

Roadster X6

Engineered for life on the road.

Christie's Roadster X6 is a powerhouse projector outputting a staggering 6000 ANSI lumens from its small frame by way of a 1200W Xenon CERMAX® illumination system and 3-chip DLP™ technology enabling you to take full advantage of the X6's digital capabilities. Fitted with a digital interface, the X6 can project a digital signal from source to screen without signal conversion. The X6 is the ideal choice for projecting HDTV and DTV images as they were intended.

All models in the Roadster series are fitted with Christie's proprietary Intelligent Lens System (ILS™) and LiteLOC™ feature. The former, a fully motorized lens system allows for the automatic recall of lens position and source parameters upon changing source, reducing set-up times and labor costs. The latter gives you full control of the X6's programmable power supply. Fitted with password protection - LiteLOC™ only permits the X6 to be used with the lamp mode you select.

Off-set and keystone capability combined with the system's functional, unobtrusive design and compact size makes it the ideal system for stacking solutions. The X6 can be easily flown via integrated fly-points or stacking rig.

The X6 also shares a common modular architecture with all the other models in the Roadster series and can be upgraded at only an incremental cost to deliver stunning true SXGA resolution images for those applications that combine both video and multimedia components.
