

H-PAD SCREEN AND FRAME SYSTEM

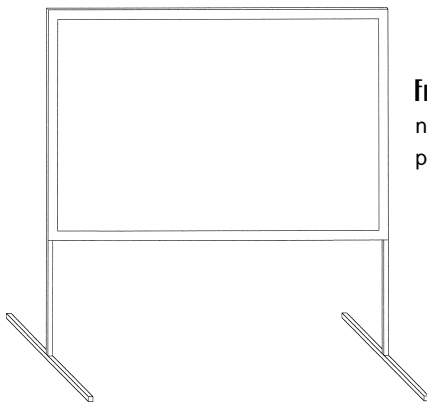

Hurley Screen's H-Pad screen and frame system is our most versatile product. Whether it is for a home, classroom, or office, you can achieve a true cinema quality presentation with our permanently tensioned H-pad system. The H-pad System is available in all of Hurley Screen's surfaces including our rear projection surface, Thruview B.

We at Hurley Screen believe that every customer deserves a custom solution. The H-pad system is a custom screen and frame system without the custom price. The system can be manufactured in virtually any size, *flat* or *curved* and can be manufactured with a *truss style* or *free standing* frame. Permanent or adjustable legs are available. It is also offered with a *keystone elimination tilt system* with either manual or motorized operation. The H-pad system has a variety of installation methods, including wall mount and suspended with eye bolts.

This unique system is constructed of one inch square aluminum tubing with steel core fittings. The H-pad is designed to be light weight and easy to assemble. The screen is mounted to the frame using Hurley Screen's H-pads which are attached behind the screen's black borders. Hurley Screen's H-pad makes it easy to adjust the screen surface to achieve a perfectly flat viewing surface and there are no unsightly snaps. Once the screen is mounted to the frame, the frame and all hardware are hidden behind this attractive finished product.

CURVED - to meet custom veiwing needs

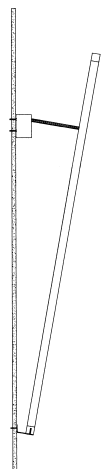

FREE STANDING - when the screen needs to be mobile, not permanently mounted

TRUSS FRAME - For larger screens that are not wall mounted

MANUAL OPERATION

MOTORIZED OPERATION
