

PRO-1215

DLP® Laser-Phosphor Illumination System, 5000 ANSI, 4 lens options

Wolf Cinema's BluHD™ laser-phosphor illumination system permits years of trouble-free performance [20,000 hours to 50% output], without ever having to change out a lamp, or recalibrate the projector due to lamp degradation over time. The PRO-1215 delivers 5000 ANSI peak white performance – perfect for larger dedicated home cinema screens, or for those more challenging higher-ambient lighting room areas. Deep native contrast performance and excellent color balance creates a great image, no matter the source. Four sets of primary optics with ample H+V offset capabilities permit placement up to and well beyond 5X screen width, making the system quite suitable for screens up to 16' [~5m] wide. IR, RS232 and RJ45 capabilities facilitate easy integration with today's leading control systems.
