type recommended by the battery manufacturer.
- Dispose of the used batteries according to the manufacturer’s instructions and local environment regulations for your region.
- Never throw the batteries into a fire. There may be danger of an explosion.
- If the batteries are dead or if you will not be using the remote control for an extended period of time, remove the batteries to avoid damage to the remote control from possible battery leakage.
Positioning your projector

Choosing a location

Your projector is designed to be installed in one of four possible installation locations:

1. **Front Table**
   Select this location with the projector placed on the table in front of the screen. This is the most common way to position the projector for quick setup and portability.

2. **Front Ceiling**
   Select this location with the projector suspended upside-down from the ceiling in front of the screen.

   Purchase the BenQ Projector Ceiling Mount Kit from your dealer to mount your projector on the ceiling.

   Set **Front Ceiling** in the SYSTEM SETUP: Basic > Projector Position menu after you turn the projector on.

3. **Rear Ceiling**
   Select this location with the projector suspended upside-down from the ceiling behind the screen.

   Note that a special rear projection screen and the BenQ Projector Ceiling Mount Kit are required for this installation location.

   Set **Rear Ceiling** in the SYSTEM SETUP: Basic > Projector Position menu after you turn the projector on.

4. **Rear Table**
   Select this location with the projector placed on the table behind the screen.

   Note that a special rear projection screen is required.

   Set **Rear Table** in the SYSTEM SETUP: Basic > Projector Position menu after you turn the projector on.

Your room layout or personal preference will dictate which installation location you select. Take into consideration the size and position of your screen, the location of a suitable power outlet, as well as the location and distance between the projector and the rest of your equipment.
Obtaining a preferred projected image size

The distance from the projector lens to the screen, the zoom setting, and the video format each factors in the projected image size.

Projection dimensions

Refer to "Dimensions" on page 54 for the center of lens dimensions of this projector before calculating the appropriate position.

LX60ST

<table>
<thead>
<tr>

</tr>
<tr>
<td>300 Inch</td>
<td>7620 6096 4572</td>
<td>3704 686</td>
</tr>
</tbody>
</table>

For example, if you are using a 120-inch screen, the recommended projection distance is 1481 mm and the vertical offset is 274 mm.

If your measured projection distance is 2.0 m (2000 mm), the closest match in the "Distance from screen (mm)" column is 1852 mm. Looking across this row shows that a 150" (about 3.8 m) screen is required.
For example, if you are using a 120-inch screen, the recommended projection distance is 1263 mm and the vertical offset is 81 mm.

If your measured projection distance is 1.5 m (1500 mm), the closest match in the "Distance from screen (mm)" column is 1579 mm. Looking across this row shows that a 150” (about 3.8 m) screen is required.

All measurements are approximate and may vary from the actual sizes.

BenQ recommends that if you intend to permanently install the projector, you should physically test the projection size and distance using the actual projector in situ before you permanently install it, so as to make allowance for this projector’s optical characteristics. This will help you determine the exact mounting position so that it best suits your installation location.

<table>

</tr>
</tbody>
</table>

For example, if you are using a 120-inch screen, the recommended projection distance is 1263 mm and the vertical offset is 81 mm.
Connection

When connecting a signal source to the projector, be sure to:

1. Turn all equipment off before making any connections.
2. Use the correct signal cables for each source.
3. Ensure the cables are firmly inserted.

* In the connections shown below, some cables may not be included with the projector (see "Shipping contents" on page 8). They are commercially available from electronics stores.

* The connection illustrations below are for reference only. The rear connecting jacks available on the projector vary with each projector model.

1. VGA cable
2. VGA to DVI-A cable
3. USB cable
4. Component Video to VGA (D-Sub) adapter cable
5. S-Video cable
6. Video cable
7. Audio L/R cable
8. Audio cable
9. Microphone
10. USB flash drive/USB wireless dongle
11. HDMI cable
Many notebooks do not turn on their external video ports when connected to a projector. Usually a key combo like FN + F3 or CRT/LCD key turns the external display on/off. Locate a function key labeled CRT/LCD or a function key with a monitor symbol on the notebook. Press FN and the labeled function key simultaneously. Refer to your notebook’s documentation to find your notebook’s key combination.

- The D-Sub output only works when an appropriate D-Sub input is made to the COMPUTER 1 jack.
- If you wish to use this connection method when the projector is in standby mode, make sure the Monitor Out function is turned on in the SYSTEM SETUP: Advanced menu. See “Standby Settings” on page 46 for details.

Connecting video source devices

You need only connect the projector to a video source device using just one of the connecting methods, however each provides a different level of video quality. The method you choose will most likely depend upon the availability of matching terminals on both the projector and the video source device as described below:

<table>
<thead>
<tr>
<th>Terminal name</th>
<th>Terminal appearance</th>
<th>Picture quality</th>
</tr>
</thead>
<tbody>
<tr>

</tr>
<tr>
<td>S-Video</td>
<td>![S-Video icon]</td>
<td>Good</td>
</tr>
<tr>
<td>Video</td>
<td>![Video icon]</td>
<td>Normal</td>
</tr>
</tbody>
</table>

Connecting audio

The projector has two built-in mono speakers which are designed to provide basic audio functionality accompanying data presentations for business purposes only. They are not designed for, nor intended for stereo audio reproduction use as might be expected in home theater or home cinema applications. Any stereo audio input (if provided), is mixed into a common mono audio output through the projector speakers.

The built-in speakers will be muted when the AUDIO OUT jack is connected.

- In the unlikely event that you connect the projector to a DVD player via the projector’s HDMI input and the projected picture displays wrong colors, please change the color space to YUV. See “Changing Color Space” on page 27 for details.
- The projector is only capable of playing mixed mono audio, even if a stereo audio input is connected. See “Connecting audio” on page 18 for details.
- If the selected video image is not displayed after the projector is turned on and the correct video source has been selected, check that the video source device is turned on and operating correctly. Also check that the signal cables have been connected correctly.

Playing sound through the projector

You can make use of the projector (mixed mono) speaker in your presentations, and also connect separate amplified speakers to the AUDIO OUT socket of the projector.

If you have a separate sound system, you will most likely want to connect the audio output of your Video source device to that sound system, instead of to the mono audio projector.

You can also use a microphone to output the sound through the projector speaker.
Once connected, the audio can be controlled by the projector On-Screen Display (OSD) menus. See "Audio Settings" on page 45 for details.

The table below describes the connection methods for different devices, and where the sound is from.

<table>
<thead>
<tr>
<th>Device</th>
<th>Audio input port</th>
<th>Video/S-Video</th>
<th>Microphone</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>AUDIO IN 1/AUDIO IN 2</td>
<td>AUDIO (L/R)</td>
<td>MIC</td>
</tr>
<tr>
<td>The projector can play the sound from...</td>
<td>AUDIO IN 1/AUDIO IN 2/MIC</td>
<td>AUDIO (L/R)/MIC</td>
<td></td>
</tr>
<tr>
<td>Audio output port</td>
<td>AUDIO OUT</td>
<td>AUDIO OUT</td>
<td>AUDIO OUT</td>
</tr>
</tbody>
</table>

The selected input signal determines which sound will be played by the projector speaker, and which sound will be output from the projector when AUDIO OUT is connected. If you select the COMPUTER 1/YPbPr 1 signal, the projector can play the sound received from AUDIO IN 1/MIC. If you select the COMPUTER 2/YPbPr 2 signal, the projector can play the sound received from AUDIO IN 2/MIC.

The projector can play sound if the connected RJ45 cable or USB cable carries audio signal. There is no need to connect the audio cable when the USB Display or Network Display source is selected.

About the microphone input
- If you wish to use a microphone, connect a 3.5 mini jack cable microphone to the projector.
- You can use a wireless microphone as long as a wireless module is attached to the projector’s microphone input jack and it works well with the associated devices. To ensure a quality use of the wireless microphone, it is recommended that your microphone conforms to the specifications listed in the table below.

<table>
<thead>
<tr>
<th>Signal</th>
<th>Parameter</th>
<th>Min</th>

<td>1K ohm</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Frequency response</td>
<td>600</td>
<td>16k Hz</td>
<td></td>
</tr>
</tbody>
</table>

- There are two ways to adjust microphone volumes.
  - Directly set microphone volume levels in the SYSTEM SETUP: Advanced > Audio Settings > Microphone Volume menu.
  - Press MIC/VOL keys (+/-) on the remote control.

- To make the microphone input available when the projector is in standby mode, turn on the SYSTEM SETUP: Advanced > Standby Settings > Microphone menu.
- If the microphone is not working, check the volume setting and cable connection.
- You might get feedback noise from the microphone when you are too close to the speaker of the projector. Move the microphone away from the speaker of the projector. The greater volume you require, the greater distance you need to be away from the speaker to prevent the noise.
Operation

Starting up the projector

1. Plug the power cord into the projector and into a power outlet. Turn on the power outlet switch (where fitted). Check that the POWER indicator light on the projector lights orange after power has been applied.

⚠️ Please use the original accessories (e.g. power cord) only with the device to avoid possible dangers such as electric shock and fire.

2. Press \( \text{POWER} \) or \( \text{ON} \) to start the projector. As soon as the light source lights up, a "Power On Tone" will be heard. The POWER indicator light flashes green and stays green when the projector is on.

(If necessary) Rotate the focus ring to adjust the image clearness.

To turn off the ring tone, see "Turning off the Power On/Off Ring Tone" on page 36 for details.

3. If the projector is activated for the first time, select your OSD language following the on-screen instructions.

4. If you are prompted for a password, press the arrow keys to enter a six-digit password. See "Utilizing the password function" on page 24 for details.

5. Switch all of the connected equipment on.

6. The projector will start to search for input signals. The current input signal being scanned displays in the upper left corner of the screen. If the projector doesn’t detect a valid signal, the message "No Signal" will continue displaying until an input signal is found.

You can also press SOURCE on the projector or remote control to select your desired input signal. See "Switching input signal" on page 27 for details.

⚠️ If the frequency/resolution of the input signal exceeds the projector’s operating range, you will see the message "Out of Range" displayed on a blank screen. Please change to an input signal which is compatible with the projector’s resolution or set the input signal to a lower setting. See "Timing chart" on page 57 for details.
Adjusting the projected image

Adjusting the projection angle

The projector is equipped with 2 adjuster feet. These adjusters change the image height and projection angle. To adjust the projector:

- Screw the adjuster feet to fine-tune the horizontal angle.
- To retract the feet, screw the adjuster feet in a reverse direction.
- If the projector is not placed on a flat surface or the screen and the projector are not perpendicular to each other, the projected image becomes trapezoidal. To correct this situation, see "Correcting keystone" on page 22 for details.

Auto-adjusting the image

In some cases, you may need to optimize the picture quality. To do this, press AUTO on the projector or remote control. Within 3 seconds, the built-in Intelligent Auto Adjustment function will re-adjust the values of Frequency and Clock to provide the best picture quality.

The current source information will be displayed in the corner of the screen for 3 seconds.

* This function is only available when PC signal (analog RGB) is selected.

Fine-tuning the image clarity

Sharpen the image by rotating the focus ring.

Do not look into the lens while the light source is on. The strong light from the light source may cause damage to your eyes.

Be careful when you press the quick-release button as it is close to the exhaust vent where hot air comes from.
Correcting keystone

Keystoning refers to the situation where the projected image is noticeably wider at either the top or bottom. It occurs when the projector is not perpendicular to the screen.

To correct this, besides adjusting the height of the projector, if you want the projector to automatically correct image keystoning, be sure the Auto Keystone function in the DISPLAY menu is On.

Or you will need to manually correct it following ONE of these steps.

- Using the remote control
  Press ▲ / ▼ on the projector or remote control to display the Keystone correction page. Press ▲ to correct keystoning at the top of the image. Press ▼ to correct keystoning at the bottom of the image.

- Using the OSD menu
  1. Press MENU/EXIT and then press ◄ / ► until the DISPLAY menu is highlighted.
  2. Press ▼ to highlight Keystone and press MODE/ENTER. The Keystone correction page is displayed.
  3. Press ▲ to correct keystoning at the top of the image. Press ▼ to correct keystoning at the bottom of the image.
Using the menus

The projector is equipped with On-Screen Display (OSD) menus for making various adjustments and settings.

Below is the overview of the OSD menu.

1. Press \textit{MENU/EXIT} on the projector or remote control to turn the OSD menu on.

2. Use \textit{\textarrowleft/\textarrowright} to highlight the \textbf{SYSTEM SETUP: Basic} menu.

3. Press \textit{\textarrowdown} to highlight \textbf{Language} and press \textit{\textarrowleft/\textarrowright} to select a preferred language.

4. Press \textit{MENU/EXIT} twice* on the projector or remote control to leave and save the settings.

*The first press leads you back to the main menu and the second press closes the OSD menu.

The following example describes how to set the OSD language.

1. Press \textit{MENU/EXIT} on the projector or remote control to turn the OSD menu on.
2. Use \textit{\textarrowleft/\textarrowright} to highlight the \textbf{SYSTEM SETUP: Basic} menu.
3. Press \textit{\textarrowdown} to highlight \textbf{Language} and press \textit{\textarrowleft/\textarrowright} to select a preferred language.
4. Press \textit{MENU/EXIT} twice* on the projector or remote control to leave and save the settings.

*The first press leads you back to the main menu and the second press closes the OSD menu.
Securing the projector

Using a security cable lock
The projector has to be installed in a safe place to prevent theft. Otherwise, purchase a lock, such as the Kensington lock, to secure the projector. You can locate a Kensington lock slot on the projector.

A Kensington security cable lock is usually a combination of key(s) and the lock. Refer to the lock's documentation for finding out how to use it.

Utilizing the password function
For security purposes and to help prevent unauthorized use, the projector includes an option for setting up password security. The password can be set through the On-Screen Display (OSD) menu.

⚠️ WARNING: You will be inconvenienced if you activate the password functionality and subsequently forget the password. Print out this manual (if necessary) and write the password you used in this manual, and keep the manual in a safe place for later recall.

Setting a password
Once a password has been set and the power on lock is activated, the projector cannot be used unless the correct password is entered every time the projector is started.

1. Open the OSD menu and go to the SYSTEM SETUP: Advanced > Security Settings menu. Press MODE/ENTER. The Security Settings page is displayed.
2. Highlight Change Security Settings and press MODE/ENTER.
3. As pictured to the right, the four arrow keys (▲, ▼, ◀, ◁) respectively represent 4 digits (1, 2, 3, 4). According to the password you desire to set, press the arrow keys to enter six digits for the password.
4. Confirm the new password by re-entering the new password.
   Once the password is set, the OSD menu returns to the Security Settings page.
5. To activate the Power On Lock function, press ▲/▼ to highlight Power On Lock and press ◀/▶ to select On.
6. To activate the Splash Screen Lock function, press ▲/▼ to highlight Splash Screen Lock and press ◀/▶ to select On.
   When the Splash Screen Lock is activated, the MyScreen function in the SYSTEM SETUP: Basic menu will be password-protected.
⚠️ IMPORTANT: The digits being input will be displayed as asterisks on-screen. Write your selected password down here in this manual in advance or right after the password is entered so that it is available to you should you ever forget it.
Password: __ __ __ __ __
Keep this manual in a safe place.
7. To leave the OSD menu, press MENU/EXIT.
If you forget the password

If the password function is activated, you will be asked to enter the six-digit password every time you turn on the projector. If you enter the wrong password, the password error message as pictured to the right is displayed lasting for 3 seconds, and the INPUT PASSWORD message follows. You can retry by entering another six-digit password, or if you did not record the password in this manual, and you absolutely do not remember it, you can use the password recall procedure. See "Entering the password recall procedure" on page 25 for details.

If you enter an incorrect password 5 times in succession, the projector will automatically shut down in a short time.

Entering the password recall procedure

1. Press and hold AUTO on the projector or remote control for 3 seconds. The projector will display a coded number on the screen.
2. Write down the number and turn off your projector.
3. Seek help from the local BenQ service center to decode the number. You may be required to provide proof of purchase documentation to verify that you are an authorized user of the projector.

Changing the password

1. Open the OSD menu and go to the SYSTEM SETUP: Advanced > Security Settings > Change Password menu.
2. Press MODE/ENTER. The message “INPUT CURRENT PASSWORD” appears.
3. Enter the old password.
   i. If the password is correct, another message “INPUT NEW PASSWORD” is displayed.
   ii. If the password is incorrect, the password error message is displayed lasting for three seconds, and the message “INPUT CURRENT PASSWORD” is displayed for your retry. You can press MENU/EXIT to cancel the change or try another password.
4. Enter a new password.

   IMPORTANT: The digits being input will be displayed as asterisks on-screen. Write your selected password down here in this manual in advance or right after the password is entered so that it is available to you should you ever forget it.

   Password: __ __ __ __ __

   Keep this manual in a safe place.
5. Confirm the new password by re-entering the new password.
6. You have successfully assigned a new password to the projector. Remember to enter the new password next time the projector is started.
7. To leave the OSD menu, press MENU/EXIT.
Disabling the password function

To disable password protection, go back to the SYSTEM SETUP: Advanced > Security Settings > Change Security Settings menu after opening the OSD menu system. Press MODE/ENTER. The message “INPUT PASSWORD” is displayed. Enter the current password.

i. If the password is correct, the OSD menu returns to the Security Settings page.
   Press ▼ to highlight Power On Lock and press ◄/ ► to select Off. You will not have to enter the password next time when turning on the projector.
   Press ▼ to highlight Splash Screen Lock and press ◄/ ► to select Off. The Splash Screen function in the SYSTEM SETUP: Basic menu will be available for your change.

ii. If the password is incorrect, the password error message is displayed lasting for three seconds, and the message “INPUT PASSWORD” is displayed for your retry. You can press MENU/EXIT to cancel the change or try another password.

⚠️ Though the password function is disabled, you need to keep the old password in hand should you ever need to re-activate the password function by entering the old password.
Switching input signal

The projector can be connected to multiple devices at the same time. However, it can only display one full screen at a time. When starting up, the projector automatically searches for the available signals.

Be sure the Quick Auto Search function in the SOURCE menu is On if you want the projector to automatically search for the signals.

To select the source:

1. Press SOURCE on the projector or remote control. A source selection bar is displayed.
2. Press ▲/▼ until your desired signal is selected and press MODE/ENTER.

   If available, you can also select the source by pressing one of the Source buttons on the remote control.

   Once detected, the selected source information will be displayed at the corner of the screen for seconds. If there is multiple equipment connected to the projector, repeat steps 1-2 to search for another signal.

   • The brightness level of the projected image will change accordingly when you switch between different input signals. Data (graphic) “PC” presentations using mostly static images are generally brighter than “Video” using mostly moving images (movies).

   • For best display picture results, you should select and use an input signal which outputs at the projector’s native resolution. Any other resolutions will be scaled by the projector depending upon the “aspect ratio” setting, which may cause some image distortion or loss of picture clarity. See “Selecting the aspect ratio” on page 28 for details.

   • Firewall in the PC must be switched off to allow QPresenter and USB Display to work.

Changing Color Space

In the unlikely event that you connect the projector to a DVD player via the projector’s HDMI input and the projected picture displays wrong colors, please change the color space to YUV.

To do this:

1. Press MENU/EXIT and then press ◄/► until the SOURCE menu is highlighted.
2. Press ▼ to highlight Color Space Conversion and press ◄/► to select a suitable color space.

   * This function is only available when the HDMI-input port is in use.
Magnifying and searching for details

If you need to find the details on the projected picture, magnify the picture. Use the direction arrow keys for navigating the picture.

• Using the remote control
  1. Press ZOOM+/ZOOM- to display the Zoom bar. Press ZOOM+ to magnify the center of the picture. Press the key repeatedly until the picture size is suitable for your need.
  2. Use the directional arrows (▲, ▼, ◀,▶) on the projector or remote control to navigate the picture.
  3. To restore the picture to its original size, press AUTO. You can also press ZOOM-. When the key is pressed again, the picture is further reduced until it is restored to the original size.

• Using the OSD menu
  1. Press MENU/EXIT and then press ◀/▶ until the DISPLAY menu is highlighted.
  2. Press ▼ to highlight Digital Zoom and press MODE/ENTER. The Zoom bar is displayed.
  3. Press ▲ repeatedly to magnify the picture to a desired size.
  4. To navigate the picture, press MODE/ENTER to switch to the panning mode and press the directional arrows (▲, ▼, ◀,▶) on the projector or remote control to navigate the picture.
  5. To reduce size of the picture, press MODE/ENTER to switch back to the zoom in/out function, and press AUTO to restore the picture to its original size. You can also press ▼ repeatedly until it is restored to the original size.

The picture can only be navigated after it is magnified. You can further magnify the picture while searching for details.

Selecting the aspect ratio

The “aspect ratio” is the ratio of the image width to the image height. Most analog TV and some computers are in 4:3 ratio, and digital TV and DVDs are usually in 16:9 ratio.

With the advent of digital signal processing, digital display devices like this projector can dynamically stretch and scale the image output to a different aspect than that of the image input signal.

To change the projected picture ratio (no matter what aspect the source is):

• Using the remote control
  1. Press ASPECT to show the current setting.
  2. Press ASPECT repeatedly to select an aspect ratio to suit the format of the video signal and your display requirements.

• Using the OSD menu
  1. Press MENU/EXIT and then press ◀/▶ until the DISPLAY menu is highlighted.
  2. Press ▼ to highlight Aspect Ratio.
  3. Press ◀/▶ to select an aspect ratio to suit the format of the video signal and your display requirements.
About the aspect ratio

- In the pictures below, the black portions are inactive areas and the white portions are active areas.
- OSD menus can be displayed on those unused black areas.

1. **Auto**: Scales an image proportionally to fit the projector’s native resolution in its horizontal or vertical width. This is suitable for the incoming image which is neither in 4:3 nor 16:9 and you want to make most use of the screen without altering the image’s aspect ratio.

2. **Real**: The image is projected as its original resolution, and resized to fit within the display area. For input signals with lower resolutions, the projected image will display smaller than if resized to full screen. You could adjust the zoom setting or move the projector towards the screen to increase the image size if necessary. You may also need to refocus the projector after making these adjustments.

3. **4:3**: Scales an image so that it is displayed in the center of the screen with a 4:3 aspect ratio. This is most suitable for 4:3 images like some computer monitors, standard definition TV and 4:3 aspect DVD movies, as it displays them without aspect alteration.

4. **16:9**: Scales an image so that it is displayed in the center of the screen with a 16:9 aspect ratio. This is most suitable for images which are already in a 16:9 aspect, like high definition TV, as it displays them without aspect alteration.

5. **16:10**: Scales an image so that it is displayed in the center of the screen with a 16:10 aspect ratio. This is most suitable for images which are already in a 16:10 aspect, as it displays them without aspect alteration.
Optimizing the image

Using Wall Color

In the situation where you are projecting onto a colored surface such as a painted wall which may not be white, the Wall Color feature can help correct the projected picture’s colors to prevent possible color difference between the source and projected pictures.

To use this function, go to the DISPLAY > Wall Color menu and press ▼/▼ to select a color which is closest to the color of the projection surface. There are several precalibrated colors to choose from: Light Yellow, Pink, Light Green, Blue, and Blackboard.

Selecting a picture mode

The projector is preset with several predefined picture modes so that you can choose one to suit your operating environment and input signal picture type.

To select an operation mode that suits your need, you can follow one of the following steps.

• Press MODE/ENTER on the projector or remote control repeatedly until your desired mode is selected.
• Go to the PICTURE > Picture Mode menu and press ▼/▼ to select a desired mode.

1. Dynamic mode: Maximizes the brightness of the projected image. This mode is suitable for environments where extra-high brightness is required, such as using the projector in well lit rooms.
2. Presentation mode: Is designed for presentations. The brightness is emphasized in this mode to match PC and notebook coloring.
3. sRGB mode: Maximizes the purity of RGB colors to provide true-to-life images regardless of brightness setting. It is most suitable for viewing photos taken with an sRGB compatible and properly calibrated camera, and for viewing PC graphic and drawing applications such as AutoCAD.
4. Cinema mode: Is appropriate for playing colorful movies, video clips from digital cameras or DVs through the PC input for best viewing in a blackened (little light) environment.
5. User 1/User 2 mode: Recalls the settings customized based on the current available picture modes. See “Setting the User 1/User 2 mode” on page 30 for details.

Setting the User 1/User 2 mode

There are two user-definable modes if the current available picture modes are not suitable for your need. You can use one of the picture modes (except the User 1/2) as a starting point and customize the settings.

1. Press MENU/EXIT to open the On-Screen Display (OSD) menu.
2. Go to the PICTURE > Picture Mode menu.
3. Press ▼/▼ to select User 1 or User 2.
4. Press ▼ to highlight Reference Mode. This function is only available when User 1 or User 2 mode is selected up in the Picture Mode sub-menu item.
5. Press ▼/▼ to select a picture mode that is closest to your need.
6. Press ▼ to select a menu item to be changed and adjust the value with ◄/►. See "Fine-tuning the image quality in user modes" below for details.
7. When all settings have been done, highlight Save Settings and press MODE/ENTER to store the settings.
8. The confirmation message "Setting Saved" is displayed.

Fine-tuning the image quality in user modes
According to the detected signal type, there are some user-definable functions available when User 1 or User 2 is selected. Based on your needs, you can make adjustments to these functions by highlighting them and pressing ◄/► on the projector or remote control.

Adjusting Brightness
The higher the value, the brighter the image. And the lower the setting, the darker the image. Adjust this control so the black areas of the image appear just as black and that detail in the dark areas is visible.

Adjusting Contrast
The higher the value, the greater the contrast. Use this to set the peak white level after you have previously adjusted the Brightness setting to suit your selected input and viewing environment.

Adjusting Color
Lower setting produces less saturated colors. If the setting is too high, colors on the image will be overpowering, which makes the image unrealistic.

Adjusting Tint
The higher the value, the more reddish the picture becomes. The lower the value, the more greenish the picture becomes.

Adjusting Sharpness
The higher the value, the sharper the picture becomes. The lower the value, the softer the picture becomes.

Adjusting Brilliant Color
This feature utilizes a new color-processing algorithm and system level enhancements to enable higher brightness while providing truer, more vibrant colors in picture. It enables a greater than 50% brightness increase in mid-tone images, which are common in video and natural scenes, so the projector reproduces images in realistic and true colors. If you prefer images with that quality, select On. If you don’t need it, select Off. When Off is selected, the Color Temperature function is not available.

Selecting a color temperature
The options available for color temperature settings vary according to the signal type selected.

*About color temperatures:
There are many different shades that are considered to be "white" for various purposes. One of the common methods of representing white color is known as the "color temperature". A white color with a low color temperature appears to be reddish white. A white color with a high color temperature appears to have more blue in it.

3D Color Management

In most installation situations, color management will not be necessary, such as in classroom, meeting room, or lounge room situations where lights remain on, or where building external windows allow daylight into the room.

Only in permanent installations with controlled lighting levels such as boardrooms, lecture theaters, or home theaters, should color management be considered. Color management provides fine color control adjustment to allow for more accurate color reproduction, should you require it.

Proper color management can only be achieved under controlled and reproducible viewing conditions. You will need to use a colorimeter (color light meter), and provide a set of suitable source images to measure color reproduction. These tools are not provided with the projector, however, your projector supplier should be able to provide you with suitable guidance, or even an experienced professional installer.

The Color Management provides six sets (RGBCMY) of colors to be adjusted. When you select each color, you can independently adjust its range and saturation according to your preference.

If you have purchased a test disc which contains various color test patterns and can be used to test the color presentation on monitors, TVs, projectors, etc, you can project any image from the disc on the screen and enter the 3D Color Management menu to make adjustments.

To adjust the settings:
1. Go to the PICTURE menu and highlight 3D Color Management.
2. Press MODE/ENTER on the projector or remote control and the 3D Color Management page is displayed.
3. Highlight Primary Color and press ◀/▶ to select a color from among Red, Yellow, Green, Cyan, Blue, or Magenta.
4. Press ▼ to highlight Hue and press ◀/▶ to select its range. Increase in the range will include colors consisted of more proportions of its two adjacent colors.
5. Press ▼ to highlight Saturation and adjust its values to your preference by pressing ◀/▶. Every adjustment made will reflect to the image immediately.

For example, if you select Red and set its range at 0, only pure red in the projected picture will be selected. Increasing its range will include red close to yellow and red close to magenta.

For example, if you select Red and set its value at 0, only the saturation of pure red will be affected.
Operation 33

Saturation is the amount of that color in a video picture. Lower settings produce less saturated colors; a setting of “0” removes that color from the image entirely. If the saturation is too high, that color will be overpowering and unrealistic.

6. Press ◄ to highlight Gain and adjust its values to your preference by pressing ◄/►. The contrast level of the primary color you select will be affected. Every adjustment made will reflect to the image immediately.

7. Repeat steps 3 to 6 for other color adjustments.

8. Make sure you have made all of the desired adjustments.

9. Press MENU/EXIT to exit and save the settings.

Setting the presentation timer

Presentation timer can indicate the presentation time on the screen to help you achieve better time management when giving presentations. Follow these steps to utilize this function:

1. Go to the SYSTEM SETUP: Basic > Presentation Timer menu and press MODE/ENTER to display the Presentation Timer page.

2. Highlight Timer Period and decide the time period by pressing ◄/►. The length of time can be set from 1 to 5 minutes in 1-minute increments and 5 to 240 minutes in 5-minute increments.

If the timer is already on, the timer will restart whenever the Timer Period is reset.

3. Press ◄ to highlight Timer Display and choose if you want the timer to show up on the screen by pressing ◄/►.

4. Press ◄ to highlight Timer Position and set the timer position by pressing ◄/►.

5. Press ◄ to highlight Timer Counting Direction and select your desired counting direction by pressing ◄/►.

6. Press ◄ to highlight Sound Reminder and decide if you want to activate sound reminder by pressing ◄/►. If you select On, a double beep sound will be heard at the last 30 seconds of counting down/up, and a triple beep sound will be produced when the timer is up.

7. To activate the presentation timer, press ◄ and press ◄/► to highlight On and press MODE/ENTER.

8. A confirmation message is displayed. Highlight Yes and press MODE/ENTER on the projector or remote control to confirm. You will see the message “Timer is On” displaying on the screen. The timer starts counting when the timer is on.
To cancel the timer, perform the following steps:

1. Go to the SYSTEM SETUP: Basic > Presentation Timer menu and highlight Off. Press MODE/ENTER. A confirmation message is displayed.
2. Highlight Yes and press MODE/ENTER to confirm. You will see the message “Timer is Off” appearing on the screen.

Remote paging operations

Connect the projector to your PC or notebook with a USB cable prior to using the paging function. See “Connection” on page 17 for details.

You can operate your display software program (on a connected PC) which responds to page up/down commands (like Microsoft PowerPoint) by pressing PAGE UP/PAGE DOWN on the remote control.

If remote paging function doesn’t work, check if the USB connection is correctly made and the mouse driver on your computer is updated to the latest version.

The remote paging function cannot work with Microsoft® Windows®98 operating system. Windows®XP or higher operating systems are recommended.

Freezing the image

Press FREEZE on the remote control to freeze the image. The word “FREEZE” will be displayed in the upper left corner of the screen. To release the function, press any key on the projector or remote control.

If your remote control has the following keys, please note that they cannot be pressed to release the function: LASER, F1, F4, PAGE UP/PAGE DOWN.

Even if an image is frozen on the screen, the pictures are running on the video or other device. If the connected devices have active audio output, you will still hear the audio even though the image is frozen onscreen.

Hiding the image

In order to draw the audience's full attention to the presenter, you can use ECO BLANK on the projector or remote control to hide the screen image. The word “ECO BLANK” appears in the corner of the screen while the image is hidden. When this function is activated with an audio input connected, the audio can still be heard.

You can set the blank time in the SYSTEM SETUP: Basic > Operation Settings > Eco Blank Timer menu to let the projector return the image automatically after a period of time when there is no action taken on the blank screen. The length of time can be set from 5 to 30 minutes in 5-minute increments.

If the preset time spans are not suitable for your presentation, select Disable.

No matter Eco Blank Timer is activated or not, you can press most of the keys on the projector or remote control to restore the picture.

Do not block the projection lens from projecting as this could cause the blocking object to become heated and deformed or even cause a fire.
Locking control keys

With the control keys on the projector locked, you can prevent your projector settings from being changed accidentally (by children, for example). When the Panel Key Lock is on, no control keys on the projector will operate except POWER.

1. Go to the SYSTEM SETUP: Basic > Panel Key Lock menu, and select On by pressing / on the projector or remote control. A confirmation message is displayed.
2. Highlight Yes and press MODE/ENTER to confirm.

To release panel key lock, use the remote control to enter the SYSTEM SETUP: Basic > Panel Key Lock menu and press / select Off.

• Keys on the remote control are still active when panel key lock is enabled.
• If you press POWER to turn off the projector without disabling panel key lock, the projector will still be in locked status the next time it is turned on.

Operating in a high altitude environment

We recommend you use the High Altitude Mode when your environment is between 1500 m – 3000 m above sea level, and ambient temperature is between 0°C–35°C.

Do not use the High Altitude Mode if your altitude is between 0 m and 1500 m and ambient temperature is between 0°C and 35°C. The projector will be over cooled, if you turn the mode on under such a condition.

To activate the High Altitude Mode:

1. Press MENU/EXIT and then press / until the SYSTEM SETUP: Advanced menu is highlighted.
2. Press ▼ to highlight High Altitude Mode and press / select On. A confirmation message is displayed.
3. Highlight Yes and press MODE/ENTER.

Operation under “High Altitude Mode” may cause a higher decibel operating noise level because of increased fan speed necessary to improve overall system cooling and performance.

If you use this projector under other extreme conditions excluding the above, it may display auto shut-down symptoms, which is designed to protect your projector from overheating. In cases like this, you should switch to High Altitude mode to solve these symptoms. However, this is not to state that this projector can operate under any and all harsh or extreme conditions.

Creating your own startup screen

In addition to selecting the projector preset startup screen from among BenQ logo, Black or Blue screen, you can make your own startup screen that is a picture projected from your computer or video source.

To create your own startup screen, project the picture you want to use as your startup screen from either a computer or video source. The rest steps are as follows.

• Using the remote control
1. Press CAPTURE on the remote control.
2. A confirmation message is displayed. Press CAPTURE or MODE/ENTER again.
3. The message 'Screen Capturing... ' is displayed while the projector is processing the picture. Please wait.
4. If the action is successful, you see the message ‘Captured Succeeded’ on the screen. The captured picture is saved as MyScreen.
5. To view the captured picture displayed as the startup screen, set MyScreen in the SYSTEM SETUP: Basic > Splash Screen menu and restart the projector.

   - **Using the OSD menu**
     1. Press MENU/EXIT and then press </> until the SYSTEM SETUP: Basic menu is highlighted.
     2. Press ▼ to highlight MyScreen and press MODE/ENTER.
     3. Repeat steps 2-5 in the “Using the remote control” section to capture and view the captured picture.
In the unlikely event that the capturing action fails, change your target picture.

### Adjusting the sound

The sound adjustments made as below will have an effect on the projector speakers. Be sure you have made a correct connection to the projector audio input. See “Connection” on page 17 for how the audio input is connected.

#### Muting the sound
To temporarily turn off the sound:

1. Press MENU/EXIT and then press </> until the SYSTEM SETUP: Advanced menu is highlighted.
2. Press ▼ to highlight Audio Settings and press MODE/ENTER. The Audio Settings page is displayed.
3. Highlight Mute and press </> to select on.
   
   * If available, you can also press MUTE on the remote control to toggle projector audio between on and off.

#### Adjusting the sound level
To adjust the sound level, press VOLUME+/VOLUME- on the remote control, or:

1. Repeat steps 1-2 above.
2. Press ▼ to highlight Volume and press </> to select a desired sound level.

#### Adjusting the microphone volume
To adjust the microphone sound level, press MIC/VOL keys (+/-) on the remote control, or:

1. Repeat steps 1-2 above.
2. Press ▼ to highlight Microphone Volume and press </> to select a desired sound level.

#### Turning off the Power On/Off Ring Tone
To turn off the ring tone:

1. Repeat steps 1-2 above.
2. Press ▼ to highlight Power On/Off Ring Tone and press </> to select Off.

   * The only way to change Power On/Off Ring Tone is setting On or Off here. Setting the sound mute or changing the sound level will not affect the Power On/Off Ring Tone.
Presenting from a USB Reader

This feature displays a slide show of images stored on a USB flash drive connected to the projector. It can eliminate the need for a computer source.

Supported image formats:

- JPEG(JPG)
- PNG
- TIFF
- BMP
- GIF
- PDF

- Not all PDF files can be displayed.
- A square box will be displayed on the filename for unidentified characters.
- Thai filename is not supported.
- Files in GIF, TIFF, PNG and BMP formats can be displayed for the file size smaller than WXGA (1280 x 800) only.
- If a folder consists of more than 200 photos, only the first 200 photos can be displayed.

To view your pictures as a slide show, follow these steps:
1. Plug the USB flash drive into the USB TYPE-A jack of the projector.
2. The projector automatically displays the thumbnails. Or you can manually select USB Reader from the source selection bar.

When viewing thumbnails

Setting page
You can adjust the file order and Slideshow settings. When you are done, press OK to save the settings or press Cancel to ignore the change.

Shutting down the projector

1. Press POWER or OFF, and a confirmation message will be displayed prompting you. If you don’t respond in a few seconds, the message will disappear.
2. Press POWER or OFF a second time. The POWER indicator light flashes orange, the light source shuts down.
3. A "Power Off Ring Tone" will be heard. The POWER indicator light is a steady orange and fans stop. Disconnect the power cord from the power outlet.

- To turn off the power ring tone, see "Turning off the Power On/Off Ring Tone" on page 36 for details.
- Light source life results will vary depending on environmental conditions and usage.

Direct power off
The AC power cord can be pulled out right after the projector is turned off.
Menu operation

Menu system

Equivalent Light Source Hour  
Displays the number of hours the light source has been used.  
Firmware Version  
Shows the firmware version of your projector. |
Maintenance

Care of the projector

Your projector needs little maintenance. The only thing you need to do on a regular basis is to keep the lens and case clean.

Never remove any parts of the projector. Contact your dealer if any part needs replacing.

Cleaning the lens

Clean the lens whenever you notice dirt or dust on the surface.

- Use a canister of compressed air to remove dust.
- If there is dirt or smears, use lens-cleaning paper or moisten a soft cloth with lens cleaner and gently wipe the lens surface.
- Never use any type of abrasive pad, alkaline/acid cleaner, scouring powder, or volatile solvent, such as alcohol, benzene, thinner or insecticide. Using such materials or maintaining prolonged contact with rubber or vinyl materials may result in damage to the projector surface and cabinet material.

Cleaning the projector case

Before you clean the case, turn the projector off using the proper shutdown procedure as described in "Shutting down the projector" on page 38 and unplug the power cord.

- To remove dirt or dust, wipe the case with a soft, lint-free cloth.
- To remove stubborn dirt or stains, moisten a soft cloth with water and a neutral pH detergent. Then wipe the case.

⚠️ Never use wax, alcohol, benzene, thinner or other chemical detergents. These can damage the case.

Storing the projector

If you need to store the projector for an extended time, please follow the instructions below:

- Make sure the temperature and humidity of the storage area are within the recommended range for the projector. Please refer to "Specifications" on page 53 or consult your dealer about the range.
- Retract the adjuster feet.
- Remove the batteries from the remote control.
- Pack the projector in its original packing or equivalent.

Transporting the projector

It is recommended that you ship the projector with its original packing or equivalent. When you carry the projector yourself, please use the original box or equivalent.
Light source information

Getting to know the light source hour

When the projector is in operation, the duration (in hours) of light source usage is automatically calculated by the built-in timer.

To obtain the light source hour information:

1. Press MENU/EXIT and then press << /> to highlight the SYSTEM SETUP: Advanced menu.
2. Press ▼ to highlight Light Source Adjustments and press MODE/ENTER. The Light Source Adjustments page is displayed.
3. You will see the Equivalent Light Source Hour information appearing on the menu.
4. To leave the menu, press MENU/EXIT.

You can also get the light source hour information on the INFORMATION menu.

Extending light source life

The light source is a consumable item that normally can last up to 10000-20000 hours with proper usage. To keep the light source life as long as possible, you can do the following settings via the OSD menu.

• Setting Light Source Mode Selection as Economic

Using Economic mode reduces system noise and power consumption by 20%. If the Economic mode is selected, the light output will be reduced and result in darker projected pictures.

Setting the projector in Economic mode also extends the light source operation life. To set Economic mode, go into the SYSTEM SETUP: Advanced > Light Source Adjustments > Light Source Mode Selection menu and press << / >>.

• Setting Auto Power Off

This function allows the projector to turn off automatically if no input signal is detected after a set period of time to prevent unnecessary waste of light source life.

To set Auto Power Off, go into the SYSTEM SETUP: Basic > Operation Settings > Auto Power Off menu and press << / >>. The time period can be set from 5 to 30 minutes in 5-minute increments. If the preset time lengths are not suitable for your presentation, select Disable. The projector will not automatically shut down in a certain time period.
Timing of replacing the light source

When the Light indicator lights up red or a message appears suggesting it is time to replace the light source, please consult your dealer.

The following light source warning displays will remind you to change the light source.

<table>
<thead>
<tr>
<th>Status</th>
<th>Message</th>
</tr>
</thead>
</table>
| Install a new light source for optimal performance. If the projector is normally run with Economic selected (See "Getting to know the light source hour" on page 49), you may continue to operate the projector until the next hour light source warning appears. Press ENTER to dismiss the message. | **Notice**

Order Replacement Light Source

Light source=XXXX Hours

Please contact your dealer for replacing new light source.

OK |

It is strongly recommended that you replace the light source at this age. The light source is a consumable item. The light source brightness diminishes with use. This is normal light source behavior. You can replace the light source whenever you notice that the brightness level has significantly diminished. Press ENTER to dismiss the message. | **Notice**

Replace Light Source Soon

Light source=XXXX Hours

Please contact your dealer for replacing new light source.

OK |

The light source MUST be replaced before the projector will operate normally. Press ENTER to dismiss the message. | **WARNING**

Out of Light Source Usage Time

Please contact your dealer for replacing new light source.

OK |

"XXXX" shown in the above messages are numbers that vary depending on different models.

Replacing the light source

⚠️ Do not replace the light source by yourself. Please contact your dealer.

PC audio jack x 1

Control
RS-232 serial control
9 pin x 1
LAN control
RJ45 x 1
IR receiver x 2
12V trigger x 1 (Max. 1A)

Input terminals
Computer input
 RGB input
 D-Sub 15-pin (female) x 2
 Video signal input
 S-VIDEO
 Mini DIN 4-pin port x 1
 VIDEO
 RCA jack x 1
 SD/HDTV signal input
 Analog - Component RCA jack x 3
 (through RGB input)
 Digital - HDMI V1.3 x 1
 Audio signal input
 Audio in
 PC audio jack x 2
 RCA audio jack (L/R) x 2
 Microphone x 1
 USB ports (Type-A x 2; Mini-B x 1)

Environmental Requirements
Operating temperature
0°C–40°C at sea level
Operating relative humidity
10%–90% (without condensation)
Operating altitude
0–1499 m at 0°C–35°C
1500–3000 m at 0°C–30°C (with High Altitude Mode on)
### Dimensions

393 mm (W) x 117 mm (H) x 298 mm (D)

### Wall mount installation

**Minimum installation requirements**

**LX60ST**

Minimum Ceiling Height (mm) = f + H + b + 60 + 274 + c

- The dimensions are based on the BenQ wall mount (P/N: 5J.J4R10.001).
- All measurements are approximate and may vary from the actual sizes. BenQ recommends that if you intend to permanently install the projector, you should physically test the projection size and distance using the actual projector in situ before you permanently install it, so as to make allowance for this projector’s optical characteristics. This will help you determine the exact mounting position so that it best suits your installation location.
- The dimensions supplied are offered as a guide only and may differ depending on several factors relating to any specific installation.
- The dimensions are based on the projector being configured with zero keystone correction.
- The dimensions assume that the wall mount arm is positioned 90° from the bottom case of projector and screen surface.

Ceiling mount screw:
M4 x 8 (Max L = 8 mm)
Unit: mm

Warranty and Copyright information

Limited warranty

BenQ warrants this product against any defects in material and workmanship, under normal usage and storage.

Proof of purchase date will be required with any warranty claim. In the event this product is found to be defective within the warranty period, BenQ's only obligation and your exclusive remedy shall be replacement of any defective parts (labor included). To obtain warranty service, immediately notify the dealer from which you purchased the product of any defects.

Important: The above warranty shall be void if the customer fails to operate the product in accordance with BenQ's written instructions, especially the ambient humidity must be in-between 10% and 90%, temperature in-between 0°C and 35°C, altitude lower than 4920 feet, and avoiding to operate the projector in a dusty environment. This warranty gives you specific legal rights, and you may have other rights which vary from country to country.
