The Cloud Service you can choose

To charge the projector
To Access Internet

Cable internet Connection

To plug in the USB-LAN adaptor to the USB port, and to plug in the Ethernet cable.
To check the network status:
Click the (WIFI) icon on the second page, then select the Network Setting, and then Cable Connection. There in the information window, there is “Network Connection succeed” information with IP address.

Please be noted that: the USB-LAN adaptor is not standard accessory. It need to be purchased separately.

WiFi Wireless Connection

To click the WiFi icon on the desktop, there is network setting menu. To see the below information.

To turn on the WiFi switch, there is the list of all the SSID and hotspots. To select and to input the WiFi password, and to confirm. Soon this projector can access internet.
Note: To operate the projector with an USB mouse, will be very convenient.

The WIFI information, network speed, IP address will be shown in the information menu. If the network speed is low, pls check the network and router. Please be noted that low network speed will cause poor experience when playing online videos.

To set the hotspot, Projector Hotspot and Phone/mobile Hotspot

1. To set the phone/mobile Hotspot?

To turn on the phone/Mobile Hotspot function of your smart mobile phone, and to set the hotspot name and password, your projector and other devices can access internet through your mobile phone.

*Please be noted that, Apple iPhone and Android smart phone, have such hotspot functions, but the setting methods are different.
2. To set the Projector Hotspot

To click the WiFi icon, there is network setting menu. To click the hotspot function, and to turn on this function, there is the default name: AndroidAP and password:******. You can reset the hotspot name and password for your convenience.

There is one option “to show the password” on the menu.

To click the “confirm” to save your settings.
To customize some icons on the desktop

You can customize the online videos. To set it according to your likes by the following steps:

To add APPs/APKs

To move the mouse, or the cursors with the touch keypad, to the online videos, there are some icons shown. To click it, there will be a popup menu with all the APPs/APKs listed in the window. Just to choose your favorite and click it, this APP/APK will be listed at the position of . Surely, this icon will be replaced with new APP/APK icon.

To remove the APK from your customization

To remove the APP/APK with the mouse

You may need to cancel or remove your customized APP/APK, just to move the mouse cursor to the exact top right corner of the icon, for example. There will be a . To click this Red Cross, to remove it from your customized menu.

To remove the APP/APK with the top keypad

To move the cursor onto the APP/APK icon, and to press the menu button, there will
be popup menu. To choose YES/confirm to remove the APP/APK from your customization.

Please be noted that: the above operation can only cancel/remove the shortcuts of those APP/APK, but not to uninstall it. If you want to uninstall this APP/APK, please refer to “application management” for more information.

**To Watch Video Online**

a) To access the internet. Please refer to chapter”To access the internet”

b) To click the icons in the online videos, to choose the video APP/APK, for example.

c). If there is no video APP/APK, you can go to the website to download and install it on the projector, or you can go to the google play market to download the video APP/APK.

* Note: Now google play and youtube is not available on this version.

**To play the popular APPs/APKs**

**To install the APPs/APKs**

To access the internet. Please refer to chapter”To access the internet”

To Select the App Store, there is many choices, such as the Movies/ Games/ Software/ Tools etc. To select the APP/APK needed, to confirm to install it on the projector.
To Uninstall the APPs/APKs

a) To click the icon "All APPs", select , then select APPs, all the applications (APK/APP) will be shown in the menu.

To choose the APP/APK, for example, and to press the menu on the keypad, there will be a popup message, for example. To choose YES/confirm to uninstall this APP/APK.

b) To click the settings. To choose the sub-menu "manage the application". There in this submenu, all the applications are listed here. To click the APP/APK in this list, there will be a popup message. To choose the uninstallation option in the message to uninstall this APP/APK.

To project the mobile phone images

To project the mobile phone images is one of the most interesting function that Q6 supports. This technology is called Airplay by Apple, and iOS8.0 and above support this technology. Android mobile devices has similar technology, by the name of Miracast and DLNA. With Miracast, the images on the mobile devices can be displayed on the other devices. With DLNA technology, the videos and photos can be controlled and displayed on the other devices.

To project the mobile phone images, firstly you need to set the network, then to set your Apple iPhone or Android phone, and to activate your iPhone Airplay function, or your Android phone Miracast/DLNA function.
Network Settings for mobile phone projection

1. One Network for both mobile phone and projector

To set one lan network for both the mobile phone and projector, say, to connect mobile phone and projector with one internet router.

Note: Please refer to “To access internet” for more information.

2. Hotspot setting

To set the projector as the hotspot, and then to connect mobile phone to this hotspot by WiFi.
Or to set the mobile phone hotspot, and to connect projector to this mobile phone hotspot.

Please be noted that, in hotspot mode, the mobile phone and projector can not access internet by WiFi or cable Ethernet.

To refer to “To set the hotspot” for more information.
